

About the State

Resume of the News of the Week from All Parts of Oregon

Coos county will this year spend half a million dollars on road work. This money is derived from the regular assessment which brings in \$140,000 and from the bond issue money amounting to \$320,000. The contracts for three big pieces of road work have been let by the county court. All the road improvements are of a nature which will benefit many farmers who have in the past depended to a great extent upon boat travel in carrying their products and milk.

Articles of incorporation for the Walla Walla Canning and Pickling company were filed at Pendleton. The incorporators are E. E. Martin, H. A. Martin, J. Paus and H. S. Murray. The company has bought the Weber-Bussell plant at Freewater and will move the machinery to this point during the next month.

Robert N. Stanfield of Stanfield, Ore., speaker of the Oregon house of representatives, has been named to represent Oregon at the meeting of the council of national defense at Washington, May 2, it was announced at Salem. He plans to leave immediately for Washington.

Polk county farmers are mobilizing all the forces of nature to make this a banner year in the production of food crops. One thousand acres have been promised to the raising of sugar beets; orchard lands, formerly a waste, will be planted to beans and potatoes, and there will be a 50 per cent increase in the acreage planted to beans this year.

Definite decision to discontinue the flax project this year has been made by the flax committee of the Eugene Chamber of Commerce. The campaign was begun several weeks ago to raise \$50,000 capital to finance the crop and provide means for harvesting and treating the fiber. Of this sum \$35,000 was subscribed, but in view of the declaration of war and the demand for food crops, it has been decided to postpone the project for one year at least.

Farmers were warned by C. J. Hurd, state grange deputy, against further shipment of hay, owing to a serious shortage in the available supply. Mr. Hurd stated that he has never known such a scarcity of hay in the Willamette valley, there not being enough to last until the new crop is cut. Inferior hay is selling at \$25 a ton.

Society Brand Clothes

THE spirit of outdoors in this belt-style — something of the snap and dash of youthful energy and aliveness. Has all-around unattached belt, shoulder yoke, inverted pleat patch pockets with flaps to button, inverted center pleat above and below belt and small pleats forming below yoke and above and below belt; features that give it a loose, sportsmanlike effect.

We've had a lot of new fabrics made up for us by the designers who set the season's styles and they're in now — these Society Brand Clothes — for your inspection. A wise suggestion is: Come early. The prices —

DISEASES OF CALVES.

Cause, Prevention and Treatment of Infectious Dysentery.
(Prepared by United States department of agriculture.)

Diarrhea, or scours, is probably the most common disease of calves. Great care must be taken at all times to prevent this condition, as it always hinders the growth and development of the animal and in addition is often hard to cure, says farmers' bulletin 777. This disease is the result of disturbance of the digestive apparatus of

WEIGHING MILK TO FEED TO CALVES.

the calf and may be caused in a number of ways, the more important of which are the following: Irregular feeding, overfeeding, sudden change of feed, fermented feeds, feeding dirty or sour milk or milk of diseased cows, the use of dirty milk pails or feed boxes, and damp, dirty stables. As soon as scours is discovered it is best to separate the affected calf from the others and carefully disinfect the pen. The feed should be reduced immediately at least one-half, milk pails cleaned and sterilized, feed boxes cleaned and disinfected and any other causes mentioned above eliminated.

A number of preparations are used to treat this disease, a few of the more common of which are blood meal, tea-spoonful at a feed; white of egg; lime-water, etc. A dose of four drops of formalin to each quart of milk has been used to advantage, and a drench of three ounces of castor oil followed by a teaspoonful of a mixture of one part salol and two of subnitrate of bismuth also is recommended. Ordinary white clay, mixed with water to the consistency of thick cream and given in doses of quarter or even half a pint three times a day, has been used recently, with excellent effect.

White scours, or infectious dysentery of the calf, generally affects a number of calves in a lot and first appears shortly after birth as a diarrhea with light colored offensive droppings. During the course of this disease the calf wants to sleep all the time and cannot be induced to suck or drink. It is also very much weakened by the disease and usually dies within three or four days. There is no specific method of curing the disease known to the department. Ordinary white clay mixed with water to the consistency of thick cream and given in doses of a quarter or even half a pint three times a day has been found by veterinarians to be very valuable. Manufacturers of biological products, however, are now selling a potent serum which they claim to be effective in both prevention and cure.

Prevention consists in the use of sanitary precautions, such as clean, dry and disinfected pens for calving and careful disinfection of the udder of the calf at birth, painting the cord with tincture of iodine and tying it with silk thread. As this disease is so serious a character that it may cause the loss of a season's crop of calves, the details for the control of an outbreak should be referred to the state live stock official or to a qualified veterinarian in the community.

Ration For Sows.

