

HINTS ON ALFALFA

Increasing Use of Fodder-Plant in County Is Noted

Since many ranchers in the southern section of Clackamas county, and in other parts of the main Willamette Valley, have discovered that alfalfa can be successfully grown in spite of the moist climate; the following hints on the culture of the great fodder-plant may not be out of place. They are furnished by Prof. Thomas Shaw, of the Great Northern staff.

"No one method of growing alfalfa in the Northwest will prove the best for every part of the same, owing to the great difference in the soil and climatic conditions present in different areas. There are certain general principles, however, that will hold good practically in all parts of the Northwest.

"Among these principles are the following: (1) Don't sow alfalfa on new land until two or three crops have been taken from it. (2) Aim to sow it on land that has been deeply plowed and that has been carefully summer-fallowed the year previous to sowing the seed, or that has grown a cultivated crop well cared for. (3) Sow pretty early in the spring if the ground is clean, but if foul defer sowing as long as it will be safe to do this and be sure of a stand, as this gives time for further cleaning of the land. (4) Sow without a nurse crop where the rainfall is not more than 15 inches in a year, but where more than that, to sow a nurse crop thinly is advisable, more especially if it is cut for hay. (5) Sow with a drill and bury as lightly as the moisture conditions will permit. (6) If you sow loads of good farmyard manure are applied to each acre before the preparation of the land begins, no further steps need be taken as a rule to secure inoculation.

"With reference to the amounts to sow we favor 1 to 1½ pounds of seed per acre, when it is sown in rows 3 feet distant, when sown in rows 12 to 14 inches apart we favor sowing not more than 3 pounds per acre of good seed where the annual rainfall does not exceed 12 inches, not more than 4 pounds where it does not exceed 18 inches and not more than 6 to 8 pounds anywhere in the absence of irrigation in the Northwestern states. The old time advice to sow 15 to 20 pounds per acre was almost a crime.

"With reference to the distance between the rows that will give the best results when the rainfall is above 10 inches probably 18 inches would be better. This applies to growing the alfalfa for hay. As to the best way of growing it for seed we are not as yet quite decided."

MORE ABOUT MARKET

People Who Would Have Patronized Farmers "Roast" Location

With the public market in Oregon City officially abandoned by the "Board of Trade," men and women who would have been glad to patronize the farmers had the market been located elsewhere than it was are beginning to express their opinions of the plan as it eventually worked out in the county seat. General criticism of the location is heard on all sides, and in many quarters it is intimated that there was even lack of faith in the market plan by its founders.

People generally declare that the market would have been a success had it been located on the hill. Farmers would have been more willing to drive to it in that case, and shopping would have been far more convenient for the housewives. How women could have been expected to shop at the market at its Fifth street location, and then carry a heavy basket filled with vegetables and other purchases home up the hill, is something that few of Oregon City's fair sex can understand.

"It doesn't seem to me that the people who started the market wanted it to be a success, anyway," said one Oregon City housekeeper to the Courier this week. "If the market had been located on the hill I know of a dozen or so women who would have patronized it. They could have run over in the morning wearing their house-dresses; and after they had bought what they wanted, they would not have had to carry the stuff home. But with the market downtown, women felt that they had to dress up before going into the business section of the city; and besides that they dreaded carrying a filled market-basket up the steps after their purchasing was done. If the market had been placed on the hill it would have been a success; and if the members of the Board of Trade had consulted the women folk first, they would have learned this."

Some "kick" has been made because the Courier recently remarked that the merchants of the city had fought the market. In using the term merchants, the Courier referred chiefly to grocers and butchers, who saw in the market a new competition to their own business, and who naturally did not welcome the innovation. Other merchants, with whom the market did not compete, naturally boosted for it, because it brought more shoppers downtown.

It is to be hoped that the market idea will be given another trial, but that it will in the future be located on the hill, where it will be convenient for the women folk.

