

CROOKED LAW.

Prohibits Some Kinds of Burglary; Permits Other Kinds That Are Worse

One first class carpenter in Clackamas county that I know has had no work for many months but cutting cordwood. I suppose there are many others enjoying similar prosperity. An able-bodied man can't average above a dollar a day cutting cordwood. It is a hard way of serving the Lord and supporting a family.

A few years ago this man had \$1300 in cash that he had saved out of his earnings. He was duped into buying a tract of uncleared land and paid the \$1300 an acre, as much more being still to pay.

It was represented to him that he could make a great fortune raising potatoes. There was some cleared land on the place; he cleared some more and put in potatoes—two years. He had good crops but could not get anything for them.

Result was he could not meet his payments—could not even pay the interest and the land, I suppose, has gone back to the party that sold it. The purchaser was thus robbed of \$1300 in cash besides two or three years hard labor. He had to go back to his trade to make a living. Now he can't get work at that.

This is not an isolated or exceptional case. It is typical of thousands, though the details are different in different cases. Since I have been in the country, over thirty years, this bunko game of unloading land on innocent purchasers at several times its actual value has been one of the leading industries, one of the most noteworthy "signs of prosperity."

And in the British dominions to the north the same game has been worked to the limit. If anyone could get a list of all the people who have been robbed in this manner from the Mexican line to British Columbia and from there all the way back to the Atlantic, it would represent an aggregate of loss suffering and ruin greater than that in Belgium. Thus does capitalism, even in times of what is called peace, wage war on innocent and inoffensive people. The man in this case is a widower with two children that he has been trying to keep in school. This is a typical illustration of the manner in which capitalist law protects the family and the home.

This game is worse than highway robbery, but it is carried on under cover of law and in the name of justice. Any man with soul so dead that he will work at this kind of business, ought to be buried. But not in consecrated ground, there ought to be dumps somewhere outside the walls, like the vale of Humorum Tophel where the rubbish of Jerusalem was buried.

In the case under consideration it would have been much nearer justice to have sold the land at auction for whatever it would bring and to have given back the purchaser his \$1300 and if there was anything left, give it to the guy that pulled the job. Even this would not pay to two years lost labor raising potatoes for nothing.

There is no remedy for such abuses and losses and disastrous ventures only a reorganization of the whole industrial and social system. That is what is coming and there won't be any rest for the wicked till it comes. Matters will continually get worse till the disease culminates in the utter collapse of the present industrial and social disorder.

J. L. JONES.

Playgrounds.

I do not know of any better way to teach a boy to be honorable and straight than to give him a chance to play with his comrades. In the playground he learns without any suggestion of rebellion against instruction and precept and preaching. He learns it because he does not want anybody else to cheat him and is "down" on the boy that does not play fair. And in the long run, because he is "down" on the boy that does not play fair, he will establish standards of conduct which we must maintain in the community and particularly in our great cities. If there is one thing that we need more than another it is the constant emphasis among our citizens of that spirit of fair play, that willingness to give and take, that generosity in defeat and that lack of assertiveness in victory which we identify with true sport and which is learned best of all in childhood upon the playground.—Justice Charles E. Hughes, United States supreme court.

Guiding Principles.

Equal and exact justice to all men, of whatever state or persuasion, religious or political; peace, commerce and honest friendship with all nations—enjoining alliances with none; the support of the state governments in all their rights, as the most competent administrations for our domestic concerns and the surest bulwarks against antirepublican tendencies; the preservation of the general government in its whole constitutional vigor as the sheet anchor of our peace at home and safety abroad; * * * freedom of religion; freedom of the press; freedom of person under the protection of the habeas corpus, and trial by juries impartially selected—these principles form the bright constellation which has gone before us and guided our steps through an age of revolution and reformation.—From first inaugural address of President Jefferson.

Old Time Butterscotch.

Put three pounds of light brown sugar in an enameled kettle with three-fourths of a pound of butter. Place over a moderate fire to melt; let it boil until thick, stirring all the while to prevent scorching. Take the kettle from the fire and pour the boiling hot liquid into buttered tins or upon a large flat most platter. When stiff enough mark off into big squares, and when cold break these apart and wrap each square in wax paper. Butterscotch carefully made will keep for months. It improves with age.

