THE PEOPLE KNOW

President Wilson will make no swing around the states. His speech of acceptance was made at his summer home and may be supplemented from time to time by appropriate short addresses. These will enable the people to keep in sufficiently close touch with his views upon issues that may arise or plans that may be devised or conditions that may develop.

This plan of campaigning is in keeping with the lofty dignity of his high office. Besides, the great masses of the people of the country are already familiar with the achievements of his administration—their purposes and their already developed results.

For four years he has been the central figure of American politics. The fierce light of publicity all that while has been upon him and his acts. Publicity has been given to his every utterance, to his every deed. If he has made blunders, the people have had their abundant opportunity to know and to consider them. If he has been guilty of inconsistencies, he has avowed them and they as well as his avowals have been given to the world. If he has rendered loyal and unceasing service, that has been shown.

If he has taken seriously and with all his energy to the sacred task entrusted to him four years ago, the voters know it. If he has burned midnight oil in his study of the tremendous and unforeseen problems which have confronted him as they have confronted no other president, that, too, is known.

If he has at times differed with his party leaders, the public has been promptly advised. If he has kept the faith, the public knows it. If he has shown patience and tact and statesmanship, no speeches from him are needed to enlighten the country.

If he has been bold when boldness was demanded, diplomatic when greater results could be secured by diplomacy than by impetuosity, they who are to decide the coming contest, know it.

If he has kept the country out of a war, the tragedies of which no man could overestimate, they know it.

If he has fortified the country by a vast scheme of preparedness, they know it.

If he has maintained his country's honor, unsullied and above reproach and its respect acknowledged by the world, they know it.

If he has been callous to the attacks of political enemies or captious critics for self or party advancement, they know it.

If he has shown his own and the country's sympathies with those who must suffer from the raging conflicts that are holding civilization in a state of amazed horror, they know it.

If he wishes no unfair advantage to come to his own people from the calamities of those of other lands, they know it.

If he has brought to his country out of these dire conditions such a prosperity as no nation in all history has achieved, they know it. If by the legislation he has espoused, he has helped all classes of our people, those who labor and those who loaf, has given equality in all honest endeavor to the former and stimulus to energy to the latter, they know it.

If the nation today is rallying to loftier ideals than ever before successfully appealed to it, they know it. Therefore, and in all confidence of a vote of approval by the country, he is resting his case upon his deeds, the character he has shown, the policies he has advocated; and will leave the use of words to those who are his opponents in this campaign.

HANDS OFF

"Fools rush in where angels fear to tread." Angels might hesitate to rewrite the hymns of the ages, such as "Jerusalem the Golden" or "Ein Feste Burg ist Unser Gott" or "Jesus, Lover of My Soul," or "Greenland's Icy Mountains." They would reflect

that the sacred songs of the Christian church are much more than the single experience of an individual. These psalms of the soul are the voice of multitudes of Christian saints, of entire ages of Christian history, voicing themselves through one human instrument. They are vitalized with a life richer, older and deeper than that of the solitary singer.

But Simon Patten, professor of political economy at the University of Pennsylvania, thinks himself wiser than saint or seraph, says the Spokesman Review. He—God save the mark!—has rewritten many of the great hymns and contemplates further sacrilege. The melancholy result of the present attempt suggests Punch's advice to those contemplating matrimony, "Don't!" The originals which simple Simon has sought to improve were not always poetry. But his verse always is doggerel.

Wesley wrote: "Jesus, lover of my soul, let me to thy bosom fly; while the nearer waters roll, while the tempest still is high." The remainder of his fine hymn is familiar to almost everybody. Whatever its poetic faults, it at least opens with picturesque and forceful imagery. But even this is denatured under the necromantic hand of the professor of the dismal science. Hear him drone this doggerel: "Jesus, lover of my soul, brother, friend and comrade dear; no temptation can control while thy spirit hovers near. All I treasure from thee came, thy kind deeds all people bless." The spiritual adoration for Jesus, which makes Wesley's hymn tingle with religious life, has been done to death by Dr. Patten.