Security Lodge Elects

Knights and Ladies of Security elected officers for the ensuing year at their meeting Monday night in the county seat, choosing the following: Mrs. Henry Henningsen, president; Mrs. Pauline Schwartz, first vice-president; George Green, second vice-president; Mrs. Della Green, secretary; Mrs. M. P. Chapman, financial secretary; Mrs. Anna Cross, prelate; Mrs. Neita Woodward, conductor; Miss Nellie Lindquist, sentinel; William Green, guard; musician, Oscar L. Woodfin.

Saving and Small Earnings.

In the Scotch parish where the savings bank originated a great majority of the inhabitants were poor cottagers. Their average wages did not run over 8 shillings (about \$2) a week.

"It seemed," wrote Samuel Smiles, "a very unlikely place in which to establish a bank for savings, where the poor people were already obliged to strain every nerve to earn a bare living, to provide the means of educating their children—for, however small his income, the Scottish peasant almost invariably contrives to save something where he can, and to send his children to school—and to pay their little contributions to the friendly society of the parish."

In four years this unpromising field yielded to the Rev. Henry Duncan's bank at Ruthwell nearly \$5,000. The bank became self-sustaining, and all over Scotland and England the new savings bank idea spread.—Chicago News.

England's First Scientist.

The first great English scientist was Roger Bacon, who died in 1294. The exact date of his birth is unknown, but it is believed that this year marks the seven hundredth anniversary. He was persecuted and condemned and much of his work destroyed, so that the extent of his discoveries cannot be definitely known. It is certain that he was centuries ahead of his ignorant and credulous times in chemistry, mechanics and mathematics. Branded as a magician, he was thrown into prison. From 1277 until a short time before his death Bacon was imprisoned in a filthy cell. He is said to have invented the camera obscura, the air pump and the diving bell, and he was acquainted with the uses of optical lenses and the nature of gunpowder, although the projectile power of gunpowder appears not to have been discovered until the following century. It is said that during a war Bacon set fire to the chief buildings in a town by using burning lenses.

Flexible Stone.

Itacolumite is a peculiar stone which is found in Brazil. When flexible itacolumite is cut into thin plates, and when examined with a microscope it is found to be composed almost entirely of fine grains of sand of peculiar shape, with indented edges which interlock like the fingers of clasped hands. The flexibility of the material results from this interlocking of the grains of sand, of which it is chiefly composed. Although but few persons know that this stone can be anything but hard, the flexible stone is not so much of a curiosity as it seems, for it is found in North Carolina, and there are specimens of it in a case at the Philadelphia collection. The sensation of handling a piece of stone which bends like a piece of rubber is a strange experience. If handled too roughly the stone breaks.—Indianapolis News.

A Museum's Worst Enemy.

One of the worst enemies curators of museums have to contend with is a tiny beetle, which works so neatly that there is no evidence of its woeful work until the specimen is found dismembered or otherwise ruined. Neither in America or England has any effective remedy been found. The tiny mischief worker is the Anthrenus museumorum. The adult measures only or even less than one-eighth of an inch in length and is convex in form. The female lays eggs in specimens, and the larvae feed on them—the valued butterfly and the magnificent beetle—brought from afar. These larvae are small, plump, hairy grubs, and the sole sign of their presence, likely to be overlooked by the amateur, is a few specks of brown dust in the case.—Scientific American.

Next Door to It.

An acquaintance of the late Josh Billings was one day talking with him about the remarkable increase of imitations and substitutes for original articles, as oleomargarine for butter, celluloid for ivory, and so forth, "and," said he, "many of the substitutes go ahead of the real thing. I guess in time there will be a substitute for everything, though I don't know about wisdom."

"No," replied the humorist, "up to the present time at least there is no really good substitute for wisdom. But silence is the best that has so far been discovered."

Slow Fathers.

"Mamma, I'm afraid papa was pretty slow when he was a young man." "Perhaps he was. He always paid his debts, and used good English, and knew nothing about cigarettes, and never saw a taxicab, and hadn't any clubs, and was able to support a wife before he married. I guess he was pretty slow."—Cleveland Plain Dealer.

His Handicap.

