Louis Funk, one of the leading farmers of the county, came in from his ranch near Fisher's Mill to Oregon City on business matters the latter part of the week.

G. H. Howell, foreman of the beater room at the Crown Willamette mill, was seriously hurt by the week while endeavoring to repair a motor. He is confined to his home in the care of physicians.

Emmett Dunn, son of the county treasurer, has been seriously hurt by a gasoline explosion at Golconda, Arizona.

Rev. George Nelson Edwards, after returning from a vacation at the seashore, left this week for Eugene, to attend a church conference. From here he will go to San Francisco to attend the Fair.

H. W. Koehler, city recorder of Oswego, was in the county seat during the week.

Dr. S. K. Spaulding, of Omaha, Neb., visited his nephew, C. C. Cochran, in the county seat during the week.

Mr. and Mrs. J. A. Tufts have returned from Wilhoit Springs to their home in Gladstone. Mr. Tufts, who was formerly county treasurer, is in poor health, and failed to find the relief at the springs that he had sought.

Mrs. Edna Swift spent the fore part of the week visiting friends in Oregon City, following an outing in Eastern Oregon. From here she went to her home in Portland.

George H. Standish and party, of Seattle, who have been touring in California and Southern Oregon, spent Wednesday in the county seat en route home.

Miss Mabel Harrison, of Kalama, spent several days this week in Oregon City visiting friends.

Mr. and Mrs. Bourne F. Davidson, of Baker, were among the week's visitors in the county seat, stopping over here to view the falls while on their way to Puget Sound resorts for their summer vacation.

Mr. and Mrs. Martin Christensen, and Mr. and Mrs. Joiner, who have been camping in the mountains for the past ten days, returned to Oregon City Monday.

Miss Rose Hass, of Maple Lane, returned to her home Tuesday from a two weeks' vacation.

Mr. and Mrs. Elmer Harris and daughters, the Misses Agnes, Esther and Helen Harris, of this city, leave Saturday for Bar View, Oregon, where they have rented a cottage. Miss Eva Dye accompanies them as their house guest.

Dr. Eckner, who has been critically ill for some months, is able to be out again.

Miss E. Ethel Davies left Saturday for Bar View, Ore., where she will be a guest of Mrs. Thomas Warner and daughter, Miss Bess.

Mr. and Mrs. Duane Ely, accompanied by friends, were Wilhoit Spring visitors Sunday.

Mrs. Cook went to Salem Thursday to consult a specialist in regard to the illness of their little baby daughter, who has been ill for some time.

Miss Florence and Marian White, of this city, leave Saturday afternoon for Lake Lytle, Ore., where they will be guests at the beach cottage of Mr. Fred White and daughter, Miss Jean.

Ab Dillman returned Thursday from California. Mr. Dillman expects to return in a few weeks, accompanied by Wm. Shannon, where they have located a very promising gold mine.

Mrs. Beach has recovered from her recent illness at the home of her parents, Mr. and Mrs. George Reddaway.

Ted Miller, of this city, will leave for Spirit Lake, Wash., Monday. He will be one of a party of Y. M. C. A. boys to make the trip.

Mr. and Mrs. Young, of the Seventh St. Bakery, left for Camas, Sunday to visit their son and family.

Mr. Young returned to Oregon City Tuesday, Mrs. Young remaining, with the intention of staying until Sunday. J. J. Eger was a Portland visitor Sunday.

MORE ABOUT ROADS

Chapman's "Oregon Voter" Makes Some Remarks on Usual Plan

In C. C. Chapman's "Oregon Voter" for July 24 are some interesting remarks about the scheme usually followed hereabout in building the things they call roads. Mr. Chapman ought to know what he is talking about, for he has been, perforce, a close observer of road-building in Oregon for some time. He says:

"In many road districts work is done honestly. Here is the method: 'The district holds its meeting and levies the tax—sometimes as high as a 10-mill tax.

"Every person at the meeting knows that wages will be paid for teams and horses in that district, and that residents of the district will be employed.

"When the time comes for the supervisor to give out the work, he gives it out in sufficient quantity to different residents to enable them to get enough cash money to at least pay their entire taxes—not only road tax but all other taxes as well.

"Often there is enough work for men and teams to permit all the resident taxpayers to get back enough money to pay their whole tax bills.

