HUGHES VS. WILSON

When a man so truly big and one so firmly grounded in the principles of republicanism as is Hugh Hume, editor of the Portland Spectator, draws in the horns that have carried him successful through a score of political campaigns—and to his credit it be said that he usually fought on the winning side—there is reason for the multitudes to pause and to think. Few Oregon editors believe more sincerely in the eternal good of republicanism and few can bring what good they find in the grand old party to the public attention with more convincing, honest argument than Mr. Hume. The Courier, therefore, doubly appreciates the following from Portland's most talented scribe.

"Looking back on the events of the past few months, The Spectator thinks it was God's blessing that Mr. Wilson was elected. The Spectator opposed Mr. Wilson, and took some credit for winning the electoral vote of Oregon for Judge Hughes. But it was well for Oregon, well for Mr. Hughes, and well for the nation that owing to a miserable fight of not very important politicians in California Mr. Wilson was retained in office.

"We can imagine the condition of the country if Mr. Hughes had been elected and had asked congress to do what Mr. Wilson found was unavoidable. The war, we firmly believe, would not have been regarded as the nation's, but as Mr. Hughes' war. Copperheadism would have been rampant; dissension would have maimed the country's efficiency; pacifists would have become active participants in plots to embarrass the government; and conscription rioters, encouraged by the support received from a press chagrined and enraged by the defeat of its candidate, would have caused a civil turmoil more calamitous to the country than the foreign war.

"Because a state of war was proclaimed by Mr. Wilson, the nation is satisfied that the conflict was inevitable. And the nation is giving, and will continue to give, President Wilson its earnest, whole-hearted, patriotic support in the prosecution of the war. That this sort of support—that calls for a supreme sacrifice—would have been withheld from a republican administration, there is little doubt. So it is fortunate for Mr. Hughes and all of us that Mr. Hughes was not elected."

BUYING AND SELLING

"You have before you today indisputable proof that advertising is of direct benefit to you, the buyer of advertised goods. You have been astonished to find at this time of generally high prices that it is the nationally advertised articles that are keeping down their prices to you and keeping their quality up to the established standard. Further, it is advertising that has made it possible as well as obligatory for manufacturers to keep the quality up. Advertising has brought them ever increasing demand. This has made it possible for them to expand and perfect their manufacturing plants to a point where their goods are made by the most efficient, and therefore the most economical and least wasteful methods."

"This is the unsolicited statement of one of America's greatest advertisers. If a firm that spends a million dollars a year on advertising finds that it pays them big dividends to do so, the value of advertising as a commodity for the little business man is self-evident. That it is sound business judgment to patronize advertisers selling advertised goods stands to reason. The admissions of this firm contain a moral for buyer and seller alike. Take note!

GREETINGS AT SUTHERLIN

Throughout Oregon one will probably not find anywhere the same spirit of enterprise that is manifested in the good will of the people of Sutherlin. It stands out prominently as a town with a future, because it is so

evident that Sutherlin's population is of the right sort.

Motoring through the state, one is greeted at the entrance to most towns with a sign: "Notice! Slow down to 15 miles." Sutherlin, with the chief thoroughfares paved—an exception to the rule in towns of Sutherlin's size—and with evidence of progress and prosperity on every side, greets the traveler on her well-made roads with a huge sign painted upon a great red sheet-iron apple, (apples being Sutherlin's stock in trade), reading: "Welcome to Sutherlin. Please slow down to 15 miles."

The effect upon the motorist is obvious. The order to slow down does not meet with the success that the bland Sutherlin request does. We much prefer Sutherlin's style of hospitality.

SPEAKING OF SLACKERS

In every town, just as in every lodge or church or club, there are a few people who, the slackers always say, "think they run things," or "want to run things."

Let us consider these men and women who "think they run things," or "want to run things." Are they not the people who, when there is a lot of committee or detail work to be done, are the only ones who will do it? Are they not the only ones who are willing to give their time and their energy for a public movement for the good of all? When you analyze the whole thing are not these people, who "think they run things" about the only people who have enough interest in their town or their lodge or their church to spend their time and money for the good of others?

If you are honest with yourself you will admit they are. The next time you hear any one talk about the other fellow running the lodge or the town or the church or the fire company ask him to come to the next meeting of one of these organizations; see that he is appointed on one of the committees which have a lot of work for the good of the order or the town and watch him try to crawl out of the job of working for nothing for the good of others. You will find that he is perfectly willing to let the hard workers "think they run things," or "run things."

The father of 12 children, himself one of a family of 12, has heart trouble and is unable to support the family. Enough said!

All previous American records for the consumption of whiskey and tobacco have been broken this year. Must be a heap of encouragement for the prohibition party.

The East Clackamas fair starts next Wednesday. Eastern Clackamas farmers will make the fair a success—they always have. The county fair will be better for having the exhibits from the eastern county farms.