FOR SALE—110 Cords Seasoned Fir Wood at \$1.50 per cord—address C. E. Barney, Oregon City, Oregon.

FOREIGN HOP NEWS.

German and Austrian Crop Will Be Average in Spite of War.

Hop-growers of the Willamette valley are much concerned as to the effect the European war will have on the hop yield this year. Reports from England have indicated that the crop there would fall far short of the average; but reports from Germany and Austria, under date of June 28, seem to indicate that the continental yield will be about the same. W. J. Young, of the United States consular service, writing from Carlsbad, sends in the following information:

As compared with the hop acreage of 1914, that for this year in Austria-Hungary is estimated at from 12 to 15 per cent less, and the decrease for Germany at from 22 to 25 per cent.

By districts in Austria, the decreases run as follows: Saaz (Bohemia), 10 per cent; Auscha (Bohemia), 10 per cent; Styria, 18 per cent. Owing to war and lack of accurate information, estimates from Galicia are impossible. For Hungary the decrease is placed at 20 per cent. The combined acreage for Germany and Austria-Hungary is estimated at 40,000 hectares (practically, 100,000 acres).

It is not anticipated that this year's crop will decrease with the acreage, for not only have weather conditions so far been good and the vines grown well, but in decreasing the acreage, old plants were rooted out, while many new ones set out two years ago should this year bear well.

An intelligent crop forecast is not possible for another month. Besides dependence on the weather, the general desire this year to take advantage of all good ground for the planting of foodstuffs resulted, in the bulk of the hop gardens, in vegetables being planted between vines, and it is not yet known what effect this will have on the hops themselves. Former hop gardens have been planted with grain, potatoes, grass, and legumes.

COUNCIL IS BRAVE.

City Dads Defy Fate and Superstition in Meeting Date.

"Friday the thirteenth" has no terrors for Oregon City's council, which will meet on that date this week and try to do things for the benefit of the city. When the date of the special meeting was set as August 13, and when some of the council discovered that the day was also Friday, there was hesitation for a minute; but then Mr. Templeton said that he didn't think the council could have any special bad luck, so they stuck to the date.

But at that, "Friday the thirteenth" may be an unlucky day for some pet measures and plans, for the council is reported not to be in any too gentle a mood. Indications are that the "thirteenth" meetings will be well worth watching, and a banner crowd is expected.

Faulkner Divorce Filed.

Charging cruel and inhuman treatment, Mrs. Julia Faulkner has filed suit for divorce from Grover Faulkner. The defendant in the case is now out on bond, after having been arrested and extradited from Colorado on a complaint sworn to by his wife charging him with non-support. At the time Mr. Faulkner was brought back from Colorado by Deputy Sheriff Frost his child, whom he had taken east with him, was left with relatives in the Gem state. Since then, it is reported, Mrs. Faulkner has gone to Colorado, and through an order of the courts there has recovered custody of the child.

HYPNOTIZING ANIMALS.

Even the Deadly Cobra May Be Made Perfectly Passive.

Hypnotizing a hen is a trick known to most country boys. It is an old experiment, first described by the Jesuit father, Athanasius Kircher, who laid a hen on the table, held it firmly by a little white and drew a chalk line in front of its eyes, with the result that it remained as if in a catalepsy.

In India it is known that a cobra caught by the neck and gently pressed will soon become stiff and remain so for a considerable time either coiled up or on its stomach.

A frog fastened to a board and turned suddenly upside down goes into a trance. Other animals are susceptible to this treatment, some more quickly than others.

If you pick up a crab and wave it in the air it becomes motionless, a female bending her legs over her abdomen, a male sticking them out almost straight. The same is true of the fresh water crayfish, only this resists for a much longer time than a crab.

Among the insects cataplexy—commonly known as "death feigning"—is common, and, according to Professor Ernst Mangel, the learned German naturalist, is often a means of saving the life of the insect.

According to Mangel, the hypnotic condition is induced in man by suggestion or physical inhibition, in animals by mechanical inhibition, but in both cases sensory stimuli may assist. These stimuli may be optic (fixing the gaze on some object), or tactile (stroking the skin), or otherwise. Sometimes an absence of wanted stimuli may induce the state, as in the case of absolute silence.—St. Louis Post Dispatch.