In districts where corn is plentiful there is a temptation to feed sows almost exclusively upon corn. Such a method of feeding cannot give the best results. Many farmers and breeders will not appreciate this. It is also rather too fattening and heating to feed large quantities to a sow during gestation. A ration of equal parts ground corn, ground oats and wheat middlings, with a supplement of tankage, linseed meal or skim milk, is a good one.

Keep Cows Off Soft Pasture.

We sometimes think we are gaining by letting the cows go out to pasture early. But just go around after the cows and see the big holes they tramp in the earth, and every step they take they push some good grass roots down where they won't get out all summer. Wait a bit longer. That will be where you will be the gainer.

SALMON PRICE IS HIGH

Oregon City Fishermen Will Sell at Same Price as Paid on Columbia
Oregon City fishermen and those who make the annual haul of Chinook from the Willamette near this city will profit from the action of the Columbia river salmon packers, who last week "went the fishermen one better" in the matter of the prices to be paid for Chinook salmon during the spring season, which opened here as well as on the Columbia at noon

Tuesday. As a result, the highest prices ever known in the history of the industry will probably be paid for Chinooks during the 1917 season. At a meeting of the Clackamas County Fishermen's union some time ago the fish buyers who operate in this field, including two Portland marketmen and the Pillar Rock cannery people, agreed to meet the price paid for fish by the Columbia river packers. Thus, local fishermen will undoubtedly reap a harvest.

A few weeks ago the Columbia River Fishermen's Protective union set the price for chinooks at 10 cents a pound flat. There have been rumors that the packers would fix the figure at 8 cents a pound, but they sprang a surprise last week when they not only approved the union price of 10 cents a pound flat, but also agreed to pay the fishermen bonuses in proportion to their season's catches.

Under this plan a fisherman who catches three tons of fish for the season will receive \$5 a ton extra; those getting five tons will receive \$10 a ton extra; those getting eight tons will receive \$12 a ton extra, and those whose catches are 10 tons or more are to be paid a dividend or premium of \$15 a ton.

There are many rumors afloat as to why these bonuses, which were not asked by the fishermen, are to be paid. Some say the market demand at high figures, as well as the increased cost of net and all supplies which the fishermen use warrant the advance, while others aver the bonus is directed at certain packing companies and dealers who had previously agreed to the union scale.

The prices paid during the 1916 season were 6 cents a pound for chinooks weighing under 25 pounds each and 7½ cents a pound for those weighing 25 pounds or over.

Hard Work for Women

It is a question if women doing men's work deserve particular sympathy, for it is doubtful if there is any work that is harder than everyday housework. Overwork tells on the kidneys, and when the kidneys are affected one looks and feels older than the actual years. Mrs. A. G. Wells, R. R. 5, Rocky Mount, N. C., writes: "I cannot praise Foley Kidney Pills enough for the wonderful benefit I have derived from their use for a short while."—Jones Drug Co.

PRESIDENT APPEALS

Men, Women and Children on Farms Asked to Help

My Fellow Countrymen:

The entrance of our own beloved country into the grim and terrible war for democracy and human rights which has shaken the world creates so many problems of national life and action which call for immediate consideration and settlement that I hope you will permit me to address to you a few words of earnest counsel and appeal with regard to them.

We are rapidly putting our navy upon an effective war footing and are about to create and equip a great army, but these are the simplest parts of the great task to which we have addressed ourselves. There is not a single selfish element, so far as I can see, in the cause we are fighting for. We are fighting for what we believe and wish to be the rights of mankind and for the future peace and security of the world. To do this great thing worthily and successfully we must devote ourselves to the service without regard to profit or material advantage and with an energy and intelligence that will rise to the level of the enterprise itself. We must realize to the full how great the task is and how many things, how many kinds and elements of capacity and service and self-sacrifice, it involves.

These, then, are the things we must do, and do well, besides fighting,—the things without which mere fighting would be fruitless: We must supply abundant food for ourselves and for our armies and our seamen not only, but also for a large part of the nations with whom we have now made common cause, in whose support and by whose sides we shall be fighting.

We must supply ships by the hundreds out of our shipyards to carry to the other side of the sea, submarines or no submarines, what will every day be needed there, and abundant materials out of our fields and our mines and our factories with which not only to clothe and equip our own forces on land and sea but also to clothe and support our people for whom the gallant fellows under arms can no longer work, to help clothe and equip the armies with which we are cooperating in Europe, and to keep the looms and manufacturing factories in raw material; coal to keep the fires going in ships at sea and in the furnaces of hundreds of factories across the sea; steel out of which to make arms and ammunition both here and there; rails for worn-out railways back of the fighting fronts; locomotives and rolling stock to take the place of those every day going to pieces; mules, horses, cattle for labor and for military service; everything with which the people of England and France and Italy and Russia have usually supplied themselves but cannot now afford the men, the materials, or the machinery to make.