Plenty of modern hymns are doggerel and deserve, not rewriting, but consignment to the fiery furnace. The economic scientist, who ranks deservedly high in his great calling, if he must try his prentice hand at revising hymns, might well put churchly doggerel on his dissecting table. But the time honored chants of the Roman church, the stately recessional and processional of the Anglican, the chorals of the Lutheran or such hymns of free churchmen as Holmes' "Lord of all Being, Throned Afar" or Whittier's "We May Not Bring the Lord Christ Down" or "The Eternal Goodness" should be forever considered sacred from the touch of lesser hands.

FIRE FIGHTING

It is probably a safe bet that no other city in the state of anywhere near the same size as Oregon City is so poorly equipped for fire fighting. Although this city is admittedly one of the most prosperous in the northwest there is nothing to prevent the destruction of its property if that property happens to be any distance from Main street. Fire fighting in Oregon City is in the same place today as it was a score of years ago. It is still in the dark ages.

The destruction of a home early Sunday morning was simply one more evidence of the lack of equipment. The best fire department in the land couldn't have handled the last fire any better than did the Oregon City boys. Given the proper equipment the local department would be one of the best in the country, but handicapped as it is the department is utterly useless when a fire breaks out on the hill.

With nearly 7000 people to protect from possible flames Oregon City is no better prepared to fight fires than a town of 300 people. Motor driven fire apparatus is an absolute necessity. Other cities not half the size of Oregon City have motor apparatus handled by volunteers.

Only a few weeks ago Mayor Hackett pointed out to the city council the great need for improved equipment. Nothing was done, however, and another fire caused the total destruction of property. The only blessing is that a dozen fires have not occurred in the meantime. Anything that gets ablaze here is most certainly a loss if it is off the main business thoroughfares.

Motor driven apparatus would pay for itself within less than a year.

Serviceable equipment is manufactured at very low cost—if economy is any excuse for the delay in equipping the department as it should be equipped. Other and much smaller communities are providing themselves with such equipment, realizing that the saving of one home is payment of the cost of the modern apparatus.

The city council would do a highly valuable service if its members would drop for a time the banter that makes the body the laughing stock of the state—drop the talk of municipal ownership of public utilities, and provide fire fighting equipment for the protection of the property. A municipal electric plant would be a sorry sight if flames struck it under present conditions.

Better give us protection before we get anything more to protect.

HUGHES AND SUFFRAGE

Governor Hughes' veto of the "equal pay for equal work" bill is far more self-revealing, in the reasons given for the veto, than his "personal" endorsement of a national suffrage amendment. It will no doubt be held by the women voters of the country that the right to make a living is a more sacred right than that of winning the suffrage by national rather than state initiative.

The story is an interesting one. The teachers of New York City, women and men both, had secured, after a long, hard fight, the adoption by the legislature of an amendment to the charter of New York City, providing that women teachers should be paid the same salaries that the men received, for the same kind and quality of work done.

When the bill reached Governor Hughes, he returned it without his approval. He wrote:

"The motive of the present bill is to compel equal pay for men and women holding the same position under any particular schedule of salaries. It clearly appears to be open to serious objection. It is proposed by legislative enactment to establish the proposition that for the work of a given position women shall receive equal pay with men. It is for the principle that the supporters of the bill contend, and not for increased pay. I cannot approve this bill.—Charles E. Hughes."

Governor Hughes' argument that the bill ought to apply to the whole state and not alone to the city of New York, and that it ought to include all government positions and not those of teachers only, sounds like the excuse of a man who is trying to escape from the manifest justice of the measure itself, since enacted into law to the satisfaction of all concerned. His prophecy that the "desired legislation would be unfortunate both for the schools and teachers," has proved as foolish as his misgivings about the income tax, whose rejection by the legislature he also advised.

It would be interesting to know if the "hundred per cent candidate" holds it to be still a "fundamental matter," which he "cannot approve," that "for the work of a given position women shall receive equal pay with men."

RAINBOW HUGHES, MEDICINE MAN

"Hi-yah," yells the bewhiskered medicine man of the G. O. P., as he paints another rainbow, "Wilson played politics with the railroad strike."

Played politics is right—and a mighty good brand of politics for the farmer and fruitgrower just now. Wilson surely did bat a homerun into the stand-pat bleachers. No wonder the G. O. P. reactionaries bawl him out. It is a home run to the White House and the people know it. The voters have already sized up the vote in the senate. It tells the whole story. Smoot and Penrose and Cummins—that would-be-president and the whole grizzly bunch of monopoly codding, corporation-serving politicians of the G. O. P. lined up solidly against the eight hour law proposed by President Wilson. And Rainbow Hughes also lines up.

