

Stretch a PEERLESS FENCE Around Your Farm And Quit Worrying

Once your fields are all enclosed with Peerless Fencing and Gates, your fence troubles are over for a long time to come. You are sure to find your animals where you want them and will be free from injuries caused by trying to get through a poor fence.

Good Fences and handy Gates increase the value of your farm, make the work easier and your assistants more contented. The hired man hates to herd stock that has broken out and mend old inefficient fences.

Your money will go farther and you will get better results with Peerless fence. It costs less per rod than other high grade fences and as it is made of the best grade of Open Heart Steel Wire it is free from defects and gives long service. It is heavily galvanized by a special process insuring against rust. The Peerless one-piece crossbar prevents animals crowding it down from the top and pushing through at the bottom. The patented non-slip knot holds the wire in place at all times. Line wires carefully coiled to take care of expansion and contraction.

Peerless Gates

Very few farmers can afford board gates in this age of high price of timber. Peerless steel gates are not only cheaper but they look better and are easier to handle. Heavy tubing frames, filled with special galvanized wire, insures long life. Every part of every Peerless gate is heavily galvanized to prevent rust.

The Peerless Self-Raising Gate

It is one of the best selling styles in our entire line. It is no longer necessary to lug around the old-fashioned sagging, dragging, heavy gates. The Peerless lifts automatically and swings over all obstructions, snow, ice, grass and rubbish.

In addition to being self-raising, it is extra heavy in both frame and filling. Big massive frames of 1 1/2" tubing and close woven No. 9 wire, close mesh filling, insures long life. Every part heavily electro-galvanized—no paint to wash or wear off in a year or two.

Field and Poultry Fences

You will find a style in the Peerless line to meet the requirements of any place on the farm. Hog fences, sheep fences, cattle fences, paddock and poultry fences, all built for the place they are to be used. Big, closely spaced wires keep your animals where you want them and insure long life for the fence.

Lawn Fences

For the man who takes pride in the appearance of the front yard. All made of heavy, extra galvanized wire, extra twisted cables, extra deep crimps in the pickets and extra care in construction. Ornamental gates to match the fence.

Before you buy a rod of fence or a single gate you should send for our big free catalogue and get full details about Peerless fencing and gates.

11th and Main Sts. **FRANK BUSCH** Oregon City, Oregon

THE FASHIONS

New York, December 30, 1915.

With dancing still a popular pastime, indoor and out-of-door skating becoming a more fascinating fad each day, new clothes are constantly in demand. The indoor skating frock might consistently serve as well for afternoon tea, bridge parties, and similar daytime affairs, or it may be as plain as the fancy dictates.

Indoor Skating or Afternoon Frocks

Sleeves and collars are the distinctive features of these costumes. Whether for afternoon or morning wear the collar is high; not necessarily of the choker type, for many a collar high in back is open in front, affording the comfort of the open throat and the chic of the high neck dressing. When the choker is used it is boned as of old, and usually finished around the top with a frill, ruche, circular band of chiffon, picoté, or a narrow strip of fur. On one of the new Paquin models of black satin and velvet the high satin collar is topped with a two-inch-wide circular flounce of chiffon. While trimmings are not elaborate on these gowns, still there are many little details which offer the clever woman with individual ideas a chance to make good use of them. Cloth-covered buttons, silk-covered buttons, in self-tone, or a color that harmonizes, are being used to trim both dresses and suits of the more dressy as well as the simpler types. Both long and three-quarter length sleeves are used in daytime dresses; when the three-quarter length sleeve is used it is cut very full and flares away from the

orchids. For skating, as well as for dancing, pantalettes are practical and comfortable; these are being put out in all shades to match suit or frock;

the simplest of them have merely a frill or two around the ankles in the same color and material as the garment.

Small Hats for Dancing and Skating

For real comfort, both in dancing and skating, the small hat is necessary. This is usually in bright contrast to suit or frock; for instance, there is a charming shade of brick red that is much favored with blue serge and black velvet dresses and suits. A bright current velvet is also favored, and bright coral too is attractive for those who find the shade becoming; and for the more conservative there are wonderful blues, golden browns, and other dark, rich shades, which will harmonize beautifully with broadcloth, satin, velvet, taffeta and the other daytime materials. Machines in high up-standing ruffles, bows, rosettes and folds is being used considerably for these small toques with frills of dark brown or black net or malines, wired into shape, are especially effective for both afternoon and informal evening wear. Quaint neck-fixings often accompany these smart little hats; an upstanding frill or two of the malines to match the hat, banded through the center with a narrow fold of velvet or satin corresponding with the frock, form becoming neck-ruches and afford an effective finish to the costume.