"My most disturbing thought is that I may die and leave my son unprovided for." "But wouldn't he be able to make his own living?" "No; the poor fellow is too sadly handicapped. He is a genius."—Houston Post.

A Disgusted Lover.

When James IV, of Scotland went to London to the daughter of Henry VII, he was somewhat disgusted to find her at their first meeting so busily engaged in a game of cards that she was scarcely able to give him any attention.

A Germ Crank.

The author (describing his play)—And then the villain is made to bite the dust. The Lady—How very insular!—Boston Transcript.

For all the disorders of the tongue the remedy must begin in the heart

BAND MAKES HIT

Corvallis Firemen are Stars of Big Valley Tournament

The one thing that made a success of the Willamette Valley Firemen's tournament this week in the county seat was the Corvallis Firemen's band and the delegation of "smoke-eaters" from the college town up the valley. In fact so much of a hit did the band make, and so hard did the Corvallis boys try to see that everybody had a good time, that the crowds on hand forgot that two of the expected teams failed to show up, and everywhere that people discussed the tournament they praised the upper valley boys.

The band, of course, was largely responsible for this. The Corvallis musicians seemed never to tire of furnishing music, and they responded to accolades with the greatest of good will. Their playing heralded each event of the meet, and in between the meets the boys played just to keep the crowds from getting tired waiting for the next event. Not only did they play, but they played well; and the rendering of the more popular pieces simply set the spectators to dancing on the street. Everybody agreed that the band was a winner, and if at any time the Corvallis boys should lose their own homes, they will find the latch-string hanging out and the door open in the county seat.

The Corvallis boys who were not members of the band seemed to have the same spirit of wanting to please. Whether they were winners or losers in an event made no apparent difference to them, and they were in constant good nature. They tried to make every event they entered of interest to the throngs of spectators, and they never quit till they were through with their stunt. They brought the right spirit with them, and showed all the way through that they were in the fun for the sport for it.

The Corvallis boys won a warm place in the hearts of Clackamas county folk, and after the meet was over even the doleful people said that if their homes should happen to burn down at any time they hoped the Corvallis boys would be on hand to quench the flames; for, as one gray-haired citizen expressed it: "Those boys are so cheerful that they'd make even a fire seem like a picnic. And they've got grit, too; and that is what counts."

OREGON EXHIBITS MANY

Industrial Displays at San Francisco Bring New Business

Commenting on the industrial displays of Oregon firms at the Panama-Pacific fair at San Francisco, the weekly letter from the Oregon commission says, in part:

"Several Oregon concerns are receiving extraordinary advertising here. The Dayton Evaporating & Packing Company has a display of evaporated garden and orchard products at both the Oregon Building and Palace of Horticulture that attracts very great attention. A chemist from the department of agriculture at Washington, whose business it is to look after matters of this sort, saw the exhibits the other day, and said that he had seen no other anywhere that would compare with the Dayton product. He was so impressed that he left here with the determination of going to the Oregon town to investigate thoroughly.

"The Pendleton Woolen mills have a magnificent display at the Oregon building and besides getting the advertising, hundreds of orders are being taken.

"The Oregon City Woolen Mills have a loom in operation at the Palace of Varied Industries, with the Mitchells in charge, and they have been successful in securing large orders from scores of large eastern firms, besides selling tremendous quantities of goods here.

"The Oregon Fruit Juice company at Salem is giving away a great quantity of the loganberry juice here every week, and has a demonstrator in a city department store. Thousands of orders are being taken. The Eugene Fruit Growers Association, the Northwest Fruit Products Company, of Salem, have bottled goods and literature here.

"Scotch Hop Ale, made at Medford, a non-alcoholic drink, is making a great hit at the Oregon building. Tillamook cheese is being demonstrated at a booth adjoining, and the combination is a wonderful refresher for the tired ones.

"This specific endeavor, with other of its kind noted heretofore, means the increase of prosperity and enlargement of industry for Oregon concerns and will add to the sum total of good derived from Oregon's effort at the Exposition."