Sheppard's Plaid.

Of course everybody knows the popular black and white check patterned cloth "sheppard's plaid," but ninety-nine people of every hundred ascribe the origin of this cognomen to some connection with the pastoral persona which is apparently indicated. Indeed, the description is generally written erroneously by tailors as "shepherd's plaid." Sheppard was the manufacturer who first introduced this fabric, and he exhibited his invention at the great exhibition of 1851.—London Scraps.

BRICK ROADS FAVORED.

Government Report Shows Growing Success of Material.

A rapid increase in the mileage of vitrified brick roads in this country is predicted in a new bulletin (No. 246) of the United States department of agriculture. Such roads possess distinct advantages—durability under all traffic conditions; afford easy traction and moderately good foothold for horses; and, third, easy to maintain and keep clean. However, they are expensive to construct.

The following formula is a rough guide for the probable expense of a brick road with a 6-inch concrete foundation and suitable grades: Cost per square yard, 1.90 L and 0.213 C and 0.138 S and 0.157 A and 0.040 B.

In this formula C equals cost of cement per barrel, S equals cost of sand per cubic yard, A equals cost of coarse aggregate per cubic yard, B equals cost of paving bricks per 1,000, and L equals cost of labor per hour. Thus, if labor costs 25 cents an hour, the labor cost per square yard of pavement will be 1.93 times 25 cents, or 48.25 cents. The cost of the cement per square yard will be 0.213 times the price of a barrel, and so on with the other items.

GOAT WEED BOTHERS.

Valley Farmers Find Old Pest Growing Amidst Crops.

The goat weed which is becoming such a pest in the meadows and pastures of the valley is known in the east as St. John's wort or herb John. This name was given to it by the peasants of France and Germany, who gather it in great quantities upon St. John's day and hang it in their windows as a charm against storm, thunder, and evil spirit. In Italy it is known as the "devil-chaser" as it is believed to scare away those who work in darkness by bringing to light their hidden deeds.

The best way to eradicate it is by thorough cultivation, with hoed crops, or by digging or mowing the plants before the seeds mature, and burning the cut plants, according to information from the plant expert at O. A. C.

LIGHT ON MOLALLA.

Aurora Observer Prints Gem From "Up Country" Community.

According to the Aurora Observer, George Miller, Southern Pacific agent at Aurora, can decipher almost anything that is written, from a county court report to a pay-check; but once in a while he gets surprising things to test his ability as a puzzle solver. Recently he got the following little note from a Molalla man:

Molalla, Ore., Youlie 29.

Dere Mr. Agant,

Aurore, Ore.

Haf you raicse sum Medison for me—it was shipped by Doctor curreall, if you no haf him perhaps he send to agent Camby or to dat oder feler Pook offf Pook who are agent Hubard town. I need dat Medison bad for my hed and stomake. Blesse anser and blige.

S. SEESABEL.

New Game Laws Proposed.

An eastern paper proposes the following revision of the federal game laws:

A new game law that should be passed by all the states would contain the following: Book agents may be shot between Oct. 1st and Sept. 1st; spring poets from Mar. 1st to June 1st; automobile speed demons from Jan. 1 to Jan. 1; road hogs from April 15 to April 15; amateur hunters from Sept. 1 to Feb. 1; war talkers no closed season; any man who accepts a paper for two years and then when the bill is presented says, "I never ordered it," may be killed on sight and shall be buried face down ward in quicklime so as to destroy the germs and to prevent the spread of the infection.

And They Didn't Exercise.

William M. Evaris, who lived until he was nearly ninety, said he kept his health by never taking exercise. The celebrated Dr. William George Mead, who lived to the surprising age of 148 years, spent nearly all of his time in the open air and played a little golf. Dr. Mead used to drink two or three quarts of water every day, and perhaps there is a suggestion in that. Old Dubois, who lived in Canada for the better part of 119 years on the north shore of Lake Erie, never worked and never took exercise. He spent seventy-five years of his life fishing with hook and line and ate nothing but baked apples and milk and brown bread and unsalted butter.