"If there isn't enough work to go around, the resident who doesn't stand well with the supervisor or with the neighborhood isn't given any work. But the rule is to take care of everybody living in the district.

"The non-resident taxpayer, especially the timber owner, isn't around to get his bit of work, so he has to pay his entire tax in cash or lose his property. In many districts, the taxes paid by non-residents amounts to more than the taxes paid by residents, so in effect it amounts to the non-residents paying all the taxes of the whole district.

"This might not be so vicious if the work on the road was well done. But in a neighborhood where the men talk war and take it easy. Every now and then there is a spurt of real work, and then there is more war talk.

"I have watched road work in nearly every county of Oregon, and I can vouch for the fact that in instance after instance under the road district plan the men on the work loaf at least half the time, and by their easy work get enough wages to pay their taxes."

Do you know that the Courier job printing department is equipped to do any and all kinds of work?

"LIFT" STILL PUZZLE

City Engineer Working on Problem of Operating Elevator

After consulting leading elevator authorities in the Northwest, and having written to water departments in a dozen cities, City Engineer Miller is of the opinion that it will be possible to operate the municipal elevator with hydraulic power from the city mains; but adds that such operation will throw a heavy strain upon the pipes. In order to avoid possible breaks and blow-outs, he thinks direct connection should be made with one of the large mains—possibly with the heavier service pipe that will furnish water to West Linn from the new city reservoir.

In connection with even this system of piping Mr. Miller thinks that adequate safe-guards in the line of pressure valves should be provided, and may even suggest to the council that a special form of pipe be used. He will probably submit a report to the council on the matter at the first regular August meeting—to be held August 4th.

Efforts of the city to operate the elevator will be pushed with all speed, but it is not the intention of the council to permit the elevator in any way to jeopardize the distributing system.

We make a specialty on printing classy and up-to-the-minute job print ing—come in and take notice; Courier

ROAD IS CLOSED

Route from Milwaukie to Sellwood to be Patched Up Again

In an effort to make the "improved" road from Milwaukie to Sellwood passable to traffic, the county has ordered this highway closed for two weeks while repairs are made. The mountain ranges will be removed from the present road, the surface of the highway brought to grade, and a coating of asphaltum put on. It is hoped that this will make the road suitable for traffic.

While the road is closed teams and automobiles between points on the east side of the river and Portland have to go round by way of Ardenwald and Willsburg, or else in over the Grays Crossing route. The Milwaukie cut-off road was "improved" last spring at a cost of over \$10,000.

TAX CHANGE FAVORED

Washington Grange Passes Resolution and Re-elects Officer

Farmers of the State of Washington have been studying taxation questions and at the annual meeting in Centralia, of the State Grange, the following resolution was passed:

"That we go on record as favoring the adoption of a system of taxation whereby personal property and all improvements would be exempt from taxation and the burden be borne entirely by land values."

The Grange re-elected, by a big majority, C. B. Kegley as State Master, who has long held that position, and under whose administration the organization has been devoted to the interest of working farmers, in preference to privileged corporations.

Let us figure on your printing—Courier.

Squaring the Account.

The Central Law Journal says that a Philadelphia tailor was shocked over the size of the bill rendered by a lawyer he engaged to sue a customer, and later when the lawyer brought a suit of clothes the tailor retaliated by sending him a bill in the following legal terms: "To measuring and taking order for one suit, \$4.50; warrant and instructions to foreman for executing same, \$3.35; going twice to cloth merchant, \$2.25; fees to cloth merchant, \$35; cutting the cloth, \$8.75; materials for working, \$5.50; sundries for working, \$9; trying on of the suit, \$2.75; alterations and amendments, \$4.50; entering transaction in day book, \$2; posting same in ledger, \$2; engrossing same, \$3.50; writing to the button dealer, \$1.25; filling his declaration—eight sheets, \$8; fees to button merchant, \$0.75; removing the suit by certiorari to your residence, \$2.25; writing receipt, \$1.75; filling same, \$12.25; service of same, \$1.50; ditto, \$1.50; total, \$100.25."

Climate Variety in Chile.