LOOK OUT FOR 'EM

Schooldays and Other Things are near At Hand Again

This is the time of the year when school days are threatening the youths and maids of our land, and when the keen businessman advertises that he will sell school supplies at bargain prices. Yes, this is the time of the year; and it is also the time to read advertisements carefully.

If you don't believe it, consider this: once upon a time, in a town not far removed from here, a certain store had been selling slates all summer for 11 cents each. And the week before school opened, the owner of this store went and put an advertisement in the paper, and the advertisement read:

"School slates, specially priced at 13 cents."

And a whole lot of mothers, who might have bought slates for 11 cents any time during the summer, went to that store and paid two cents more just because the "bargain" in the advertisement appealed to them.

For the benefit of storekeepers who may take this exposure of advertising psychology as a personal insult, it may be remarked that it was not an Oregon City store that did it.

At Balaklava.

The total Russian forces, infantry, cavalry and artillery, at Balaklava have been variously estimated at from 30,000 to 50,000 men, while the English force was much smaller in numbers. The two famous charges of that day were that of the heavy brigade of about 900 men against 3,000 Russians and the still more renowned charge of the light brigade of about 600 men against the Russian guns. No accurate figures seem to be recorded, as those given by various authorities differ greatly. The result of the first charge was the break of the Russian cavalry, which fled back to the protection of their artillery and were not pursued very far by the British. The second charge was unsuccessful as a military measure, for, though the Russian gunners were momentarily driven from their guns, they returned and fired upon friend and foe alike, while a superior force of cavalry engaged the British. It is said that evening parade saw only ten men mounted out of the 600 who had ridden in the charge.

Sights in Italian Cities.

Genoa and Rome are the most beautifully lighted cities in Europe because their streets are narrow enough to allow of the alighting of white electric globes across from house to house. There are no disgusting lampposts, but at intervals down the middle of the street swing the globes of light of the tint of moonlight. Venice, on the contrary, is terribly overlighted and glitters distressingly and inappropriately. Ruskin complained that the gas in the great piazza had grown so dazzling in his day that walking or sitting there he could no longer see moon or stars. What would he have thought of the horrid exaggeration of the clusters of electric lights? Without being a Ruskin one longed to switch off blue out of every ten.—London Globe.

How Very Annoying!

Just as the young man raised his hat in response to a bow and a smile from the beautiful girl who was passing by his foot struck a banana peel and flew out from under him. He landed on the back of his neck, his hat flying in one direction and his cane in another.

"Are you hurt?" asked a friendly policeman as the victim of the accident sat up and began to swear volubly.

"Hurt!" he exclaimed. "No, I'm not hurt. I'm dead sore; that's what I am. That bonehead camera man across the street forgot to turn the crank, and now I've got to do that fall all over again."

Then the policeman realized that he had been privileged to see a moving picture comedy in the making.—St. Louis Post-Dispatch.

Putting Off.

When the ship Central America sprung leak in midocean a steamer, seeing her signal, drew near and asked, "What is amiss?" "We are in bad repair. Lie by till morning," was the answer. "Better let me take your passengers on board now." "No," said the captain; "lie by till morning." In an hour the lights of the ill-fated steamer were not visible. She had gone down, and all had perished. Mr. Moody once said a meeting in Chicago, saying, "Think this matter over till next Sunday." On their way home from church that evening a light suddenly flashed across the sky. It was the beginning of the great Chicago fire. That congregation never assembled again.—Christian Herald.

Hurrying Up.

Melancholy Aunt Clara from the country had the habit of listening to the big clock on the town hall in the village where she was visiting and exclaiming every time it struck:

"Eternity draws one hour nearer." Clarence was very much impressed with that solemn reflection. One day the big clock got out of order. While repairing it the workmen made it strike every few minutes. Clarence heard it with bulging eyes.

"Oh, Aunt Clara," he said excitedly, "eternity has got a move on today!"—New York Times.

His Excuse.

Justice of Peace—Your wife says you struck her. Have you any excuse to offer, uncle? The Prisoner—Ah suttinly has, judge. While I wuz prayin' fo' rain fo' mah yardin she starts in prayin' fo' fair wedder 'case she was gwine to wash.—Boston Journal.