Culpepper's Remedies.

Old time physicians prescribed even more unsavory remedies than rancid butter, which was Emperor Menclik's cure for malarial fever. In "Culpepper's Herbs," published originally in 1656 and reprinted as recently as 1820, are such prescriptions as "oil wherein frogs have been sodden till all the flesh is off from their bones," "horse leeches burned into powder," "black soap and beaten ginger." Some of Culpepper's remedies are of a more practical nature. "If redhot gold be quenched in wine," he says, "and the wine drunk it cheers the vitals and cures the plague. Outwardly used it takes away spots and leprosy."

UNKINDNESS.

If we will remember unkindnesses it is well to begin with our own. Those we have received are not usually one sided, and the bitter words whose memory stings were seldom entirely without provocation. This at least is true: If, on examining our animosities and resentments, we find ourselves wholly blameless it will at once become easy to forgive.

A WONDROUS LAND

The Yellowstone Region as James Bridger Saw It.

AND HE WAS A TRUTHFUL MAN

His Adventure With an Elk at the Famous Obsidian Cliff and the Effect of a Ride Through Alum Creek—Story of the Mountain That Was Cursed.

As a teller of tales Munchausen had a worthy rival in James Bridger, the celebrated hunter, trader and guide, whose name and career are part of the pioneer history of the west. Bridger was thoroughly familiar with the region now comprised in the Yellowstone park as far back as 1830.

In his book, "The Yellowstone Park," the author, Hiram Martin Chittenden, brigadier general United States army, retired, sets down some of the yarns Bridger told about that land of wonders. Many of the Yellowstone country tales ascribed to Bridger have survived to this day, probably because they have never been capped. The first story General Chittenden tells relates to the celebrated Obsidian cliff, a mass of black volcanic glass with which all the tourists are familiar. Its discovery by Bridger was the result of a hunting trip, and it happened in this way:

"Coming one day in sight of a magnificent elk, he took careful aim at the unsuspecting animal and fired. To his amazement the elk not only was not wounded, but seemed not to have heard the noise of the rifle. Bridger drew considerably nearer and gave the elk the benefit of his most deliberate aim, but with the same result as before. A third and fourth effort met with similar fate. Utterly exasperated, he seized his rifle by the barrel, resolved to use it as a club, since it had failed as a firearm. Rushing madly toward the elk, he suddenly crashed into an immovable vertical wall which proved to be a mountain of perfectly transparent glass, on the further side of which, still in peaceful security, the elk was quietly grazing.

"Stranger still, the mountain was not only of pure glass, but was a perfect telescope lens, and whereas the elk seemed but a few yards off, it was in reality twenty-five miles away."

Another of Bridger's discoveries was an ice cold spring near the summit of a lofty mountain, the water from which flowed down over a long, smooth slope, where it acquired such velocity that it was boiling hot when it reached the bottom. This, a later investigator of the Firehole river found, was a case in which a hot spring discharged into the river bed.

Alum creek, a tributary of the Yellowstone, received its name from an accidental discovery by Bridger. One day he forded the creek and rode out several miles and back. He noticed that the return journey was only a small fraction of the distance going and that his horse's feet had shrunk to mere points which sank into the solid ground so that the animal could scarcely hobble along. Seeking the cause, he found it to be in the astringent qualities of the water, which was saturated with alum to such an extent that it had power to pucker distance itself.

Bridger also found a fine place to fish. "Somewhere along the shore an immense boiling spring discharges its overflow directly into the lake. The specific gravity of the water is less than that of the lake, owing to the expansive action of heat, and it floats in a stratum of three or four feet thick upon the cold water underneath. When Bridger was in need of fish it was to this place that he went. Through the hot upper stratum he let fall his bait to the subaqueous habitable zone and, having hooked his victim, cooked him on the way out!"