We haven't heard of the government asking wholesale grocers to feed, free of cost, any unit of the great army, nor asking ship builders to float a fleet for nothing. Yet some of the friends of the newspapers would have them donate their bread earning capacities to pushing another liberty loan. Consistency, thou art a gem!

There is more Catarrh in this section of the country than all other diseases put together, and for years it was supposed to be incurable. Doctors prescribed local remedies, and by constantly failing to cure with local treatment, pronounced it incurable. Catarrh is a local disease, greatly influenced by constitutional conditions and therefore requires constitutional treatment. Hall's Catarrh Medicine, manufactured by P. J. Cheney & Co., Toledo, Ohio, is a constitutional remedy, it is taken internally and acts thru the blood on the Mucous Surface of the System. One Hundred Dollars reward is offered for any case that Hall's Catarrh Medicine fails to cure. Send for circulars and testimonials.

P. J. CHENEY & CO., Toledo, Ohio. Sold by Druggists, 75c. Hall's Family Pills for constipation.

MODERN WARSHIPS

And the Brave Old Wooden Fighters of a Century Ago.

THEIR BIG GUNS COMPARED.

The Old Constitution's Twenty-four Pounders Were Great Cannon, but a Modern Monster Gun Could Fire One of Them Bodily Ten Miles.

The frigate Constitution, fighter of thirty-nine battles and winner of every one of them, today offers the student an exceptional opportunity to compare the naval fighting machine of a hundred years ago with the superread naught of the hour. Peacefully floating at a wharf in the Charlestown (Mass.) navy yard, "Old Ironsides" speaks volumes to the thoughtful visitor who has perhaps just a few minutes before stepped down the gangway of a modern ship.

Aside from the vastly different methods of placing the guns, perhaps the most striking contrast between the naval architecture of a century ago and that of today is seen in the actual structure of the hull and superstructure. The warship of today has not a piece of wood visible, with the possible exception of the deck, which is wood over a steel foundation. Stripped for action, the modern fighting craft presents a positively naked appearance with every movable object cast overboard or stowed away.

The Constitution, on the other hand, presents a bewildering array of rigging and spars, and she is wholly constructed of wood. A single modern shell exploding under her or on her deck would do as much damage probably as an entire broadside from a ship similar to the Guerriere. This vast change in the design is, of course, due in large measure to the introduction of steam as a means of propulsion. Following this the all steel hull was introduced.

The gun deck of the Constitution stirs the imagination perhaps still more than does the spar deck. Topped by a low ceiling, which makes one want to stoop as he walks, this deck savors of a prison dungeon. Glancing at the row of long twenty-four pounders, thirty in number, one can readily picture the smoke filled atmosphere, the terrible din, the sweating, half naked figures straining to reload the clumsy pieces of ordnance and ever and anon a shot crashing through the futile wooden wall, sending splinters in all directions.

Stepping from the gun deck and thence into the Rhoda Island to this old time chamber of horrors, the visitor cannot fail to wonder how in her famous engagement the Constitution suffered a loss of but seven killed and seven wounded out of a crew of 456 officers and men. Perhaps the answer is found in the inaccuracy of the guns and poor marksmanship of the gunners. More likely, however, it is due to the fact that the explosive shell had not then been invented. Aside from the splinters, a twenty-four pound shot through the hull stood little chance of doing really great damage unless it struck a mast, a gunner or the gun carriage itself.

The guns of the Constitution's day had an effective range of possibly a mile. Although history tells us that the real execution was done at ranges of from one to three hundred yards. Think of the engagements of modern warships, wherein naval duels are fought at ten miles' range and where the opposing ships are actually out of sight from the gun deck and barely visible from the fighting tops! Think of guns aimed with the aid of mathematics! What marvelous strides science has made in times of peace and in the short space of a hundred years!

As an interesting comparison of the guns of today with those of 1812 we may call attention to the fact that while the total broadside discharge of the Constitution's battery would amount to 884 pounds of metal, a single projectile from one of our coast defense mortars weighs half a ton.

Even more striking is the fact that the projectile from a modern fourteen inch piece of ordnance such as that carried by the superdreadnaughts weighs practically as much as one of the big guns of the Constitution. In other words, instead of hurling a small ball of iron at its enemy the modern fighter of the sea could actually throw one of the Constitution's cannons itself at the opponent were the cannon of suitable shape and form.

And, furthermore, the explosive charge in the projectile would be greater by far in power than the entire charge used in the old cannon. This means that the modern engine of destruction actually takes a mass of steel equal in weight to the old gun loaded with high explosive and lands this entire mass on the deck or inside the hull of the enemy's ship, where it explodes.—Thomas Stanley Curtis in Popular Science Monthly.

A Huge Dinner Can.

