AGRICULTURE AND SCHOOL

Agriculture and its allied subjects are becoming constantly more popular on the curricula of schools throughout the land, and therefore more in demand by pupils. This demand is felt not in the rural school so much as in the schools of the larger communities and cities, although to a great extent in both.

It is interesting to note that the demand has been great enough here in Oregon City to cause the school superintendent to include in his annual report a recommendation that the subjects directly and indirectly connected with the proper tilling of the soil be included in the work of the local high and grade schools and that the work already undertaken be planned upon a more extensive scale.

Educators everywhere are rapidly falling into the general line of an appreciation of the value of agriculture as a technical study and today some of the finest colleges in the land are practically given over to the work of training agriculturists. Take Cornell university, Purdue and at home the Oregon Agricultural college, one of the largest institutions of higher learning in the northwest.

These lay great stress upon agricultural work and the largest school in each of the colleges is that devoted to agriculture. The result is an annual supply of trained farmers. Farmers who can cope scientifically with the majority of the troublesome questions that confront the farmer.

There is still, in spite of the wonderful advance of agricultural subjects, a marked tendency on the part of the horny handed sons of toil who have gained their only degree through actual labor and first hand contact and battle with the elements and the troubles and the pains of farm life, to scoff at the youth with a college diploma which designates him as a scientific farmer.

This scoffing in certain places even here in Oregon takes the form of ridicule and also the form of direct opposition. Notwithstanding these handicaps the college farmer is an ever increasing element and up-to-the-minute farmers are not the last to see that their sons are fitted by modern methods of instruction and by the excellent experience provided by college farms and experts to take over the management of the farm, the orchard or the dairy the minute he has received his collegiate degree.

These men are real farmers. The old boys whose university training has been confined to the school of hard luck and knocks are real farmers and their efforts are generally very successful. However, the latter class has not been trained in the details and the scientific phases of the business. Its knowledge of modern marketing is as limited, perhaps, as is its knowledge of a thousand other things that the college farmer knows.

The college education is supplementary to that acquired at the high school or the grammar school and any school district, it seems, could do

no greater service for its pupils or for the citizens at large than to encourage to any possible extent, the installation of a course in agriculture as complete and far reaching as means will allow.

The course as offered in a high school or grammar school must necessarily be very much limited as compared with the comprehensive and detailed college courses. Nevertheless, the primary courses are stepping stones to agricultural success and with no other scientific training a boy or girl is vastly better prepared to make the farm a success than without the training.

In Oregon City and elsewhere such suggestions as that made in the report of the local superintendent should be taken for all they are worth. That means that every possible encouragement should be given to the school board in establishing a creditable course and every inducement given the boys and girls of the community to interest themselves in the study of scientific agriculture. It spells future success for the next generations of soil tillers. It spells the defeat of the big city that is draining the best of the rural population from its natural environment and it spells the upbuilding along broader, better lines of agriculture—the world's greatest industry.

THE STREETS

The taxpayers of Oregon City pay \$200 a month to contractors for cleaning the streets of the city and for removing rubbish therefrom. The street committee and the entire council is neglecting its duty in not seeing that the contractors live up to the specifications of their contract, or if the contractors are doing so the aldermen are neglecting their duty in not so altering the contract to provide that the work should at least be done reasonably right.

Any day in the week, especially on the hill, can be seen rubbish piled on the curbs and park strips waiting for the contractors' wagons to remove it. This is not properly attended to and the sacks and boxes of refuse are allowed to remain in sight for days at a time. Over Sunday most any week this stuff is to be seen in the streets. The contractors are not doing what they should do and the council is not doing its duty to the city in not forcing the contractors to do the thing properly.

The same contract covers the cleaning of Main street and the collection of rubbish from all the streets within the city limits. Main street is sadly neglected. It is flushed at the wrong time of day. Cleaning is done after night and by the early hours of the next morning its condition is frightful. This is allowed to remain until the next cleaning hour. The condition should be remedied.

The streets are sprinkled after night, usually about nine o'clock. The street committee of the council and the contractors say that the sprinkling is done merely to aid in

later cleaning. The cleaning is done with a flushing hose and enough water is thereby provided for any purpose. The water spread by the sprinkling cart is wasted by being applied after night. The sprinkling should be done in the morning or afternoon when it will serve its purpose.

The dust and dirt that collects on Main street during the day is lifted and spread in every direction and onto the clothes and into the faces of the citizens; into the stores and onto the stocks along the street, with every little breeze swirling the filthy mess into every nook and corner.