The visitor to the region of petrifications in the northeast corner of the park and to various points in the hot springs districts will have no difficulty in discovering the base material out of which Bridger contrived the following picturesque yarn:

"A mountain in the park was once cursed by a great medicine man of the Crow nation. Everything on the mountain at the time of this dire event became instantly petrified and has remained so ever since. All forms of life are standing about in stone where they were suddenly caught by the petrifying influences, even as the inhabitants of ancient Pompeii were surprised by the ashes of Vesuvius. Sagebrush, grass, prairie fowls, antelope, elk and bears may there be seen as perfect as in actual life. Dashing torrents and the spray mist from them stand forth in arrested motion as if carved from rock by a sculptor's chisel. Even flowers are blooming in colors of crystal, and birds soar with wings spread in motionless flight, while the air floats with music and perfumes siliceous, and the sun and moon shine with petrified light!" It is denied, though, that Bridger was responsible for the story that even the laws of gravitation were petrified in the region.

Uncontrollable Curiosity.

"I don't see how it is that Mrs. Jorg has so many friends. She gossips terribly." "Yes," replied Miss Cayenne. "Everybody seems willing to take a chance on being talked about for the sake of hearing what she says about the others."—Washington Star.

There is only one sort of shabbiness that matters—a shabbiness of the soul.—Edwin Pugh.

Startling News.

The Clackamas river trail looks like an Estacada business street these days, there are about forty of the local men working nearby, and with the number of local campers, the traveler meets many familiar faces. One shepherd near Clackamas lake said he was going to move on to more isolated parts, for the mountains were getting too darned civilized, as he had seen three women near his camp within sixty days.—(Estacada Progress.)

ENGLISH WOMEN AID IN THE WAR

"Votes Now Forgotten," Says Mrs. Pankhurst.

FIFTY THOUSAND IN PARADE

Government to Accept All Ready For Service—National Register Will Be Taken—Crime For Men to Be Done Work of Women, Says Suffrage Leader.

London.—Fifty thousand women of England, accompanied by seventy-five brass bands and dressed in red, white and blue, the colors of the union jack and France, paraded from the Thames to Trafalgar square to demonstrate their desire to be enlisted in the services of their country in factories supplying war material. There was a remarkable scene when the minister of munitions, accompanied by Mrs. Emmeline Pankhurst, the suffragist leader, appeared on a platform overlooking the embankment along which the procession made its way.

Mrs. Pankhurst placed before Lloyd George figures to show that 40 per cent of the munition workers in Ger-

Photo by American Press Association. MRS. EMMELINE PANKHURST.

many are women and that 75 per cent of all food canned for the German army is tinned by women.

"Our fight for votes for women is a forgotten issue in the national crisis," said Mrs. Pankhurst. "We are willing to 'do our bit' for England by taking our place in the factories and releasing men for the trenches. We are willing to do any work the government may assign to us, day or night."

The minister of munitions told the delegation of women that something like 50,000 women already were working at various factories in the production of munitions. It was not a question of competition between male and female labor, he said, but of getting men and women to work together to help the country.

The first thing, continued Mr. Lloyd George, was to get an adequate supply of machinery and tools, and the government was assuming the control of all machine and tool making establishments in the country. Women who came forward to serve must give their whole time. There must be real national organization for all women who were prepared to take up munition work.

Secondly, added the minister, there must be a sufficient number of women trained to direct and instruct others. In regard to wages, women would be paid the same piece rate as men, and all establishments would be under government control, while the government would see that there was no "sweated" labor.

WARNED BY MORGAN CASE.

Du Ponts Will Sell Explosives Only to Known Persons.

Philadelphia.—As a direct result of the shooting of J. Pierpont Morgan, the Du Pont Powder company of Wilmington, Del., issued orders to all its employees to sell explosives only to customers concerning whose identity they are certain.

The order applies to thousands of clerks, salesmen, managers of branch offices and keepers of magazines throughout the country and marks the first step taken by any of the great ammunition concerns to prevent their products falling into the hands of irresponsible persons.

Kills Snake and a Boy.

Yreka, Cal.—A half dead rattlesnake made a spasmodic attempt to coil when Mrs. Johnson Ahlgren, who had shot it, drew near with a party of children, at Somsbar, Siskiyou county, and everybody ran. In the flight Mrs. Ahlgren's revolver was discharged accidentally and Roy Donahue, eight, was shot through the back and killed.

Discusses Wedding: Dies.