Other Interesting Details

The belt is still a feature of both suit and frock; while belted effects in general have been done to death for the past season or two, still an attractive belt is a convenient and becoming finish to dress or suit, especially with the growing favor of the rounded waistline. Many of the one-piece princess frocks, and many of the Russian models also, show this treatment—a fitted portion at the waistline giving the appearance of a belt or giraffe. It is not unusual to see a chic frock of dark blue serge with a shaped piece of chiffon inserted at the sides giving the effect of a belt; these are beaded or heavily outouched, and are of the same color as the frock, or contrasting. A belt of this kind offers an attractive way of introducing an effective bit of color contrast; for instance, a dark blue, green or gray dress may be outouched in gold or black on one of the dark, old reds, blues or greens.

WESTERN SCENERY FINE

Government Guidebook Lauds Teton Above Swiss Resorts

The view of the Teton peaks from Ashton, Idaho, is superb and doubtless has been the inducement for many a tourist and sportsman to leave the main line for the Teton Range and the Jackson Hole country in pursuit of elk, sheep, trout, and unsurpassed mountain scenery. Owen Wister's "Virginian" was glad to get out of these mountains because, as he explained, "They're most too big." The average American, who has only a vague conception of the natural beauties of the Rocky Mountains and imagines that real alpine forms are found only in Switzerland, must be surprised when he first sees the lofty peaks of the Teton. Even a man who has climbed the Matterhorn would think twice before daring to try Grand Teton. According to local report this peak has been ascended only twice, in 1872 and 1894. As the snow-clad mountains along the Alaskan Archipelago, rising to cloud-reaching heights, stand with their feet bathed in the ocean, so from a viewpoint near Ashton the Teton, towering to the sky, rise from the billowy surface of a sea of golden grain. (Overland Guidebook, Bulletin 612, U. S. G. S.)

Strong and Well As Ever

Fred Smith, 325 Main St., Green Bay, Wis., says: "I suffered a long time with a very weak back. Foley Kidney Pills completely relieved me of all soreness and pain and I now am as strong and well as ever." Winter aggravates symptoms of kidney trouble; cold weather makes aching joints, sore muscles, and irregular bladder action more unbearable. Foley Kidney Pills help the kidneys eliminate pain-causing poisons.—Jones Drug Co.

FIREMEN PLAY SANTA

Alfred Dahlke Remembered by Members of Mountain View Company

Members of Mountain View hose company, of the county seat, played Santa Claus Christmas and took a generous purse and Christmas greetings to Alfred Dahlke in the Oregon City hospital. Mr. Dahlke has been an inmate of the institution since last May, when he was seriously injured by falling from a tree on the site of the new Moose home. Dahlke sustained a broken leg at that time, as well as other injuries. Last week it was found necessary to amputate the leg, and now the injured man is showing signs of permanent improvement. The firemen have been assisting Mr. Dahlke's brother in caring for him, and their Christmas offering was merely an extra token of their good will.

NEW "FORD" STORY

This One is about a Man Who Did "Piece Work" for awhile

A man named Henry Ford applied for enlistment today at the Philadelphia Recruiting office of the United States Marine Corps.

"I have been doing piece work," he told Sergeant Walter E. Carrel who

IN THE DAIRY.

The superior cow will respond to increased food more readily than the inferior cow. No matter how you try to figure it out, you will always find that there is more money in pure bred stock than in scrubs. Use pure bred bulls. Once a cow is out of sympathy with the milker the process of elaboration and concentration is retarded and we are apt to say she "holds up" her milk. Fiber brushes for washing milk utensils should replace the common dishrag. They do better work and are more easily kept clean. In a time of high priced dairy products and high priced feed the dairyman who raises his own feed comes out far ahead of the one who has his feed to buy.

HOW TO HANDLE THE WINTER DAIRY CALF

Whether the winter calf shall go out to pasture next spring sleek and healthy or thin and unthrifty depends entirely upon the care and feed that it receives, writes E. E. Dockwood in *How to Handle the Dairyman*. Many a well born animal falls far short of fulfilling its possibilities solely because of neglect during the first six months.

The calf should be dropped in a clean, well littered box stall and left with its dam for twenty-four hours. During this period it will obtain the first milk from the udder in the natural manner and in such quantities as nature requires.

At the end of twenty-four hours remove the youngster to a clean, dry enclosure and begin to teach it to drink. Some calves take more kindly than others to this process, but usually a few days are sufficient to complete the education. Since under natural conditions any young animal takes a small quantity of food at a time, care must be exercised not to overfeed. Two quarts at a time will be sufficient at first, and this preferably warm from the udder of its dam. At the end of a week or ten days skim milk may be introduced as a portion of the ration.

The dairyman who is anxious to build up his herd quickly should spare no pains in keeping the calves and young heifers growing. Those that have been poorly fed and are stunted in size are far more apt to have trouble at calving than the ones that have been so fed as to be in thrifty condition and large for their age. The illustration shows a thrifty Jersey calf.

gradually diminishing the proportion of new milk until all is from the separator.