Swiss Cowbells.

The cowbells used in Switzerland have a peculiar sound, rather mournful in its droning prolongation. It has been discovered that tigers fear it and run when they hear it. Therefore Swiss cowbells have been introduced into the Himalayas as a protection for cattle.

Her Little Joke.

"Henry," she exclaimed as he came home to dinner, "I heard something early this morning that opened my eyes."

"What was it?" he demanded excitedly.

"The alarm clock."

Luck.

"What's your idea of luck?" "Well, I've noticed that the fellow who works most of the time to earn his way seems to get what luck there is about."—Detroit Free Press.

He Might Shrink.

Mother—I've just washed a jacket for my little boy, and now it is too short.

New Maid—Well, wash the boy.

It is right to be contented with what we have, but not with what we are.

WALT COMES HOME

Senator Dimick Returns after Eating Fish for Month

Senator Walter Dimick, who has been away for a month or so, returned to the county seat last week. He says that he and his party went up in the Three Sisters country until they found a lake inhabited by large trout. After catching the first fish, the party, in which there were six, decided to stay until they had eaten the trout. They ate trout every day at every meal, and it took them nearly a month to finish the first one caught.

More details of their trip are contained in the Benton County Courier, the editor of which saw the bunch just as they emerged from the wilderness, and who describes their appearance as follows:

"Tuesday morning three modern autos drove into the city.

"Nothing suspicious about this, but the five men in the cars looked decidedly suspicious, and it is said Chief of Police Wells was tipped off to get a line on the bunch and find out their business.

"The men were roughly garbed, wore high-topped shoes with spikes and all had full beards.

"The two lead cars only stopped in the city for a minute to ask if the road to McMinnville was by way of Independence, and if Independence was yet a wet town, and then they tore out in excess of the speed limit.

"The others stopped at the lower end of Second street where one of the men got out, looked cautiously about, and slipped over to McGinnis' store where it was afterward learned he bought 15 cents worth of fruit, and begged a chew of tobacco from a bystander.

"The two men attracted considerable attention, as they were hard-looking customers, and doubtless fearing arrest finally one of them made a full explanation.

"He said the five men were E. B. Tongue, county attorney, of Hillsboro; E. C. Runyon, court stenographer of Portland; Senator W. A. Dimick of Oregon City; E. B. Runyon, court reporter of Portland; George R. Bagley, Circuit Judge of Hillsboro.

"This bunch was returning from a month's hunting and fishing trip in the Cascades.

"They drove their cars to McKenzie bridge, then packed in to Elk Lake, 38 miles, and they hunted and fished at Elk Lake, Horse Lake, Hayes Lake, Belknap Springs and other places.

"The stories they told—nothing half 'em. They would look you squarely in the eye and affirm they caught speckled brook trout, as fast as they cared to, that weighed five pounds; shot three deer and on a lion yarn when Senator Dimick broke it short. As a criminal lawyer the senator is a pretty good judge of human nature, and he saw the court reporter was going a little too strong.

"It was said Dimick and Runyon made the round of the barber shops, but none of the barbers would tackle them. Later the senator was seen to come out of a hardware store and the day book had a memorandum 'Horse Clippers, \$1.75.'

"The campers say that the trip was the most enjoyable of outings, with all kinds of game, fish appetites, and health."

POINTS ON WATER

Government Issues Book on Oregon and Washington Streams

Engineers and water users in the Northwest will be interested in the announcement of the publication of a report containing the results of stream-flow investigations in 1913 at a large number of points on the lower Columbia and its tributaries in Oregon and Washington and on the Rogue, Umpqua, and Siletz rivers in Oregon. This report, which appears as Water-Supply Paper 362-C, was prepared by officials of the United States Geological Survey from data collected in cooperation with the State of Oregon, represented by John H. Lewis, state engineer, and the State of Washington represented by Henry Landes, State geologist.