The street committee has been very obstinate in this matter. To the Council's knowledge members of the committee have been requested to remedy the trouble by prominent and lowly taxpayers alike. Not only have taxpayers requested the committee to see to the proper cleaning of Main street, but they have asked that the rubbish be collected from all parts of the town with something like a system. All such requests have been totally ignored by the council's committee.

Pure pigheadedness is responsible for the condition when a simple order would remedy the trouble.

To visitors from other parts of the state Oregon City's streets present a beautiful sight. The sight is a disgrace to the city. The streets are lined with uncollected rubbish from every house and Main street is a putrid mess about half the time.

The members of the street committee and the council as a whole cherishes a fool idea that its sole purpose in office is the exchange of personal banter, the hurling of religious and business attacks and the utter and absolute neglect of about half the business they were elected to perform for the city.

There is more than one way to cause the cleaning of the streets and other things that should be attended to by the council. If the council continues its obstinacy in this matter the voters have a medicine for the cure of such ills in their own hands and surely it will be applied in strong potions if the council does not mend its ways, sacrificing the personal quarrels of its members for the personal business of the population of the city.

A STAR OF HOPE

What can we do for Mexico? In the first place, we can try to understand her. We cannot expect to help Mexico effectively until we first understand her people and their history, institutions and aspirations. What, then, does the history of Mexico teach us? What, for example, is the meaning of the series of revolutions which have been going on in that country for the last hundred years? These questions are asked in the outlook by Charles W. Dabney, president of the University of Cincinnati.

These revolutions, including this last long one, have all, at bottom, been phases of a blind, misguided struggle of a strong, ignorant people for liberty. They sprang from a desire of the common people to realize the benefits of democracy, whose catchwords had reached even to them, but whose terms they only vaguely understood. They constitute a contest against a feudal system approaching slavery. They were chiefly, though not entirely, the strivings of an oppressed people to win for themselves and their children a small place upon the soil of their native land.

These blind efforts have failed of their ends largely because of the ignorance of the people and the lack of true and unselfish leaders. There has never been a middle class in Mexico to supply leaders for the people in their struggles with the feudal lords. Organized public opinion is the only basis for democratic government, and this has never existed in Mexico. The only newspapers are controlled by the government, by the landlords, or by the big corporations. There are no real political parties. The only politics is wholly personal, and the only political organizations are gangs formed to advance the interests of leaders whose names they bear. There are no political campaigns to educate the voters, but only processions and rallies intended to impress them. There is, in fact, no free political discussion of any kind. Elections in Mexico, consequently, are either farces or frauds.

Organized public opinion and the free discussion of political affairs so necessary to free government cannot exist where the masses of people are ignorant. The only solution of the Mexican problem, therefore, will be through the establishment of public schools which will educate the people to know their rights, and train men to lead them in their struggles to win these rights.

In the wretched situation in which we find Mexico at the present time there is one encouraging element. In their dark night there is one bright star. It is the star which through the long and weary night of the last hundred years has ever beckoned them forward. This star is their desire for liberty and education. In spite of their ignorance, stupidity and brutality, this is the one thing for which we must admire the common people of Mexico. Through a century of struggle they have nurtured this desire for education, and have been true to this ideal of self-government. However miserable their present plight, and however outrageous their recent conduct, we must believe that, holding stronger than ever to this desire and this ideal, the people of Mexico are today nearer to the realization of their aspirations than ever before.

WHAT WILL BE THE ISSUE

What is to be made the paramount issue of the campaign by the Republican party, by its presidential nominee and titular leader?

Is it to be the tariff? Democrats are not afraid to go before the country with the results of their enactments on that subject.

Is it to be currency conditions? Every bank vault in the land is bulging and the savings of the millions are proof positive of a general prosperity that the country never knew before.

Is it to be rural credits? The farmers of the land stand ready to make answer to any attack upon that system.

Is it to be the child labor attitude of the Democratic party? Humanity will rise in indignation.

Is it to be the income tax law? Every attack would be checked in its very inception.

Is it to be the Democratic policy on the subject of prison reform, of good roads, of woman suffrage, of civil service, of waterways and flood control, of pensions, of public health, of government employment, of conservation?

Is it to be the parcels post, or the Federal Trade commission that has already proved the wisdom of its advocates?

Is it to be that this country has failed to pour out the blood of its manhood upon European battlefields?

Is it to be that we are not entangled with one side or the other of the players of the ensanguined game upon the incriminated soil of the old world?

Is it to be that Mexico, torn by its own dissensions and intestine distresses, may be left to work out its own salvation, save and only by suggestions from its great neighbor to the north?

Is it to be the breadth of the Democratic party's Americanism?