At the end of a month or earlier some nicely cured alfalfa or clover hay should be placed before the youngster. Provide a fresh allowance every day, for a calf will not relish that which has been nosed over and at first, too, only the choicest bits will be eaten. Some kind of grain should be given as soon as the animal will take it. Cooked linseed or similar foods are often recommended, but ground oats or a handful of wheat bran fed dry once or twice a day will help to make bone and muscle without the bother of preparing porridge. Where it is obtainable, whole corn can make up a large proportion of the grain ration. The object should be to keep up a steady, thrifty growth without inducing surplus fat.

Scours, that bane of calfhood, may be guarded against by avoiding overfeeding of milk. Increase the quantity gradually, but never allow the animal to gorge itself. With a fresh stock of hay every day and a regular grain ration in addition to its milk, the youngster will grow like a weed.

Still another thing is essential to thrift, and that is a clean, dry, well lighted stall, which is reasonably warm. Cold, wet floors insufficiently provided with bedding soon become foul and are a menace to health. The comfort of all his animals through the cold winter months should be the study of every herdsman. Warm quarters are no more conducive to this end than good, thick, dry beds of straw, and no matter how big the straw-stick in the stall it should be at the vanishing point when another thrashing time rolls around—every bit of it used in providing comfortable beds. "Knee deep in clover" sounds very well, but knee deep in straw when the mercury is dropping to the bottom of the thermometer is just as necessary.

Skin the Milk Clean. If you are selling butter fat you can afford to skin the cream pretty heavy—that is, make it rich in butter fat, for that will mean that you keep more skimmilk on the farm.

questioned him regarding former employment, with a view to determining the man's moral fitness for Uncle Sam's soldiers.

Carrel gasped in amazement and was writing down "f. o. b." Detroit and other irrelevant things on the application plank when Henry Ford supplemented his statement with, "you see I am a molder by trade, and I've been working 'piece-work' on truck castings over at South Bethlehem." Ford could not pass the required examination however, and was rejected by the medical examiner for "weak heart."

"WAR" ENDS QUICKLY

Fall of Fortress Believed Impregnable Discourages Rebels

By the capture and destruction of Fort Riviere, an old stone structure held by superstitious Haitians as impregnable and favored of the revolutionary gods, the rebellious Cacos of northern Haiti were crushed, and the pacification work of the United States Marine Corps in that section of the turbulent little island was finished. Not an American Marine was injured in this dangerous undertaking, according to the official reports just received at headquarters of the Marine Corps.

Fort Riviere was built by the French when aiti was a colonial possession of that country and has been the headquarters of the Caco bandits for years. It has always been a hotbed of revolution, and Marine Corps officers realized that it would have to be captured and destroyed before lasting peace could come to that section.

Major Smedley Darlington Butler led the expedition against Riviere, and to the 5th Company, under Captain William W. Low, was assigned the task of making the main or frontal attack. This company deployed at a distance of about 1200 yards from the fort and advanced upon it in extended order. The Caco fire was continuous but the aim of the attacking party of Marines was so deadly that they were enabled in a very short time to get into position from which the fort could be stormed. With characteristic dash they were upon the works, and although the Cacos stuck to their guns until the Marines had actually entered the fort, they were unable to inflict a single casualty in the ranks of the sea soldiers.

Major Butler then ordered the fort dynamited and when the last stones of the old structure were buried beneath the ruins of Riviere.

CARUS SCHOOL NOTES

The play, "The Courtship of Miles Standish," and basket social, held at Carus schoolhouse December 18, was a decided success in every particular.

The play displayed not only ability on the part of the pupils, but careful attention on the part of the teacher. The principal characters, Lake Smith as Miles Standish; Robert Tremayne as John Alden, and Esther Casto, as Priscilla are especially deserving of praise.

The proceeds of the basket social, \$31, will be used in the purchase of an organ for the schoolhouse.

The pupils neither tardy nor absent during the month of December, are as follows: Emerson Edwards, Minnie Edwards, Emma Josi, Reed Jaggar, Wayne Stewart, George Stew-

art, Lake Smith, Ethel Smith, Harold Casto, Esther Casto, Verna Casto, Gladys Tremayne, Lena Fisher and Richard Guillim.

BOY BADLY HURT

Dynamite Cap Explodes taking Thumb and Two Fingers With It

Lee Hereford found a dynamite cap on the farm of Mr. and Mrs. J. R. Lewis, near Carus, last week, and started to pry it open to discover what was inside. Dewey Thomas and Clarence Green heard the explosion, and rushed the boy to the county seat, where Dr. M. C. Strickland gave him surgical aid. Hereford's face was badly lacerated, and the thumb and two fingers on the lad's left hand were blown off. The boy is eleven years old, and at last reports was recovering from his adventure.
