COMMUNITY SPIRIT

The editor of this paper attended the State Editorial convention held at Pendleton on July 13-14-15, and is now back at his desk with a feeling that he has learned something in the way of community spirit and good fellowship that will last him through many years to come.

It is impossible to describe that team work—that "get together spirit"—that prevails throughout that country and which has made it possible for those people to do big things in a big way.

From the time that the editors arrived in Pendleton to the trip through the great wheat fields of Umatilla county and up to Walla Walla Lake, they found that same open hospitality and community spirit that prevails in the city of Pendleton. It is no wonder that the "Round-Up" is a success; it is no wonder that the people are prosperous and happy; it is no wonder that they produce men that loom big in public affairs. They all have that boosting spirit, that community development idea that makes that country what it is.

The editor of this paper takes off his hat to those cities of Pendleton, La Grande, Joseph—they have the right idea.

OUR RESOURCES

The British government in East Africa seems to be making a laudable effort to prevent some of the natural resources from passing into private ownership, and become a means of exploiting the people. United States Consul Henry P. Starratt, of Mombasa, reports the following regarding lands for sisal cultivation:

The title to most of the land suitable for sisal is vested in the Crown and held by individuals under 99-year leases, for which the government receives an annual rent ranging from \$0.01 to \$0.06 gold per acre per annum for the first 33 years, and, in the case of "Class 1" (\$0.06 per annum) land, \$0.18 per acre per year for the second 33 years and \$0.52 per acre per annum for the last 33 years. These leasehold rights may be purchased from those who have acquired them from the government at prices ranging from \$2 to \$10 per acre for land upon which few improvements have been made. As a general rule, however, good sisal land, unimproved, is valued at about \$5 per acre.

It is evident that the plan is faulty inasmuch as rentals must be too low, when leaseholds can be sold at the price mentioned by the consul. But faulty as the plan is, it is superior to the method by which in the United States a large part of the former public domain has passed into the hands of great corporations. Under the East-African plan the government gets some of the rental value. Under the American method it gets none.

A better system than this was recommended for the United States by the Department of Labor, and incorporated in a bill by Congressman Cresser, known as the Cresser Colonization Bill. It provided for leasing to workers what is left of the public domain, with provisions for periodical revaluation, so that there would be no temptation to hold land for unearned increment. Had the British East Africa government adopted such a provision, it would now be showing better results.

THE COAL MONOPOLIST

The Federal Trade Commission takes note of the fact that land monopoly is at the bottom of the shortage in coal supply and recommends removal of the land, who happens in this case to be the coal-carrying railroads. The Commission deserves credit for its boldness in making clear what other officials investigators have blinked.

The ownership of coal lands by railroad corporations or interest of coal land owners in railroads, has

made independent operation of coal mines difficult. Congress and State legislatures have tried to remedy the matter by forbidding ownership of coal lands by railroads. The utility of such a measure could be foreseen easily. Now the Trade Commission recommends that the government take over the railroads and mines, and thus become itself both landlord and carrier. The private monopolist will thus be abolished, and with him out of the way less difficulty is to be expected in production and distribution of the coal supply.

This is not the way that all progressives would have handled the question. The Single Taxers, for example, would say that government ownership of the mines might be avoided, if it were made unprofitable to withhold valuable coal lands from use. A tax on land values sufficient to absorb the entire rental value would compel the owners to permit use of enough coal lands to ensure production of a sufficient supply, while substitution of government control of public highways for private control would be the remedy for discrimination.

However, it is a splendid thing that one kind of land monopolist has been officially recognized as an enemy of the public good. And whatever difference of opinion there may be concerning methods to get rid of him, there is much to be thankful for in the fact that some kind of determined effort to abolish him is to be made.

APPEAL FOR DENNY'S WIDOW

Woman Whose Husband Shipped In First "Chinas" in Need

Portland, Oregon, July 10, 1917; To the Sportsmen of America; Dear Sportsmen—As the president of the Oregon Sportsmen's league my attention has been called to the fact that the widow of the Honorable Owen N. Denny, who was the first man that shipped the Chinese game birds to America in November, 1882, is now living in this city and she is in need of funds to save her home.