Two other parts of Water-Supply Paper 362 (362-A and 362-B) will contain, respectively, records of stream flow (A) in Pacific drainage basins in Washington and upper Columbia River and its tributaries and (B) in the basin of Snake River.

The reports are technical in character and lack interest for the general reader, but they furnish information of inestimable value to the designers and promoters of plans for the utilization of the streams of this great region.

Copies of the report may be obtained without cost by applying to the Director, United States Geological Survey, Washington, D. C., or may be consulted at the Survey's district office, 416 Couch Building, Portland, Oregon.

Students Arrive at O. A. C.

Although opening of College is still two weeks away groups of students are beginning to reach the Oregon Agricultural College in large numbers. This early arrival, more or less usual, is larger than usual this year, because of the changes brought about by raising the entrance requirements of degree students to four years of high school work, or its equivalent. College home associations will be formed on a slightly modified basis, and many club houses will be opened this fall for students' associations. Planning the future under the new conditions is now the pleasurable occupation that calls the early assemblages of College students.

Call Is Issued

St. Paul's Episcopal church, of the county seat, has extended a call to the Rev. T. T. Hicks, of Neganaw, Michigan, to fill the rectory vacated by the Rev. Charles W. Robinson.

WOLF HOWLS

(Continued from Page 4)

two wheels of the buggy were broken. Presumably the driver wasn't looking where he was going at the time, or wasn't going where he was looking. This information was brought us by the rider of the bicycle, whose identity is a profound mystery to the couple in the carriage that was smashed up.

We have a great labor saving device in our office. It is called an adding machine. It is supposed to save time, as well as labor. The other night we sat down at it, and desiring to save time, punched the funny knobs on it for about ten minutes, adding up the cost of the streetcar that Oregon City has undertaken. Then we struck a total, and discovered it to be \$620.75. Being rather surprised at this, we added it up with pencil and paper, and got the total \$17,020.75. Then we discovered that the adding machine wouldn't add any higher than \$999.99. Isn't that a fine labor saving device with which to keep tabs on our "economical" city council?

But at that, we think it would be good for the taxpayers if every member of the council bought one of these adding machines, and limited the cost of his "bright ideas" to the figures he could get out of the "adder."

In a social item in one of our contemporaries we notice that "many friends enjoyed the reception." This isn't as startling as it looks, when one considers that only an "r" makes the difference between "friends" and "fiends."

And speaking of remarkable things, a friend dropped in the other day and said: "I just saw two steamers walking over the suspension bridge." We doubted this, and called up Prof. F. J. S. Toole, at the high school, and he told us that our friend hadn't lied—but that he should have put a comma between "steamers" and "walking." Such is the language which we use in an effort to convey our thoughts.

Commas are little things, and people use them altogether too indiscriminately. Absence of a comma from a law in Boston made it possible once for saloons to be open after eleven o'clock at night. And then think of the difference that two commas make in the following sentence: "The boy said the teacher was a devil."

When you put in the commas it transfers the roast to the youth, making it:

"The boy, said the teacher, was a devil."

It is well at this time of the year to call attention to such things, for school opens soon, and our small boys and girls will come home and ask us to help them with their lessons. And then we will discover how much we don't know.

And speaking of teachers: we knew a perfectly lovely girl once upon a time who taught the eighth grade. And about once a month she would smile at her class, and say: "Will some little boy or girl please bring me a cake of soap tomorrow; I want to wash off the blackboards."

And the next day every pupil would turn up with a cake of soap. Some would bring perfumed toilet soap, some would bring laundry soap, and some would bring just half-used pieces of soap. And the teacher would use the pieces of soap to wash the blackboards, and would take the others home. The perfumed toilet soap she would keep for herself, and the laundry soap she would give to her landlady.

Thus it is to be seen that there is a graft in even being a schoolteacher.

Slashings Burned

Reflection in the sky south of the county seat Sunday night led many people to believe that a large fire was raging at Canby. Investigation showed the blaze was a slashing fire on the Cahill place, near New Era.

We take particular pains with the stationery we print for our customers.
