

KNITTING FOR THE SOLDIERS

(Contributed by Mrs. R. M. C. Brown)

By the fireside cozy seated,
With spectacles riding her nose,
A lively old lady is knitting
A wonderful pair of hose.

She pities the shivering soldier
Out in the sleet and the storm,
And busily plies her needles
To keep him hearty and warm.

She cannot ride in an airplane,
Or go down in the depths of the sea;
But she is willing to work for the
men,
Who battle to make the world free.

She cannot shoulder a musket,
Or ride with the cavalry crew;
But, nevertheless, she is ready
To work for the boys who do.

She ponders how, in her childhood,
Her grandmother used to tell
The story of barefooted soldiers,
Who fought so long and so well.

The men of the war of rebellion
Are nearer to her than to us.
That, perhaps, is the reason
Why she is toiling thus.

Ye proud owner of muscle,
Or purse-proud owner of stocks,
Don't sneer at the labor of women
Or smile at her bundle of socks.

Her heart is stronger and braver
Than he who is tallest of all;
The work of her hands is important
As cash that buys powder and ball.

And thus, while her quiet performance
Is being recorded in rhyme,
The tools in her fingers
Are running a race with time.

And now, when beginning to narrow,
She thinks of the trenches and mud;
And wonders if ever this stocking
Will wade to the ankle in blood.

Now she is shaping the heel,
And now she is ready to bind;
And hopes if ever the soldier is
wounded
It never will be from behind.

Now she is raising the instep,
Now narrowing off at the toe;
And prays this end of the worsted
May ever be turned to the foe.

She gathers the last of the stitches
As if a new laurel is won,
And places the ball in the basket—
Announces the stocking is done.

Ye men who are fighting our battles
Across in the armies of France;
The women at home are working
and praying
For the rights of mankind to advance.

Just think of the elders a little,
And a kind wish for the grandmothers,
Who thoughtfully sit by the fireside,
And knit on the stockings for you.

ADVERTISING AND PRICES

There is a peculiar thing about advertised goods that has escaped the attention of many who have been reading business chats in THE COURIER. Do you, reader, recall any widely advertised article that has increased in price since the war? There are some, we admit, but they are mighty few. Hasn't it occurred to you that the advertising which brings phenomenal sales is the only reason why manufacturers can keep their prices down? When gun shy prospective advertisers tell you they do not advertise, fearing they would have to raise prices to meet the added expense, when they fail to realize that increased business more than offsets the outlay for newspaper space, ask them how they account for the fact that these widely advertised products have been kept up in quality despite the fact that hundreds of thousands of dollars are spent each month in advertising space.

AS THE COURIER sees it, the low prices of widely advertised products is directly attributed to the advertising. Increased volume of sales makes profits more numerous, although, perhaps, no larger.

THOMAS LOSES

Cross Complaint Covering Charge for Board Wins

A jury in Circuit Judge Campbell's court last week brought in a verdict for Walter S. and Lola Thomas in the suit brought against them by Henry M. Thomas, who sought to recover \$1106.65 which he says he loaned to the defendants. W. S. and Lola Thomas filed an answer which was in reality, a cross complaint, suing Thomas for \$494.57 an amount alleged due on a board bill. The younger Thomas replied by asking something more than \$700 for labor performed by him. The jury yesterday upheld the contention of Walter S. and Lola Thomas.

"Somebody did a golden deed. Aided his country in time of need. Freely he gave of help and cheer,—Nor counted the sacrifice too dear. Was that Somebody YOU?"

Somebody gave with a cheerful heart; "Gladly," said he, "I'll do my part."

But the thing that he gave wrought harm and shame; So somebody's boy is not the same. Was that Somebody YOU?"

Sincerely yours,
MARY N. BADGER.

RABBITS FOR MEAT

Elaborate Lists of Foods Recommended for Animals.

CRUSHED OATS ARE FAVORED

Cornmeal, Barley and Other Grains May Be Given by Way of Change—Green Feeds Are Highly Important in Winter.

(Prepared by the United States Department of Agriculture.)
The rabbit thrives well on a diversity of vegetable foods. Many writers on the care of this animal prescribe elaborate lists of foods to be followed week in and out. The fact is that a few staple foods are sufficient, but no animal is more adaptable to sudden changes of diet; so that one can feed what is available or cheap, the idea being to produce weight with the least possible outlay of money.

Grain and Hay.
The best grain for rabbits is oats, either whole or crushed, though cornmeal, barley, or other grain may often be fed by way of change. The crushed oats are best when freshly broken, and a hand mill for preparing them is a valuable adjunct to a rabbitry.