You will remember, good sportsmen, that Judge Denny was a very able and honorable man and he has given to us a great gift well to be remembered. Since his death in the year 1900 his wife, Mrs. Gertrude Jane Denny, was left with with a home, and, about four years ago, believing that she could receive an income if she could mortgage her home for Six Thousand (\$6000) Dollars, she did so, but the investment was a failure. During the past four years she has labored faithfully to pay the interest on this mortgage by selling heirlooms, furniture, and taking roomers in her home and now, in her eightieth year, with about four thousand (\$4000) dollars contracted debt, she is about to lose her home. I have been able to have the mortgagee withhold the foreclosure for a while, so please hurry this matter.

I fully believe that the Sportsmen of America will contribute one (\$1) dollar or more each, and that the sum of ten thousand (\$10,000) dollars will be raised to clear this mortgage and indebtedness as a living monument to the memory of Judge Denny and for the protection of his faithful and honorable wife. Therefore, I appeal to you as loyal sportsmen to immediately communicate with me about the matter as Portland began last week to raise her share.

I am mailing the various leagues of the state full particulars enclosing subscription blanks, etc., hoping for their full cooperation in this very worthy cause.

R. W. Schmeer, cashier U. S. National Bank, Portland, Ore., has been appointed treasurer of the Denny Memorial Fund. Make full report to the treasurer.

Yours sincerely,

DR. EARL C. McFARLAND,
President of the Oregon Sportsmen's League.

Establish a home canning firm, "Father, Mother & Co." Don't forget the little "co's."

Poultry Farming

GROW MORE POULTRY.

Meat Supply of Nation Can Be Easily Increased by Farmers.
(Prepared by United States Department of Agriculture.)

The greater production of turkeys, ducks, geese and guineas, all of which can be profitably raised and a ready market found in most sections, would increase the supply of poultry meat considerably. The production of ducks especially should be emphasized at this time because of the rapidity with which they grow. Ducks of most of the meat breeds, properly fed and managed, frequently weigh from five to six pounds at ten weeks of age. It is estimated by poultrymen making a specialty of growing ducks that the feed cost per pound of producing duck meat

BOULES DRAKE.

ranges from 8 cents to 12 cents, depending upon the current prices of grain and other feeds.

The number of marketable eggs can be increased by following a few practical suggestions. Among the most important of these are the production of the infertile egg after the breeding season is over and the proper handling of eggs by the farmer before sending them to market. The infertile egg is obtained when all male birds are removed from the flock. This does not decrease the number of eggs produced, but it does increase greatly their keeping qualities. The production of the infertile egg and the proper handling and marketing of eggs by the producer would increase tremendously the number of marketable eggs each year by diminishing the quantity that are rendered unfit for food.

An increased production of ducks' eggs is advisable where available markets are found.

The poultry house should be clean and sanitary and the fowls free from insect pests, thereby preventing disease and mortality. It is estimated that nearly \$9,000,000 worth of poultry is lost each year through disease alone. Special attention should be given to the feeding and housing of laying fowls at seasons of the year when their natural source of food supply is cut off.

MONEY IN DUCKS.

Buff Orpingtons Are Good Layers and Thrive in Confinement

In these days the prospective breeder or beginner in the breeding of water fowls is looking for a breed or variety that will net him the most profit. writes a correspondent of the Western Poultry Journal. In waterfowls we have some very good specimens noted for size. Then we have small specimens noted for their egg laying, and the one that combines all is the Buff Orpington duck. All waterfowls are beautiful, but the Buff Orpington ducks are the most beautiful of all waterfowls. Buff Orpington ducks, although a new variety, are becoming very popular, having been admitted into the standard under the new and shorter name of Buff ducks. They are not as tame as the large breeds, such as the Peking and Rouen, yet a two foot fence controls them, and they thrive well in confinement.

In color they are a rich shade of fawn buff. The drake has a seal brown head and neck with natural variations, being a trifle darker in color. These ducks are excellent layers, great foragers, hardy and therefore easy to raise. They mature rapidly, being ready for the early market. They make an ideal duck for the table, as they are not greasy. They have a very strong game flavor and yield a beautiful supply of beautiful soft and short feathers. They lay large white eggs, and matured ducks weigh from five to eight pounds. If you contemplate breeding ducks, give the Buffs a chance to demonstrate that they stand unapproachably by any other breed as all around purpose ducks.

Oh, yes; we will have to admit they do not sit!

Green Feed For Chickens.

Chickens confined to small yards should always be supplied with green feed, such as lettuce, sprouted oats, alfalfa or clover, but the best place to raise chickens successfully is on a good range, where no extra green feed is required. Where the chickens are kept in small bare yards, fine charcoal, grit and oyster shell should be kept before the chickens all of the time, and cracked or ground bone may be fed. The bone is not necessary for chickens that have a good range.