Is it to be that Mr. Wilson has preferred peace with honor to war with desolation?

Is it to be that the nation's great Executive has followed out the traditions of the republic in the matter of positive neutrality?

Is it to be that a Democratic congress, following out the wishes of the president, has voted hundreds of millions to maintain an army and navy that will guarantee this country's peace forever?

The Democratic administration and congress have bred no scandals, have fostered no corruption, have held aloof from extravagance, have worked hard and devotedly to lofty ideals along constructive lines, and be the issue what their political opponents care to make it, are ready with confidence and the courage of a record of integrity and patriotism to meet it at any time and at any place.

THE STRIKERS

From Los Angeles to Puget Sound and Grays Harbor, including every Pacific coast port, since June 1, a "waterfront" or longshoremen's strike has been waged. While the affair is not yet settled, it is practically over, as the strikers are seeking employment elsewhere.

As far as this port is concerned, there was not the slightest excuse for a waterfront strike. It was declared here merely as a so-called "sympathetic" strike, to assist the longshoremen in other ports.

While it is styled a sympathetic strike, it did not enlist much sympathy from our businessmen, who have been handicapped for a number of years by a much higher wage than was paid elsewhere—a handicap that drove practically all the shipping from this port. The strike, therefore, deserved to fail—as it has failed.

A notable feature in connection with this strike, which perhaps has not been observed by the public, was the total absence of any act of violence or retaliation by the employers.

We have been led to believe, from the records of strikes generally, that unless there were more or less broken heads and bloodshed on both sides, the strike did not amount to much. To a certain extent the present strike has been the exception to the rule.

That there were some desperate and vicious men among the strikers is proved by their actions in throwing stones from bridges on launches transporting non-union men, by their attacks on a few independent workmen, and by the fact that they followed and intimidated the wives of men who were willing to work. It would not have been surprising if, following the custom, the employers had employed "strike-breakers" for the purpose of meeting out to the strikers some of their own medicine.

This was not done; not a single strike-breaker was employed, and no wage higher than that proposed in the new schedule was paid to any of the independent workmen. Over 75 per cent of the independents employed are married men and are tax-payers of this city, and a large per cent of the remainder have been residents here for a long time.—Spectator.

PREPARING THE BOY

When, coincident with the start of the movement for preparedness, tentative suggestions were advanced that there should be universal military training for the youth of the country, politicians, in and out of congress, were afraid to identify themselves with any such proposal. They assumed and many newspapers likewise assumed that the proposal was so radical that there would be a violent outburst of public sentiment against it should it be brought forward as a serious government policy.

How little they understood the real tone and temper of the American people is being demonstrated in many different ways. One of the most striking of these demonstrations was in the recent referendum on preparedness taken by the Chamber of Commerce of the United States.

Of the 359 local boards of trade, chambers of commerce and other business organizations affiliated with the national body, those of twenty-six states voted unanimously in favor of legislation requiring universal military training. In sixteen other states the vote was overwhelmingly favorable. Five states were not represented in the referendum. Alabama was the only state that voted no.

This recalls the fact that the Military Training and Defense Commissions of New York recently submitted to 100 large employers of labor the question whether, other things being equal, they would give preference to the young men who had taken military training, as a matter of cold business without any sentiment about it.

Spreads Easiest—Wears Longest—Looks Best

These are three of the reasons why every property owner who wants the best job of painting, and the one that will put off the need of re-painting for the longest possible time, should have his painter use

SHERWIN-WILLIAMS PAINT
PREPARED (S. W. P.)

It has been the standard of quality ever since it was first put on the market—nearly forty years ago. The Sherwin-Williams Co. safeguard their quality by making all their own linseed oil, owning and operating large zinc and lead mines and smelters, and making their dry colors in the largest and best equipped dry color plant in America. The right results are in the goods.

Use S. W. P. on your house this year and you won't need to paint so often.

HIS TWO BAD DAYS.

Lord Byron Had a Positive Dread of Fridays and Sundays.

The belief in palmists and soothsayers is not, as is sometimes supposed, confined to the ignorant and the credulous. Lord Byron was not a skeptic in these matters. Just before his death, as recorded in "Byron—The Last Phase," by Richard Edgcumbe, "he said he had reflected a great deal on a prediction which had been made to him when a boy by a famed fortune teller in Scotland.

"His mother, who firmly believed in chiromancy and astrology, had sent for this person and desired him to inform him what would be the future destiny of her son. Having examined attentively the palm of his hand, the man looked at him for awhile steadfastly and then with a solemn voice exclaimed, 'Beware of your thirty-seventh year, my young lord, beware!'

