

PERMANENT ROAD SYSTEM IS PLANNED

(Continued from Page 1)

one stage of the debate passed the short and ugly word to O. D. Eby, and was called down by the taxpayers for this. Later he declared that if the resolution was adopted he would seek to get an injunction, forbidding the county court from carrying out the plan. Still later he introduced a resolution that supported the majority plan, but that stipulated that parts of the \$60,000 only be spent in road districts that would raise as much again by a special district levy. His resolution got no backing.

The recommendation of the committee of fifteen, that reviewed the budget earlier in the week, was supported as far as the two-mill levy and the granting of \$3,000 to the district attorney's office for the enforcement of the prohibition law went. In approving this allowance of \$3,000 for the district attorney, the taxpayers went on record as demanding that only such portion of this amount as was actually necessary be spent.

Generous cuts were made in many of the county office estimates, particularly in the demands of the sheriff and county court. Estimates in the budget for special office fixtures were also either eliminated or greatly reduced, and the purchasing of supplies was taken from the hands of the in-

dividual county officers and turned over to the county court. Hereafter "postage stamps, pencils, ink and pens" will not be found in the accounts of the several county officers.

A request for \$2,000 for a teachers' convention also went by the board before the budget was finally adopted.

HOW ABOUT CITY'S RIGHT TO WATER?

(Continued from Page 1)

to water" at the basin above the dam, and indefinite water rights may then be developed.

Oregon City should utilize the utmost caution in any sale of the filtration plant to protect the water and power rights that it already has.

Oregon City also has the right to take and develop water power from any water not now put to beneficial uses; and for any municipal purpose may condemn other rights which are already put to beneficial purposes.

Oregon City should not permit the sale of the old pumping station and filtration plant until an adequate emergency supply of water is secured in case of trouble with the pipe line; and it should be borne in mind that there is still question as to the purity of the water delivered through the city mains.

streets to a new site between Third and Fourth streets, either on the west side or east side of Main street and onto such property as shall be agreed upon and will convey to Oregon City the tract of land upon which the house is moved and such additional ground as shall be agreed upon and the City will convey to the Hawley Company the tract of land upon which the said fire house now stands and the Hawley Company will put the said fire house in first-class condition at its own expense.

7. The Hawley Company to begin construction of its proposed plant as soon as may be and continue the same to completion as expeditiously as reasonable and install its machinery as stated. Deed to be delivered in escrow, conditional on new mill being constructed.

Respectfully submitted,

(Signed)
P. METZNER,
H. M. TEMPLETON,
J. F. ALBRIGHT,
Committee.

Subsequent to the filing of this report with the recorder, it was reported that representatives of the Hawley company desired to make certain changes in its wording, but not in its intent.

COW LIKES TWINS

Remarkable Animal at Farm Also Has Penchant for Steers

A. H. Schmidt, a well-known dairy rancher at Sunnyside, in the Clackamas valley, has a cow that has just given birth to its third consecutive pair of twin steer calves. Two years ago the cow produced her first pair of twins, last year she produced a second pair and broke into fame in the columns of the Courier; and Friday of last week she again made her owner a present of a pair of fine young steers. All her calves have been normal and in good health, and have enjoyed life.

Mr. Schmidt says he has about given up expecting a heifer, and now fears that his remarkable cow will never have a daughter to carry on her line in the cattle world. Six steer calves in three years is believed to be a record for production in the Northwest.

LOST—On Highland Road—Wagon Cover. Reasonable reward. Notify Albert Moehnke, Box 102, Rt. 4, Oregon City.

Drugstore Not Sold

Much inconvenience has been caused W. B. Perry, of Milwaukie, by a report printed recently in an unreliable newspaper to the effect that he had sold his store and purchased a place in Oswego. W. B. Perry bought the Milwaukie drugstore about a year ago, and has made it modern and up-to-date in every department. The Oswego store has been bought by C. C. Peery, who formerly had a drugstore in Milwaukie.

OUR ARMY RIFLES

There Are None Better Than Those Made at Springfield.

IN UNCLE SAM'S BIG ARSENAL.

Processes by Which a Billet of the Finest Steel Is Turned Into One of the Famous 30 Caliber Weapons—The Manufacture of Small Arms.

Had Longfellow lived until today and visited the Springfield arsenal he would find that the famous old gun racks which inspired his verses have vanished. Also he would discover many other changes. The double tiers of gun racks that the New England land compared to huge pipe organs are gone, save for a small section which has been preserved in the museum. The "barreled arms" with their highly polished barrels are among the things discarded, too, and as for the pattern of the rifle—well, there have been at least a dozen different styles of firearms produced at the famous armory since Longfellow.

Records have it that there have been sixty distinct types of small arms manufactured at Springfield since its establishment during the Revolutionary war. These range from the old "Brown Bess" and Charleville type with their flint locks and smooth bored barrels to the famous "Springfield" of the war between the states period and the still more famous 30 caliber rifle of today, which has been pronounced the most serviceable small arm in the world.

The Springfield armory, with its various foundries, factories, carpenter shops, barracks and storehouses, has cost the United States government in the neighborhood of \$60,000,000. This expenditure has enabled the ordnance department to supply its enlisted men with the best type of army rifle, revolver and saber at a very small cost.

Moreover, in periods of pressing need the government has never been hampered by red tape, contracts and special legislation in order to arm its forces. During five wars Springfield has been able to turn out enough arms for immediate service, or at least enough to take care of emergencies, though of course the government has purchased rifles from private firms. During the Spanish war this was necessary because of the quick formation of volunteer troops.