It is evident to every thinking man that our industries, on the farms, in the shipyards, in the mines, in the factories, must be made more prolific and more efficient than ever and that they must be more economically managed and better adapted to the particular requirements of our task than they have been; and what I want to say is that the men and the women who devote their thought and their energy to these things will be serving the country and conducting the fight for peace and freedom just as truly and just as effectively as the men on the battlefield or in the trenches. The industrial forces of the country, men and women alike,

will be a great national, a great international, Service Army,—a notable and honored host engaged in the service of the nation and the world, the efficient friends and saviors of free men everywhere. Thousands, nay, hundreds of thousands, of men otherwise liable to military service will of right and of necessity be excused from that service and assigned to the fundamental, sustaining work of the fields and factories and mines, and they will be as much part of the great patriotic forces of the nation as the men under fire.

I take the liberty, therefore, of addressing this word to the farmers of the country and to all who work on the farms: The supreme need of our own nation and of the nations with which we are cooperating is an abundance of supplies, and especially of food stuffs. The importance of an adequate food supply, especially for the present year, is superlative. Without abundant food, alike for the armies and the peoples now at war, the whole great enterprise upon which we have embarked will break down and fail. The world's food reserves are low. Not only during the present emergency but for some time after peace shall have come both our own people and a large proportion of the people of Europe must rely upon the harvests in America. Upon the farmers of this country, therefore, in large measure, rests the fate of this war and the fate of the nations. May the nation not count upon them to omit no step that will increase the production of their land or that will bring about the most effective cooperation in the sale and distribution of their products? The time is short. It is of the most imperative importance that everything possible be done and done immediately to make sure of large harvests. I call upon young men and old alike and upon the able-bodied boys of the land to accept and act upon this duty,—to turn in hosts to the farms and make certain that no pains and no labor is lacking in this great matter.

The government of the United States and the governments of the several states stand ready to cooperate. They will do everything possible to assist farmers in securing an adequate supply of seed, an adequate force of laborers when they are most needed, at harvest time, and the means of expediting shipments of fertilizers and farm machinery, as well as of crops themselves when harvested. The course of trade shall be as unhampered as it is possible to make it and there shall be no unwarranted manipulation of the nation's food supply by those who handle it on its way to the consumer. This is our opportunity to demonstrate the efficiency of a great democracy and we shall not fall short of it!

This let me say to the middlemen of every sort, whether they are handling our food stuffs or our raw materials of manufacture or the products of our mills and factories: The eyes of the country will be especially upon you. This is your opportunity for signal service, efficient and disinterested. The country expects you, as it expects all others, to forego unusual profits, to organize and expedite shipments of supplies of every kind, but especially of food, with an eye to the service you are rendering and in the spirit of those who enlist in the ranks, for their people, not for themselves. I shall confidently expect you to deserve and win the confidence of people of every sort and station.

To the men who run the railways of the country, whether they be managers or operative employees, let me say that the railways are the arteries of the nation's life and that upon them rest the immense responsibility of seeing to it that those arteries suffer no obstruction of any kind, no inefficiency or slackened power. To the merchant let me suggest the mot-

TECHNICAL DEPARTMENT BULLETIN

TO ALL DEALERS:

For your information we wish to advise that in our experiments and tests here at the factory with our new Eight Cylinder car, we have been able to secure uniformly better results with Standard Oil Company's Zerolene motor lubricant than with any other which we have used.

Please understand, however, that we do not wish this to be construed as an attempt on our part to dictate the brand of oil which you should use, but merely to call your attention to the fact that this particular brand has given us better results than any others which we have tried, and are giving you this for your information.

Yours very truly,

THE PERLESS MOTOR CAR COMPANY

BECAUSE Zerolene is correctly refined from asphalt-base crude, it maintains its lubricating body and value at cylinder heat, thus forming a perfect piston seal, reducing friction, and enabling the motor to develop its maximum power. Zerolene is the oil for your car.

For sale by dealers everywhere and at our Service Stations.
STANDARD OIL COMPANY
(California)

Pain

Here is a message to suffering women, from Mrs. Kathryn Edwards, of R. F. D. 4, Washington Court House, Ohio. "I am glad to tell, and have told many women, what I suffered before I knew of Cardui and the great benefit to be derived from this remedy. A few years ago I became practically helpless..."

TAKE

Card-u-i

The Woman's Tonic

"I was very weak," Mrs. Edwards goes on to say, "and could not sleep without suffering great pain... Nothing seemed to help me until I heard of Cardui and began the use of it... I gradually gained my strength... I am now able to do all my work." If you need a tonic take Cardui. It is for women. It acts gently and reliably and will probably help you as it helped this lady.