"He had entered on his thirty-seventh year on Jan. 22, and it was evident from the emotion with which he related this circumstance that the caution of the palmist had produced a deep impression on his mind, which in many respects was so superstitious that we thought it proper to accuse him of superstition.

"To say the truth," answered his lordship, "I find it equally difficult to know what not to believe. . . . You will, I know, ridicule my belief in lucky and unlucky days, but no consideration can now induce me to undertake anything either on a Friday or a Sunday. I am positive it would terminate unfortunately. Every one of my misfortunes—God knows I have had my share—has happened to be on one of those days."

MORE SOLDIERS LEAVE

Clackamas Camp Deserted for Second Time Since Call Came

With the departure on Tuesday evening of 161 recently enlisted recruits, who have gone to southern California to join the several units of the Oregon troops encamped there,

Camp Withycombe at Clackamas station again assumed the deserted air and appearance that it had when the first levy of troops entrained.

The men who left this week have been recruited since the regular guard units departed and their homes are in every corner of the state. A number come from outside the borders of the state. Captain George H. Schumacher, who has been on duty as camp quartermaster at Camp Withycombe since the first call for troops was sounded which had been made to him when a boy by a famed fortune teller in Scotland.

A number of friends and relatives of the soldiers greeted them before their departure from the camp and a general program for the entertainment of the boys was held in the Y. M. C. A. tent at the camp. It is understood that Captain Kenneth P. Williams, commanding officer for the war department at Camp Withycombe, will remain here for some time in an attempt to enlist still others to fill up the ranks of the O. N. G.

Auto Truck Burns

A valuable automobile truck owned by Williams brothers of Oregon City, was destroyed by fire at Hubbard on Monday, where it was being driven by Dave Williams, one of the brothers, in filling a hauling contract for Marion county. The machine was valued at \$3800 new and had only been used a year. It was insured to the approximate extent of \$2400.

The same truck was to have been used in hauling material for the construction of the new municipal reservoir in Oregon City and if it cannot be replaced the company will find difficulty in living up to the terms of its contract.

Physical fitness is preparedness against disease.

Mary's Kitchen Sink

Mary is the wife of a country storekeeper. She keeps the house, takes care of the children and helps wait on the store. She works hard—harder than her husband, and he works harder than she should.

Up to the present they have had few of the conveniences of life. Water came from a nearby spring, and the housework was done under distressing conditions, owing to the greed of the landlord. He finally agreed to put in the improvements so necessary to human comfort, and Mary's life promised to become easier. The problem was where to put the kitchen sink.

Now Mary had a favorite rocking chair that had a mortgage on the corner. Next came the stove, then her kitchen cabinet. To put the sink in the corner would disturb the rocking chair, and that would never do. The stove and the cabinet could not be moved; therefore it was resolved, after much deliberation, to put the sink in an adjoining room, in a dark corner thirty feet from the stove. This, of course, meant miles of walking every day for Mary, but she could find no other way. But a kindly inclined friend, who could study a job, suggested moving the cabinet just one foot and putting the sink between the stove and the cabinet, where it belonged. It was done, and, behold, Mary is a happy, rested woman.

Now what is the moral of it all? Just this: Too many women walk too much on their jobs, which job consists in getting the housework done in the shortest time and with the least expenditure of energy. Why should Mary—why should any woman—walk half a mile in getting dinner? A pan in one

place, a pot in another, flour, sugar and salt in another. Back and forth, to and fro, and for what? Wearing out shoes, carpets and nerves, just because the kitchen sink has not been put in its place. It's a fine art to have things handy. The thrifty workman studies his work to see how he can cut it down, keeping tools in good condition, but near by.

A certain business man in New York cannot dictate a letter. He writes it out in long hand, and has his stenographer copy it. His telephone is on the wall twenty feet from his desk, which is piled high with old letters and papers. He has to hunt to find things. He is wasting time, nerve force and patience, just because he can't get his kitchen sink adjusted right.

The problem of all business—from running a home to running a railroad—is to cut out waste of time and material, to get kitchen sinks where they belong. Lost motion is costly, it racks the machine, human as well as inanimate. Mary would have carried her kettle from the stove to the sink in the dark corner a dozen times in washing the dishes. Now she doesn't carry it at all. She has solved her problem.

Your problem is the same in essence. Learn how to use the telephone, the typewriter, the carbon sheet. Learn where to keep your tools as well as how to keep them. Study short cuts. Eliminate false steps. Do things the easiest (but the best) way. Save your strength for useful purposes. Study your job, whatever it be, for whether it be big or little, it has the problem of Mary's kitchen sink, and lucky for you if you get it in the right place.