Chile has a coast line of 2,000 miles and the breadth of the country varies from only 100 to 250 miles. The crest of the Andes marks the eastern boundary and the Pacific ocean the western. The coast chain and the principal cordillera of the Andes traverse the country longitudinally. Between them lies the central valley, the great agricultural section of the country. In the north are the arid deserts which contain the altiplano. In the south is the Chiloe archipelago and the mainland where the rains are frequent and constant. The long stretch of coast and the variations due to the mountain chains afford every variety of climate, but the greater section of the country may be said to have a temperate climate. The mineral resources are the natural wealth which furnish the major part of the purchasing power.—New York Sun.

Did She Say It?

The fair maid gnawed fiercely at the handle of her pen. Then she bent again over the sheet of note paper and wrote rapidly.

"You are no gentleman," the letter ran, "if you think I said such a thing as she said you said I had said."

Next day came the reply. "Dear girl," wrote the man—"You must not think I think you think you must be that kind of girl I think you must be if you said such a thing as you said she said I said you said you had said."

It seems he knew she knew he knew she said just what she said he heard him say he had heard her say, but, with infinite feminine tact, she accepted his apology.—London Mail.

The Bore.

Some student of the relatively unimportant but nevertheless entertaining side lines of literary history has been investigating the origin of the term by which we characterize the man who habitually blockades the channels of agreeable human intercourse. He has decided that the word "bore" made its first appearance in the letters of Lord Carlisle and of Selwyn, but that they used it with reference not to a creature, but to a state or condition. Thus in 1767 Carlisle wrote: "I enclose a package of letters, which, if they are French, the Lord deliver you from the bore." It was not until the beginning of the last century that the word was applied to the person who wears and worries.—Boston Herald.

Why Steam Casts a Shadow.

Why does water cast no shadow, while steam, which is invisible, does cast a shadow? Pure water in a state of rest is of uniform density, and the rays of light, although they may be refracted, pass through it almost unimpeded in parallel lines. Steam is composed of vapor of different degrees of density, intermingled usually with some air, so that the rays of light entering it are not uniformly refracted and therefore interfere with and neutralize each other to a considerable degree, as counter or cross waves strike each other down and tend to create a smooth sea.—Chicago Herald.

The Sextant.

The sextant, an instrument which has been so necessary to polar exploration, was used by Arabian astronomers as far back as 965. The Arabian instrument had a radius of fifty-nine feet nine inches. The modern instrument, which is small enough to be conveniently held in the hand, was invented in 1730 by Thomas Godfrey of Philadelphia and Captain Hadley of the British navy.

Just For Tonight.

"My dear, do me a favor tonight, will you?" "Certainly. What is it?" "When we are dining with the Browns kindly refrain from calling my attention to how beautifully Mr. Brown carves."—Detroit Free Press.

Myth of the Red Rose.

The Greeks held that the red rose derived its color from the blood of Venus when she trod on a thorn of the white rose while going to the assistance of the dying Adonis.

The Perfect Cure.

Mother—Ella, what has happened to your doll? Ella—The doctor says it's nervous breakdown, and he has prescribed mud-lage.—Judge.

One Way.

Young Catch—I don't know how to take that girl. Old Batch—Hain't you thought of your arms?—Browning's Magazine.

Boy Is Hurt

Falling from a springboard while swimming in the Tualatin river last week, Arthur Rogers, 13 years old, the son of Mr. and Mrs. G. H. Rogers of Willamette, broke his left arm just below the shoulder. The boy was taken to the Oregon City hospital, where he was placed under the care of Dr. Mount. An X-ray photograph of the fracture was taken to aid in a correct setting.

WHY WE CAN'T FLY

The Reason Man Is Unable to Rise In the Air Like a Bird.

HE LACKS THE BREASTBONE.

In the Bird It Is Very Massive and Developed Like the Keel of a Yacht, and Therein Lies the Secret of Its Enormous Wing Power.

Man has always longed to fly like a bird, and all the ancient attempts at flight were based upon the flapping of wings attached to human arms.

These efforts were given up long ago when it was realized that man was not and could not be strong enough to sustain himself in the air by the use of his arms. A man can only just lift himself with his arms—chinning the bar, for example—but he finds himself pretty heavy after he has done it a few times.

The reason why no man will ever be able to fly with self moved wings is that his breastbone is not big enough. A bird's breastbone has along its middle a deep keel, from which spring the enormous muscles that draw down the wings when flapping or hold them level when soaring, the muscles, in other words, that support the entire weight of the bird.