But why did the republican leaders fight the only feasible means of averting the impending strike? Because they are for the interests and against the people—first, last and all the time. Because they would rather see the country tied up, hand and foot, in a war between classes to be followed by anarchy and the torch and starvation of women and children, than to see Wilson, the democratic statesman, bring order out of chaos. That is G. O. P. patriotism!

But after all, the G. O. P. theories and policies and promises in this presidential campaign are but rainbows—appearing after the storm is over. And there is nothing in them but highly colored vapor.

RIGHT OF WARRIORS

The titles of the British nobility to their great landed estates rest largely upon military service performed by their ancestors. Such a title always has been good in England, and will be better now that one of the greatest land owning nobles in the kingdom has attested his belief that British soldiers now fighting for their country are winning an equal claim to a share of the land.

Here is perhaps a solution of the land problem in England. Back in the days of the Henrys and the Edwards a man who stood near to the king and was brisk with the sword could easily win for himself a good landed estate. Having won it he hastened to fence it in and put up signs warning less fortunate persons off. The result is that England is pretty well fenced in today—and Englishmen pretty well fenced out. But after this war, when a couple of million Englishmen come home, having performed exactly the same service that the ancestors of the owners of the fenced in lands performed, why should there not be the same recognition of such service? Indeed, when Mr. Tennant, secretary for Scotland, announced the duke's purpose in the

house of commons a member asked the gentleman if he could get other land owners to follow in the duke's example. To which Mr. Tennant replied that he then and there extended a hearty invitation to other landlords to do likewise.—(Eugene Guard.)

RUSKIS HOME BURNED

Total Destruction Blamed Upon Lack of Fire Equipment

Handicapped by ancient hand-power apparatus, the Oregon City volunteer fire department was powerless to prevent the destruction of the home of John Ruskis and the damage to the adjoining home of E. A. Brady on Duane street at an early hour Sunday morning.

Sparks carried by a brisk south wind scattered over the neighborhood for blocks around and threatened the destruction of much property until the work of a bucket brigade proved effective. The house destroyed was some distance from a hydrant and when the department arrived after its long run in response to a general alarm the place was beyond the greatest efforts of the fire fighters. The loss is estimated at approximately \$2000 and was fully covered by insurance.

The entire fire department was called out by the general alarm that was sounded about 3:30 in the morning and worked several hours in protecting other property from the sparks.

JAPAN'S FIRST GLASS.

Used in Railway Cars, the Natives Put Their Heads Through It.

That observation car would have done credit to any railroad in the world. A Japanese fellow passenger, an official in the Japanese ministry of communications, was amused at our expressions of delight.

"Of course this is all very recent," he explained. "Forty-five years ago there was not a single car nor a single mile of track in the whole of Japan. Why," he laughed, "I can remember the first jerky little trains that were run on the first line to be opened—the one between Tokyo and Yokohama. Glass was a new thing to the Japanese, and there were a great many windows broken and heads bumped during those first few weeks. Passengers persisted in trying to put out their heads without first raising the windows. Finally the glass smashing became so expensive and there were so many complaints over bruised and cut heads that the company was forced to paint a white bar on every window to teach passengers the nature of glass."

Which story we could appreciate, for we had already noticed in the corner of a railroad yard a little old car with white bars painted across the windows. Some of these cars, our companions told us, are still used as third class conveniences on newly opened branch lines, for there are still parts of Japan where the people do not quite understand glass.—Christian Herald.

PACKING A TRUNK.

Here's the Way to Manage the Job to Get the Best Results.

To pack a trunk first collect every thing that is to be put into it. Fold everything as flat as possible. Evening dresses and fancy waists may be put into thin pasteboard boxes, packed in tissue paper and tied with tapes so they won't slip around. These will go on the bottom of the trunk.

Save all the oblong pieces of paper that came home from the laundry in the men's shirts and fold the shirt waists around these. Use stockings and things that will not wrinkle for filling in the small spaces that will happen, even with the most careful packing. Put collars, belts and ribbons into small boxes.