Helps Asthma and Hay Fever

Now comes the season when hay fever and asthma cause thousands to suffer. "I have been troubled for years with asthma," writes E. C. Schaefer, Creston, O., "and find Foley's Honey and Tar the only thing that gives me relief. It loosens the phlegm so I can throw it off and sleep. Had to sit nights in my chair, not being able to lie down, before using Foley's Honey and Tar." A standard family remedy for coughs, colds, croup.—Jones Drug Co.

APPEAL HYDE LAND CASE TO STATE SUPREME COURT

Laverne Petterson filed suit for divorce here Monday morning from Pedar Petterson, whom she charges with desertion. They were married July 18, 1912, and he left her August 1, 1914, according to her complaint. There are no children and she asks that her maiden name, Laverne Parks, be restored.

Jos. Shermanski has started suit to foreclose on a note for \$2,650, secured by a mortgage on land in section 12, township 6 south, range 2 east, owned by S. M. Shaver and wife.

Notice of appeal from the decision of Judge J. U. Campbell in the case of the state versus F. A. Hyde, A. S. Baldwin, and others, was filed by the state. The decision held that the title to sections of school lands in townships 36 and 16 were made valid by statute in 1901.

NOT YET A MELTING POT.

It Will Take This Country Centuries to Blend Its Varied Races.

Through an extensive study of members of some of the oldest American families America as the "melting pot of the nations" proves to be but a convenient expression for writers and orators—merely a picture drawn by those who do not trouble themselves about the precision of their figures of speech, a myth without foundation of fact.

For four years Dr. Ales Hrdlicka, a curator of the division of physical anthropology of the United States National museum, has had under way his investigation of the blending of the various types of humanity in America, which, though not yet fully completed, has resulted in the inevitable conclusion that the forces of heredity are too strong to be radically altered in a century or two and that we must wait centuries longer to find a type which will justify the statement that America is in reality a "melting pot" of the nations. Dr. Hrdlicka finds that even the first material that went into the "pot" has not melted yet.

Several hundred members of the old white American stock have been measured most carefully and examined in many ways to find if the people making up this stock are tending to become alike—if a new subtype of the human race is being formed here in America with intermarriage, environment and under the pressure of outward circumstances. Dr. Hrdlicka finds definitely that as yet such is not the case. His investigation shows that the descendants of the pilgrim fathers, the Virginia cavaliers, the Pennsylvania Dutch and the Huguenots, while possibly not as much unlike as their ancestors probably were, are still far from a real blend.—Philadelphia Record.

THE DEADLIEST POISON.

Curare, Whose Secret Is Known Only to the Abors of India.

The cranks who not so long ago conspired to murder Premier Lloyd George were going to employ curare, the kind made by the Abor tribesmen of India, which is the deadliest poison known to man.

It is believed in London, where curare has been extensively studied, that its chief ingredients are snake venom and certain distillations from decayed corpses. It is even asserted that the Abor tribesmen test the strength of curare by injecting a little into a vigorous tree. If all the leaves of the tree do not fall off within twenty-four hours the poison is considered inefficient.

The Abors use curare in a simple, primitive way. They dip their arrow tips in the fresh poison. The slightest scratch from one such arrow tip means certain and immediate death.

The English conspirators, it will be remembered, planned to attack Lloyd George in the Abor way, shooting curare poisoned darts at him from an air gun.

The last case on record of curare murder occurred in Vienna, where a young doctor recently was sentenced to life imprisonment for supplying a young married woman with curare. She touched the poison to a scratch on her aged husband's arm, and he died in great agony.

Chickens are the only living creatures immune to the deadly effects of curare.—Detroit Free Press.

Saving Daylight.

The best way to save daylight is to get up early in the morning. The best ways to get up early in the morning are:

First.—Go to bed early at night.
Second.—Get an intermittent alarm clock and put it several yards away from the bed.

Third.—Say up.
If every American followed these simple rules there would be far more daylight in this country than there is now.—San Francisco Bulletin.

Problems Needing Solution.

As examples of problems calling aloud for solution Henry Le Chatelier, the French scientist, names the following: In glassmaking, the limits of the variation of viscosity of glass in terms of temperature and chemical composition; in metallurgy, the measurement of hardness of tempered steel; in heating, the calorific conductivity of porous substances, such as fire brick; in agriculture, the laws of germination of grain in terms of humidity, temperature and oxygen supply.