New York.—Two hours after taking a headache powder Miss Reba Becker, eighteen years old, of 1727 Park place, Brooklyn, dropped dead. She was telling relatives at the time of her approaching wedding.

HOW SUBMARINE SANK TRANSPORT

British Commander Gave Correspondent Time to Get Off.

HELPED SAVE ENTIRE CREW

Firing of Torpedo Delayed Several Times by Officer Who Was "Glad to Meet" a Chicago Newspaper Man. The E-11 After Firing at the Nagara Stole Out of the Sea of Marmora.

The 600 ton freight ship Nagara was sunk by the British submarine E-11 in the sea of Marmora the other day. The crew was saved.

"The Nagara, a tidy little freighter, was lying off the Galata pier awaiting sailing orders when I made her acquaintance," says the correspondent of the Chicago Daily News. "I flourished my Turkish pass before the eyes of the captain to prove my right to accompany him to Chanak Kalessi."

After telling of his fear during the first night of the trip the correspondent continues:

"Ping" came the sound of a peculiar explosion.

We could not see the submarine from our shelter, but several times we heard that ominous "Ping."

We were huddled there for perhaps five minutes, though it seemed an hour. Our fear was not of death, but of the unknown. What was it like, this horrible torpedoing? Was there a chance of escape? The anguish of suspense was terrible.

Finally our boat stopped. The lieutenant leaped over the bridge and called on me to conduct in English whatever conversation was necessary. By that time the submarine had glided to a position about fifty yards away, directly beside us. One of the men on her was shouting unintelligibly. I ran to the rail.

"Have we time to get into the boats?" I yelled. Then I clearly and gratefully heard:

"Yes, but you had better be quick about it!"

Lifeboat Is Quickly Swamped.

Electrically the scramble began. The boat in front of me was splashed into the water prows first. I swung out by the ropes and was halfway down before I noticed that the boat had swamped and one man was sitting in her frantically bailing with his fez.

"Wait a minute!" I shouted to the submarine, waving my arm like a brakeman signaling his engineer to stop. The commander of the submarine responded with the same signal, and I went back to help with the boat. It lasted an eternity, and I returned to the rail to ask an extension of time. "Can you wait a minute?" I shouted again.

"Yes," he said quietly, "I shall give you time."

"Glad to Meet You," Is the Word.

With a landlubber's conceit I thought he was interested in me, so I introduced myself, adding, with an excusable flourish, that I was charmed to make his acquaintance. He bowed and said: "I am glad to meet you," as though the acquaintance of a correspondent of the Chicago Daily News thus made upon the sea of Marmora was the attainment of a long social ambition.

"But what ship is that?" he insisted.

"The Nagara."

"Where bound?"

"Chanak."

"What have you on board, supplies?"

"I am only a newspaper correspondent," I said apologetically, "and can't be expected to know the cargo the ship carries."

"What are those sailors, marines?"

"I don't believe so. This is only an ordinary freight steamer."

"Better Steer to That Boat."

"You'd better see to that last boat," called the blond lieutenant, "or she'll be swamped too."

The sailors had the boat at last swung loose, but were taking care, so I went hunting for a rope.

"Never in a do the rope," said the lieutenant. "Your boat is launched. Better get in."

I thanked him, saluted the other four on the submarine, who waved their hands good naturedly, and went to the rail.

How the Vessel Was Sunk.

The E-11 was gliding away, the blond lieutenant at the wheel slowly cranking as though it were an automobile. He directed his ugly craft about 150 yards off.

The Nagara lay lifeless. The men on the submarine were watching her intently. None of us stirred. Suddenly the Nagara burst open, the entire midship unfolded powerfully and a mass of orange smoke rolled upward, intersected by darting flames. The report, somewhat muffled, followed. Burning timbers showered into the water. The ship began sinking quickly. In half a minute the stern disappeared. The prow turned skyward and slipped rapidly under water. The orange cloud of smoke hung over the place where a minute before the Nagara had lain. The submarine likewise slipped under the water with demonic magic, and we with our three boats were left alone on the sea of Marmora, we and the orange cloud—and a distant line of black smoke which evidently had urged the blond lieutenant to expend a torpedo and disappear. It was a Turkish destroyer.