The manufacture of a rifle entails dozens of separate operations and consequently dozens of different kinds of machines are necessary. Indeed, there are ninety-three component parts of a rifle, fifty different operations being required to manufacture the barrel alone. And as for the bayonet, there are twelve separate parts to that simple looking portion of a soldier's equipment.

It is difficult to decide which is the most important, the lock, stock or barrel of a rifle, but from the amount of work involved in all probability the barrel is considered of more consequence by the Springfield gunmakers. The material from which the barrels are made appears first as short billets of steel. These are placed in a furnace and subjected to intense heat, and when they become deep orange in color they are removed and placed in another furnace where the heat is even greater. By means of long tongs the steel is removed from this heat and put into a peculiar roller equipped with grooves of eleven different sizes. These rollers are operated under tons of pressure, and gradually the billet is formed into a tapering "blank".

In this process the man in charge of the rolling mill passes the blank through eleven different grooves, running it twice through the last groove, thus executing twelve distinct operations before the barrel is even shaped. The rifling machine is a long, ugly looking affair that moves very slowly. Four riflings are put into the barrel of a gun and six are cut into the short barrels of the automatic revolvers, which are also made at Springfield. Immediately after the rifling the barrel is chambered and sights are put on. Then the glint of polished steel is killed by a process of "browning" the metal.

In the old days the soldier's rifle was polished and buffed until it fairly glittered. Today every metal part is dull, first because the old time glint reflected the sunlight and made the soldier a better mark for his enemy, and also because the browning process protects the metal from the weather.—Edison Monthly.

Provoking a Husband.
A Mohammedan woman cannot of herself separate from her husband without his consent. He may divorce her with a few words spoken by him self. If she is clever, however, she will take him by surprise at an unguarded moment and contrive to do or say something which will make him so angry that before he can exercise sufficient self control to stop himself he has uttered the wished for words.

Clever Chap.
When I had a caller one day my little son came into the room with his cap on. I said, "Why, John, don't you know you should take your cap off when you come into the house?" Quickly taking it off, he said, "Oh, yes, I know, but I left it on so I could tip it to the lady."—Chicago News.

It is not what you lose, but what you have daily to bear, that is hard.—Thackeray.

Eastern Star Elects
Mrs. Nellie M. Cooper was elected worthy matron of Pioneer Chapter No. 28, Order of Eastern Star, at the annual election Tuesday night. Other officers named are: Worthy patron, Charles W. Risley; associate matron, Ethel Griffith; secretary, Agnes Harris; treasurer, Sarah Hagaman; conductress, Marguerite Forbes; and associate conductress, Ethelind Risley.

To The Public

In making our first announcements to the Public through the advertising columns of the newspapers we desire to extend to every one a most cordial invitation to visit and inspect our new and up-to-date banking rooms.

We expect to be open for business Monday, December 20th.

In the relations that will follow our opening for regular business we expect to be a helping force in the development of Clackamas County and Oregon City. We have associated with us men in whom we feel that the Public will have the utmost confidence, and it shall be our aim to merit and always maintain this feeling.

The following men constitute our officers and directors:

LeRoy D. Walker, President

Thos. F. Ryan, Vice-President

John R. Humphrys, Cashier

BOARD OF DIRECTORS

George H. Brown

Charles W. Risley

B. T. McBain

Hugh S. Mount

John R. Humphrys

E. P. Dedman

SHOPLIFTER IS BUSY

County Seat Store Visited by Person With "Taking Ways"

Somebody who has a scheme that beats "do your Christmas shopping early" has paid several visits to the store run by Mayor Jones during the week, and has accumulated a number of Christmas presents that are useful and of more or less value. Among the stolen articles are individual pieces from fancy manicure sets, and military hair brushes from sets of different design. These thefts have utterly spoiled the sets, many of which are of considerable value.

Mayor Jones has notified the local detective bureau, and in addition to that wishes to say that if the person with the taking ways will come to the store, any of the broken sets will be given him or her, as with part of their pieces they cannot be sold. The two military brushes taken, one from each set, are not mated; but the mayor offers to give the rest of the sets away if the crook will only call.

WATER REPORT IN

State Health Officer Reports on Oregon City's New Drink

David N. Roberg, M. D., state health officer, has sent in the following report on water from Oregon City sent to him for analysis on December 9.

Water from fountain reservoir: 28 bacteria per cubic centimeter, no gas or colon bacilli recovered.

Water from bridge pipe: 30 bacteria per cubic centimeter, no gas or colon bacilli recovered on incubation.

Water from Courier hydrant: 25 bacteria per cubic centimeter, no gas or colon bacilli recovered.

Water from Masonic Temple: 26 bacteria per cubic centimeter, no gas or colon bacilli recovered.

It will be noted that the report only shows an incubation test made in one sample. The other samples appear to have been given only a microscopic examination.

...Additional... ...Locals...

G. W. Scramlin, of Macksburg, was in the county seat during the week.

G. E. Brookings, R. S. Coe, C. N. Waite and W. H. Bair, all of Canby, were among those attending the taxpayers' meeting in the county seat this week.

Clarence Eaton, of the county seat, is away on a brief visit out of the state.

Rosecoe Gard, of Watway, was in the county seat during the week.

Candy for the Orphans
The Live Wires of Oregon City will send 100 pounds of candy to the St. Agnes Baby Home for Christmas.