Take folding hangers for dresses and coats. Short lengths of ribbon with a safety pin at one end and a brass ring at the other take up no room at all in a trunk and will be useful for hanging up skirts.

If you have no hat trunk and are obliged to pack your hats in the tray fill the crowns with tissue paper, place them in position and fasten them there with wide bands of cotton tape held to the side of the trunk with thumb-tacks.

Keep always in mind that the more tightly the things are packed in the fewer wrinkles you will find at the end of the journey, provided that you have used care in packing.—New York Sun.

Cursing in Korea.

A strange way of cursing is that of the Koreans. His ordinary swear word is "cunuma," or "you brute." But the Korean considers himself especially abusive when he calls a person his child or grandchild. When he wants to call somebody down the Korean demands both: "Are you not my child? And the angry retort is: 'What? I your child? You are my grandchild.' Then the first goes a step further and cries, 'You are a grandchild of my grandchild!' to which the rejoinder is: 'You conceited fellow! Have you forgotten that you are a grandchild of a grandchild of my grandchild?' When their vituperation reaches its climax the people of Chosen at last come to the point of exclaiming, 'You grandchild of a dog!'

Care of Lambs.

Some shepherds feed the lambs little or no grain until they are weaned, but they are on good pastures with their dams. If the pastures are good the ewes are not fed any grain. Until the pastures have a good start the ewes are fed a ration of oats and corn along with alfalfa, clover or prairie hay. The lambs as well as the ewes should have plenty of fresh water to drink and have access to salt.—Farm and Fireside.

The Tick's Toll of Blood.

The cattle tick and his family eat 550 pounds of meat or blood that would make that quantity of meat from each beef animal raised in the tick infested territory of the south. Stated in another way, the average weight of the beef cattle raised in the tick infested territory is less than 450 pounds as compared with 1,000 pounds which is the average weight of beef cattle in states like Wyoming, Idaho and Montana.

CHINESE DOCTORS.

Their Weird Ideas About Disease and Its Remedies.

PUNCH HOLES IN PATIENTS.

To Perform This Operation They Use Eight Different Styles of Needles, Some Two Feet Long, and the Bigger the Punch the Greater the Doctor.

The bigger the needle with which a Chinese doctor punctures his patient the higher the charge, for the bigger the needle the more distinguished is the physician. If the doctor wears a straw hat, that signifies he is a prosperous doctor and his charge is a little more. If he comes in a sedan, the patient must pay for the chair.

Dr. Franz Otto Koch, writing in the Popular Science Monthly, gives a description of the Chinese physician and how he practices.

"The native Chinese doctor is a curiosity," writes Dr. Koch. "He passes no examination; he requires no qualifications; he may have failed in business and set up as a physician. In his new profession he requires little stock in trade, medical instruments being almost unknown.

"Acupuncture, as it is called, is one of the nine branches recognized in medical science among the Chinese. It is of most ancient origin, having been in use from time immemorial. There are 537 markings to be learned. Every square inch on the human surface has its own name, and some relation to the internal parts, purely imaginary, is assigned to it. The user is cautioned against wounding the arteries; hence he must know the position of the blood vessels. By close study of a manikin pierced with holes the Chinese physician learns where to drive his needles. Parts of the body are selected which may be pierced without fatal results. Sometimes heat is applied to the outer end of the needle, and this is called a hot acupuncture, but the needle is never heated before insertion.

"The needle used looks very much like a sewing machine needle, but it is longer and coarser. Some of the Chinese doctors have needles two feet long and are supposed by ardent admirers to be able to drive these instruments entirely through the patient's body. The great size of the needles is in reality intended to represent the greatness of the owner's skill and reputation. The needles used are of eight forms, as follows: The arrowhead, blunt puncturing, spear pointed, fusiform, round, capillary, long and thick. The point of insertion, the depth and direction are all important. The method is usually to drive the needle through the distended skin by a blow from a light mallet.

"If he can get an old book of prescriptions from a retiring practitioner so much the better for the Chinese doctor. He is now equipped to kill or cure, as chance or his ignorance may dictate. The doctor most entitled to confidence in the sight of his countrymen is the man whose father has been a doctor before him. Confidence in him knows no bounds should his grandfather have followed the same calling. This is not mere fatuous belief in heredity, but is based on the supposed value of old prescription books passed on from grandfather to grandson.