Neutrality.

A proclamation of neutrality, the first in our national existence, was made by Washington April 22, 1793, citing the fact that a state of war existed between Austria, Prussia, Sardinia, Great Britain and the United Netherlands of the one part and France of the other and warning citizens to avoid all acts in breach of neutrality.

How About Right Now?

In fifty years, says a preacher, women will know more than men. There's one clergyman who is at least fifty years behind the times.—Cleveland Plain Dealer.

The Courier and the Daily Journal \$4.75.

Champion

The Old Time Favorite
The Choice of the Modern Farm

MOWERS

Champion Mowers have features which you as a buyer cannot afford to overlook. They mean increased length of service and greater satisfaction to you.

Wide Substantial Yoke.
Extra large case hardened yoke pins.
Extra long case hardened wearing plates.
Extra wide and strong wrought knife head.
Extra light draft and easy of operation.
These are but a few of the reasons why a Champion is an extra good mower to buy.

RAKES

No change has been necessary in the Champion Rake for several years, which is proof that it has reached as near perfection as it is possible ever to obtain in machinery.
Reversing axle stubs, when reversed is like new.
Reversing wheel ratchets.
Removable and renewable wheel boxes.
Best quality spring steel teeth.
Sure working self dump.
Come and study the sturdy construction of the Champion Rake.

TEDDERS

The Champion Tedder has often saved its cost in a single season. One has but to see the Champion work to learn of its excellent service. It is light draft and smooth operating. No matter what you need in cutting machinery, come in and look over what we offer in the Champion. You will find no better on the market and we can make you right prices.

STOMACH TORN UP

Indiana Lady Describes Condition, Which She Says Was Due To Constipation and Tells of Relief Obtained From Black-Draught.

Scottsburg, Ind.—Mrs. Annie Johnson, of this place, writes: "I well remember I suffered for a long time with constipation, which would get me down. I took doctors' medicines and any number of purgatives. They would leave me in a worse condition than I was before taking, and my stomach so upset... I know once I suffered... from constipation, I was so ill we had to have the doctor, just so nervous and feverish. The doctor said I would have to quit medicines, my stomach was so bad..."

My husband was reading and found something about Theodore's Black-Draught and brought me a package to try. I used it regularly at first until I began to feel better, then I used just a dose occasionally. I was cured of this constipation and am sure the Black-Draught did it."

If your stomach is out of order, you will suffer from such disagreeable symptoms as headache, biliousness, indigestion, etc., and unless something is done, serious trouble may result.

Theodore's Black-Draught has been found a valuable remedy for these troubles. It is purely vegetable, and acts in a prompt and natural way, helping to regulate the liver and to cleanse the bowels of impurities.
Try Black-Draught. EB-15

THREE DIVORCES GRANTED

Plaintiff in One Case Ordered to Pay Defendant \$20 Monthly

Minnie A. Lent was granted a divorce from Fred Lent and the custody of a child by Judge J. U. Campbell yesterday. Judge Campbell also gave a decree to Marie Trachsel from John Trachsel and she may resume her maiden name, Marie Loertscher. The bonds of matrimony were severed between Lena Waters Perlich and Albert Perlich and she may resume her maiden name, Lena Waters. Judge Campbell ordered P. F. Helsner to pay \$20 a month to Maude Helsner pending the outcome of his suit for divorce.

Notice to Contractors

Sealed proposals will be received at the office of the County Clerk at Oregon City, Oregon, for grading the road between Rock Creek bridge, four miles east of Clackamas station, and Baker's bridge on Clackamas river, until 2 o'clock p. m. on Friday, August 3rd.

Said grading is to be done according to specifications and profile on file in the County Clerk's office. Bids must be accompanied by a certified check for 5% of the amount named in the bid and any or all bids may be rejected by the County Court.

H. S. ANDERSON,
Judge;

A. H. KNIGHT,
W. A. PROCTOR,
Commissioners.

ECONOMY

An oil cook-stove is cheaper to buy than a wood or coal stove and it's much cheaper to operate. Meals in a jiffy, and a cool kitchen in summer.

All the convenience of gas—economical for all the year 'round cooking. Bakes, broils, roasts, toasts. Steady, evenly-distributed heat, the best for cooking.

The long blue chimneys prevent all smoke and smell.
In 1, 2, 3 and 4 burner sizes, with or without ovens. Also cabinet models. Ask your dealer today.