Hay is a necessary part of the rabbit's diet, and if possible that of the very best quality should be used. It should be entirely free from moldiness, and the unsweated is always preferable. If one has small grounds where suitable grass grows, the mowing may be done at short intervals and the hay thoroughly cured in such small quantities that no sweating takes place. However, if sweet hay is not available the sweated may be fed to the rabbits without injury, unless it be moldy.

Green Foods.
Rabbits require some green foods for winter. Cabbages, kale, spinach, and rape leaves are recommended. Turnips, beets, and mangels are often fed and have been recommended by many rabbit breeders, but they do not keep so well as the foods just named.

Female Flemish Giant.

Turnips, unless kept in the ground, wilt by midwinter and are then of little use. Beets and mangels keep better, and the latter are the main dependence of some English rabbitries; but, on the whole, cabbages are more economical, as well as more satisfactory in every way. They are usually available until green stuff grows in the spring. Whatever green food is put away for winter use must be stored where frost cannot touch it, as freezing units it for rabbits. Parsnips left in the ground all winter make an excellent early spring rabbit food after the frost leaves the ground in which they grow.

Feeding.
Rabbits should be fed twice daily. Ordinary stock is fed morning and evening, but suckling does should also have a noon meal or be given more than they will eat at the other meals. The general rule is to feed only as much grain or green stuff as the animal will consume. Hay is put into the hutch to be available at any time, a part of it being left as litter. The exact amount of grain or green stuff for each rabbit at a meal cannot be stated, as the appetite varies greatly at different times. Observations of the quantity left over when the animals quit feeding will soon enable the feeder to adjust the meals to the needs of the rabbits. Overfeeding is a much more common mistake than underfeeding.

Rabbits under three or four months old should be limited in the amount of green food. If allowed too much they are apt to become "pot-bellied." When a young rabbit is seen to grow big about its belly, the use of green food should be discontinued and the animal given plenty of exercise. Under such treatment it will soon recover, but if the green food is continued the disease usually terminates in convulsions and death. Old rabbits are not subject to this trouble.

Breeding.
It is not desirable to pair rabbits until they are at least six months old, although they may be bred earlier. Some breeders do not mate animals under ten months of age. Healthy mature rabbits produce larger and stronger litters than younger stock do.

Methods of Mating.
Different breeders adopt different methods of mating. Some leave the buck in the hutch of the doe for but a few minutes, and others leave him overnight. The older does should be mated in February, but it is well to defer mating a young doe until March. She then has young in April, when there is abundant green food to induce a good flow of milk. This lactation development once well established, she is likely always to give abundance of milk for her young. If pairing begins in February each doe may be expected to produce four litters a year, the young coming at intervals of about twelve weeks, with a longer rest in midwinter.

Preparing for the Young.
The gestation period of the rabbit is about thirty days. When the doe is nearly ready to bear young, her

Complaint Almost Gone
"Foley's Honey and Tar is great," writes L. W. Day, 65 Campbell Ave., E. Detroit, Mich. "It relieves bronchitis quickly. My complaint has almost gone and I hope never to have it again." The experience of thousands proves there is no better remedy for coughs, colds or croup. The genuine costs no more than substitutes, and this old reliable family cough medicine should be in every home every winter. Insist on Foley's Honey and Tar—time tried and never failing.—Jones Drug Co.

PLEA AGAINST TAINTING CHRISTMAS GIFT BOXES

Oregon City, Ore. Nov. 13, 1917.

Editor Courier:
As one, who for more than a quarter of a century, has given much time and thought to the welfare of our young people, I would add my protest to that already voiced, against the indiscriminate giving of tobacco, especially cigarettes or cigarette paper, to our soldiers.

Whatever arguments may be advanced for its use in the nauseating conditions of trench warfare, there can be no possible excuse for putting tobacco in any form in our Christmas boxes for the soldiers here in our own land; where those who have become enslaved to the weed can buy it for themselves; they have money. I understand that no soldiers of any nation are better paid than our own, with the exception of the Australian soldiers.

Many of "our boys" have been raised in Christian homes, and have been trained to abhor the weed. There is no argument needed to prove its injurious effects. A large proportion of the members of the Red Cross are non-users of tobacco, and do not approve of giving it to the soldiers. Then why pollute our Christmas boxes with it? The holiest, tenderest influences cluster about the day that celebrates the birth of Him who came to lift men up.

The Red Cross stands for that sympathy and helpfulness that is nearest the divine. It stands for helpfulness and uplifting, not for tempting and destroying those whom it reaches.

This is written with good will, to all, realizing that those who have contributed tobacco in any form, have given it out of the bigness of their hearts, seeking only to give good cheer to the boys, without thinking much about the matter.

One of the most earnest of the Red Cross workers of Oregon City said to the writer yesterday, "I wouldn't want any one to offer my boy a cigarette." She did not approve of the tobacco being put in the Christmas boxes.