"Fees vary according to the physician's social class and that of his patients and also according to the physician's place of residence. The enormous sum of perhaps 15 American cents or half a dollar at the most may be charged for a visit if the doctor comes in a sedan chair. Of this amount a large proportion goes for the chair. Should the doctor belong to the humbler ranks and come on foot his fee is proportionately less. He assumes a solemn air and owl-like look as he peers out of the semidarkness of a Chinese bedroom through great goggle shaped glasses—two inches across and set in huge uncouth copper frame.

"Most important in diagnosing a case, according to Chinese ideas, is the feeling of the different pulses of the human system. The pulse at each wrist is felt. By thus feeling the pulses the states of a dozen real or imaginary organs are determined. Having thus learned by the pressure at these pulses the seat of the disease, a few questions may be asked, but these are considered scarcely necessary. A prescription sometimes calling for the most horrible and nauseating compounds is prepared in large doses, for the native believes that the larger the dose the more likely it is to prove efficacious. In prescribing for natives the foreign doctor has to give the strictest injunctions that the paper box in which the pills are contained is not to be swallowed.

"The manner in which the Chinese treat their physicians is characteristic. Should a speedy cure not result from the doctor's treatment the patient calls in another. If he does not improve he calls in a third. Thus the medical skill of the whole neighborhood may be drawn upon."

Bound to Have Change.

In the absence of her husband the fascinating young married woman went bounding with an old admirer.

"Ah," sighed the old admirer, "if only you had married me instead of Wilkison."

"When I should have been with Mr. Wilkison at this moment instead of you," said the fascinating woman. "How strangely things turn out!"—New York Times.

Where there is much light the shadows are deepest.—Goethe.

Notice

Mr. Farmer, we want your horse shoeing and have made the price as formerly, four new shoes \$2 to and including No. 6; No. 7, \$2.25; No. 8, \$2.50, resetting \$1, to and including No. 6; No. 7 and 8, \$1.25.

We are prepared to sharpen your disc harrows. Give us a call and be convinced. Satisfaction guaranteed. SCRIPTURE & MAY, 108 Fifth St.

When the painter applies paint on your house

it is to your best interests to know what that paint is—its spreading capacity—its appearance—its durability. You are the man who pays the bill and who loses if the paint goes wrong. Make sure of good results—the most satisfactory and economical job—by having your painter use

SHERWIN-WILLIAMS PAINT PREPARED

It is better than any other prepared paint on the market, or "lead and oil". The Sherwin-Williams Co. safeguard its quality in every process of manufacture. They make all their linseed oil; own and operate large zinc and lead mines and smelters, and make their dry colors in the largest and best equipped dry color plant in the United States. The results are in the goods. Protect your interests and your property with S.W.P.

We sell it.

Ours is a complete paint store with a practical painter in charge. It will pay you to visit us before you paint.

FENTON RESIGNS

Southern Pacific's Chief Counsel in Poor Health

After more than 25 years' service as counsel for the Southern Pacific in Oregon, William D. Fenton has retired from that position to devote his attention to general practice as head of the law firm of Fenton, Dey, Hampson & Fenton.

Ben C. Dey, his law partner, will continue the work formerly done personally by Mr. Fenton. He has been appointed general attorney in Oregon for the company.

Reorganization of the Southern Pacific's law department has been made further necessary by the resignation of Ralph E. Moody, attorney for the company for the last five years, to return to general practice. He has been handling some parts of the legal work of the railroad in a separate office. Henceforth the entire legal department will be under the direction of Mr. Dey.

Mr. Fenton's health became impaired two years ago and now that he has substantially regained his health he desires to be relieved of the strain and responsibility of the railroad work and to devote his attention to private practice.

HEAVY DEMAND

Stock Market for Week Starts Slow in Hog Department

The week's livestock trade began with only 950 head of cattle. Owing to a heavy demand for feeders the market was a brisk one and bulk of stuff was taken early in the day. Ordinary and fair grades sold on a little higher basis, while best steers sold at \$6.75 for several lots. Most of them sold at \$6.50 to \$6.65. Cows and heifers met good demand at steady prices.