The most powerful fliers have the deepest breastbones. Look at the skeleton of an albatross, a condor or a humming bird in a museum and you will notice that the keel of its breastbone projects like the keel of a racing yacht.

You can see this keel, only much smaller in proportion to the size of the bird, on the carcass of any chicken or turkey after the meat has been removed, and the tender white flesh from the breast is nothing but the muscles with which the bird flew when alive.

You notice that even on a chicken, which is one of the weakest of fliers, this flesh forms the greater part of the body. On a humming bird there is little else but this mass of flying muscle. In other words, the humming bird is nothing but a tiny flying machine.

An albatross has a vast spread of wings, and its small body is little else but a pair of powerful pectoral muscles. These are attached by tendons to the bone called the humerus, which is the counterpart of the upper arm bone of a man. They spread out like a solid fan and are, fastened to the breastbone with its deep keel, to the clavicles, or "wishbone," and to the ribs.

A man's breastbone has no keel. His humerus, or upper arm bone, is hinged to the clavicle, or collarbone, and shoulder blade. His pectoral muscles, which move the arm forward, and deltoid muscles, which lift it, are attached to it by strong tendons and spread fanlike over his upper chest, being inserted in the ribs and collarbone. These are the muscles that do the same work for man as the pectoral muscles do for a bird. These are the muscles on which he would have to rely if he were to fasten wings to his arms and try to fly.

Compare these muscles with those of an albatross and you will see how inadequate they are. Though an albatross weighs only a few pounds, it has pectoral muscles that are actually larger than those of the most powerful athlete.

In order to have muscles powerful enough to lift his weight in the air by flapping wings a man's breastbone would have to develop a keel like a bird's and his collar bone would have to be changed to a giant "wishbone."

Some writer on aviation has calculated that this keel and "wishbone" would have to project at least six feet in order to furnish attachment for the necessary muscles, for man in proportion to his size is far heavier than an albatross. This bird has small and very light legs, whereas man's legs are solid and heavy. The albatross' long wing bones are hollow tubes.

This makes it plain why experimenters in flying long ago gave up the idea of self moved wings and flight like that of a bird.—San Francisco Chronicle.

Curing a Fibber.

While a writer was passing a New England schoolhouse a boy came out and began pulling down the flag—a strange proceeding, since it was not storming nor was it time for the school to be dismissed. The writer was curious and entered the schoolhouse to inquire the reason. The teacher pointed to a boy who was trying to hide behind his desk, and said, "Charlie, there, has told a lie, and the flag has to come down, for Old Glory stands for truth and must not wave over a school with a liar in it."—Exchange.

METHOD.

Method is the very hinge of business, and there is no method without punctuality. Punctuality is important because it subserves the peace and good temper of a family. Calmness of mind, which it produces, is another advantage of punctuality. A disorderly man is always in a hurry. He has no time to speak to you because he is going elsewhere, and when he gets there he is too late for his business or he must hurry away before he can finish it.

HOME FROM THE REXALL CONVENTION

WE ALWAYS FELT THAT THE 7,000 REXALL DRUGGISTS who compose the United Drug Co., was the greatest aggregation of merchandisers in the U. S., but now we know it. After three days spent at the Rexall National Convention at San Francisco we return home full of enthusiasm and good ideas for the improvement of our store and our store service; for guarding the quality of our drugs and for giving you more value for your money than in the past.

THE COMBINED PURCHASING AND MANUFACTURING POWER of 7,000 drug stores is enormous, running into many million dollars per annum, which enables a Rexall druggist to obtain drug store merchandise at lower prices. These savings we propose to pass on to our customers, either in reduced prices or increased values at the same price.

WE ARE PARTICULARLY ENTHUSIASTIC regarding the wonderful line of "Rexall Remedies." What other manufacturer dares to say on every bottle: "The United Drug Co. and The Rexall Store selling this preparation guarantee it to give satisfaction; if it does not, go back to the store where you bought it and get your money back. It belongs to you and we want you to have it."

THERE IS A REXALL REMEDY for every ill—not one remedy for everything—and every one is sold on the above plan. What do you think of the Rexall Policy?