NEW DRAFT RULES OUT

Registrant Charged with Burden of Furnishing Information

Copies of the new army draft regulations came off the press Monday for a final reading preparatory to mailing to the local exemption boards throughout the country next week.

Under the new plan the burden of supplying information which will result in his being placed in his proper classification under the selective service law rests squarely upon the individual registrant. All instructions now in the hands of the boards will be annulled upon the receipt of the new regulations, which are greatly reduced in extent and simplified in process.

Included in the new book is everything bearing on the draft process as now organized, from the time the questionnaire is to be sent to each registrant and filled out and returned to the boards, until accepted men are actually in the military service. Each book carries a copy of the statutes and also a verified copy of the master list of the drawing.

The questionnaire is the basis of the plan of grouping registrants in five classes, liable for duty by classes. The boards will be able to classify a man immediately when his questionnaire has been received. The questionnaire process will eliminate from consideration for military service probably 95 per cent of the men who would have been discharged or exempted under the old plan. Under the first call the average board was compelled to examine five men to obtain one for service. In some cases not more than one out of 10 or 12 was sent to the camps.

It is expected that, under the new scheme, the average figures will be reversed and at most not more than one man in five called will fail to pass his physical examination and be rejected.

FALL SOWING UP

Wheat Fields Green and Much New Ground is Plowed

Spring wheat, planted within the past few weeks, is beginning to show above the ground in many parts of the county as a result of recent rains, according to farmers. Steven Hungeate, of Molalla, was in Oregon City and reported a good growth of the spring crop on his farm. The crop is better advanced than in most seasons, farmers say. In the Estacada district, Claude Devore, former county surveyor, estimates that there is a greater acreage of plowed ground this season than there ever has been in that country and this condition is said to prevail very generally throughout the county. With most of the fall crops harvested and stored, much new seed in and much land ready for seed, Clackamas county is starting upon a new farming season that will, in all probability, see many production records broken before next fall, it is said.

CORRESPONDENCE

from Scotts Mills to Wilhoit. It is possible that some leather medals and maybe an iron cross or two will be dashed out to some of the county officials. The job sure is a "hum-dinger."

Oklahoma has all other places skinned a mile in dealing with the I. W. W. That's one time they got the right medicine.

The best newspaper in Clackamas county—The Courier—offers a year's subscription to The Courier and the Oregon Farmer for \$1.00.

MULE SHOE ROUTE

Gravity Scheme Invented by Miners of Tennessee.

Devise Mountain T-Rail Toboggan Which Takes Them to Shaft Openings in a Hurry.

A queer gravity railroad scheme is in use among the miners in the Innan district of Tennessee, not far from the town of South Pittsburg. The region has, by the way, more different kinds of means of transportation than any other in the world. The range is from the steeply inclined cable road that runs up Lookout mountain, not so many miles away, to the idea that the miners evolved for themselves after watching section bosses use gravity cars for coasting down the mountains.

The mines nestle in a valley at the foot of a series of hills, and the railroad track winds its tortuous way from the mine openings up to the heights that lead to the outside world. Many of the miners live in the settlements on the hills, and it is a long way to the shaft openings. One day some bright genius discovered that a mule shoe would fit over the top of the T-rail that marked the course of the railroad.

It was but an inventive step to attach the shoe to a short board and then slip the mountain rail sled over the track, says an exchange. Then all Mr. Miner had to do was to balance himself, pick up his feet and transport miner, pick and dinner bucket down the mountain to work. Of course, it was one way traffic for which the road got no money, but there was no conductor, no strap hanging and no stopping to buy tickets on the mule shoe route.

Early any morning the stranger may see the miners come along with their mule shoe toboggans, calmly take a seat and begin the descent.

A pick handle, stick or the foot serves as a brake to regulate the speed of the incline railway. As the shoes wear smooth from contact with the rail they pick up speed, and at times a couple of daring coal diggers will race on opposite rails from the top to the bottom. But as a rule they take the trip carefully and earnestly so as not to interfere with the rights of the road that may belong to a neighbor before or after them.

The scheme, of course, will not work up hill, and the road has to bring the men back on crowded cars that are not so comfortable or exhilarating as the individual coasters that come scooting down the mountain in the morning.

The number of missing mule shoes when the idea first got vogue was perplexing, and it was some time before the company storekeepers found out why the stocks were being depleted by such odd lots that no amount of shoeing extravagance could account for it.

But the miner in those parts is a law unto himself; since he rose up twenty years ago and put a forcible end to the convict system of working the mines, and the owners mindful of the fact that the state of Tennessee had to keep a standing army for two years to keep the peace at that time, do not intend to let a little thing like a mule shoe create any disturbance.

England's Hungry Birds.

In gardens where no bird-table attracts its feathered pensioners the silent absence of bird-life is almost oppressive; but the birds do not depart before necessity compelled, observes the London Times. Sometimes grim fate stalked in the thin shrubbery whence now and again the household cat has emerged; but more often your garden birds have migrated afield because they had exhausted the possibilities of their home. See down the length of the garden wall a footwide space had been absolutely cleared of dead leaves by blackbird and thrush, who had tossed them to one side in their search for wintering insect life. Look closer and you will see that probing bills have worked a little crevice all the way between the earth and the wall. See, every square inch of uncovered frozen ground is dusty from the innumerable pecks of hungry little beaks.

India's Famines.

Famines in India are growing in number and in intensity. After a careful study of the problem, Sir William Digby says in his "Prosperous British India" that there were in India two famines in the eleventh century, one famine in the thirteenth, three in the fourteenth, three in the sixteenth, three in the seventeenth, four in the eighteenth up to 1745. And under British rule seven famines from 1799 to 1890. And in the nineteenth century thirty-two famines. In the first quarter of the nineteenth century there were five famines, with 1,000,000 deaths; in the second quarter, three famines, with 500,000 deaths; in the third quarter, six famines, with 5,000,000 deaths; and in the fourth quarter, eighteen famines, with 25,000,000 deaths.

The Penalized Civilian.

"Don't you think the modern fashions for men are absurd?"
"Yes. There seems to be an idea that anybody who doesn't wear soldier clothes deserves to look funny."

A Plea.

"I ain't kicking at these meatless days, ma'am, you understand."
"Well, then?"
"Only let's have a prunelless day, too, once in a while."

MCNARY ASKS RELIEF FOR OREGON FARMERS

United States Senator McNary has telegraphed to Food Administrator Hoover declaring that the farmers of Oregon are suffering a material loss from the present situation concerning wheat and asking for relief.

"The want of shipping and mill facilities requires the growers to accept from buyers a portion of the purchase price and to pay 6 per

"THE STORE THAT UNDERSELLS BECAUSE IT SELLS FOR CASH"

Thanksgiving Linens

Thrifty housewives, who are particular as to their table linens and who would replenish their supply of the same at especially attractive prices, cannot well afford to miss this sale.

50c a Yard

will buy a good, durable mercerized damask, full 58 inches wide—you have choice from flower, figure and spot designs.

75c a Yard

will buy 64-inch Mercerized Damask of excellent quality and finish—a great variety of designs to select from.

\$1.00 a Yard

will buy All-linen Damask, 64 inches wide—the most attractive patterns—can't be duplicated by us at the above price.

\$1.25 Dozen

will buy Mercerized Napkins of good size and quality—they come 18 by 18 inches and are hemmed, ready to use.

\$4.95 Each

will buy fine, All-linen Table Cloths, 72 inches square—they are very beautiful and of splendid quality.

\$5.50 Each

will buy Fine All-linen Table Cloths 72 inches square. They come in various patterns and are worth a great deal more than the above price.

GUS KUHN, President
"The Kuppenheimer House in Portland"

"ent interest on the same advanced," Senator McNary pointed out in his telegram. "These conditions are unfair and not conducive to the increase of wheat production. I would suggest that the government employ the revolving fund provided by the food control bill to purchase the farmers' wheat, the government advancing 95 per cent of the purchase price and withholding 5 per cent until delivered and graded at terminal points."

The embargo on wheat went into effect November 6 and regulates the movement of grain to storage at terminal points to prevent great accumulations at Portland, Tacoma, Seattle and Astoria. The object of the embargo is to keep the grain from gathering in such quantities as to allow it to be destroyed by the enemy.

"With approximately 40,000,000 bushels of wheat raised in the northwest this season it is unfair to place a barrier between the farmer and his market. Under present conditions I am told that the mills can not grind more than 25 per cent of the wheat grown, and supplementing that condition with the car shortage the farmer is unable to get his wheat speedily to the terminal points and have it graded by the government, after which he receives the purchase price. Consequently, the only course open to the farmers is to take an advance of \$1.50 per bushel on his wheat and pay interest at the rate of 6 per cent per annum on the advance and await its delivery and grading before receiving the remainder of the purchase price."

"This arrangement costs the farmers of Oregon hundreds of thousands of dollars in loss through the exaction of interest, and will discourage increased production and the availability of future productive lands. The food control bill provides for a revolving fund of several millions of dollars which could be used by the government to purchase the farmers' wheat by paying 95 per cent of the purchase price down and withholding 5 per cent until the wheat is delivered to the terminal points and graded.

"The government could perform this function without pecuniary loss and would prevent the farmers from experiencing losses which are inevitable under present conditions. I believe this plan is fair to all concerned and will meet the approbation of Max Houser, who is wheat administrator for the state."