"What's that?" asked the visitor, indicating a gasometer. "Dinner can," replied the Scot. "Some can, too," was the astonished rejoinder. "You must have communal dinners in this town."—Youth's Companion.

Within the Limit.

Bilton—Aren't you spending too much? Mrs. Bilton—No, dear; you don't make enough for me to do that.—Life.

Folly is the one thing that all persons wish to cover up and that none can conceal.

Prolific Berkshires

We have a choice lot of June farrow sows and gilts for sale. We have pigs from three different sires, including Driver Baron Duke No. 201084, champion and grand champion at the Northwest Stock Show, Portland, Dec., 1916. All stock registered in purchaser's name. If you are looking for good hogs for breeding purposes you will find them at Hood View farm, O. C. Rt. 3, Bx. 72. HARRIS & SONS.

TURKISH "JUSTICE."

Curious Case of a Man Who Was Guilty of Having a Daughter.

Dr. Clarke, a famous traveler of about a century ago, tells of the following remarkable case, which was tried at the Greek Island of Cos: A young man desperately in love with a girl of Stanchio eagerly sought to marry her, but his proposals were rejected. In consequence of his disappointment he bought some poison and destroyed himself. The Turkish police instantly arrested the father of the young woman as the cause, by implication, of the man's death. Under the fifth species of homicide he became, therefore, amenable for this act of suicide.

When the case came before the magistrate it was argued literally by the accused that "if he the accused had not had a daughter the deceased would not have fallen in love; consequently he would not have been disappointed; consequently he would not have swallowed poison; consequently he would not have died. But he (the accused) had a daughter, and the deceased had fallen in love, and had been disappointed, and had swallowed poison, and had died."

Upon all these accounts he was called upon to pay the price of the young man's life, and this, being fixed at the sum of 80 piasters, was accordingly exacted.

FOUR TYPES OF MEN.

French Method of Picking Soldiers For Special Lines of Work.

"A good judge of human nature is born and not made," declared Dr. G. Stanley Hall, president of Clark university. "Baseball scouts are not able to tell how they pick men; neither can any employer tell how he picks his men."

Dr. Hall described the French system of dividing men into four general types and selecting them for particular positions in the army accordingly. He said: "First.—The digestive type. It is characteristic of the heavy jaw, broad abdominal region. Such men require more food, need it regularly, must be well fed. Such men are best on the defensive. They are hard to dislodge from the trenches.

"Second.—The respiratory type. Nostrils and ears are large; large, long chest; demand plenty of pure air; get restive under confinement. Such men are selected for work on high mountains. They are good in the charge, in making an attack. Such men exclusively are selected for the aviation corps.

"Third.—The muscular type. Head is square, limbs long and strong, body short. This type is good for the bayonet charge in the artillery service.

"Fourth.—The nervous type. Large head tapers down to a sharp jaw. Such men have power to draw upon their reserves. They can get their second wind. The really great are men of this type. Along with this type is closely associated a willingness to sacrifice self for the good of others.

"Children and animals are guided by the desire to gain pleasure and avoid pain. As they grow older they should learn to bear present pain for future pleasure."—Pittsburgh Gazette-Times.

Hard to Hear Airplane at Sea.

While it is widely known that an airplane can be heard from some distance off on land, on water the lapping of the waves and the whistling of the wind through the rigging and superstructure of a vessel make it almost impossible to hear the power plant of an approaching seaplane until it is almost overhead; hence the submarine plying the surface has slight warning of an impending seaplane attack until it is often too late to escape.—Scientific American.

Heart and Lungs.

The action of the heart, lungs and digestive system is involuntary, for the reason that it is indispensable to life and must be carried on under all circumstances. If a man had to think of his heart or had to remember that he must breathe or that his food must digest he would have no time to do anything else, and if by chance he should forget to keep his heart going or his lungs in operation he would fall dead on the spot.

The Most Accurate Frontier.

As an instance of the jealousy existing in the relations between Norway and Sweden it may be noted that the boundary line between the two countries is the most minutely exact in Europe. In every parish touched by the line there is deposited an elaborate plan which is renewed every ten years, the whole of the work of surveying, etc., being carefully repeated each time.

Local Pride.

"What is the name of this street?" "This is Broadway," replied the proud citizen of Dubuqueville.

"Ah! Named in honor of the famous thoroughfare, I presume?"

"Why, sir, this is the famous thoroughfare!"—Birmingham Age-Herald.

Save Their Breath.

Allice—I wouldn't marry a lawyer. He would always be arguing with me. Marie—Nonsense! Lawyers don't argue unless there's a fee in sight.—Boston Transcript.

Never Bothered Since.

After suffering with terrible pains in his back and around his kidneys for eight years, and after having tried several doctors and different medicines, Alvis Souers, Ade, Ind., writes: "Foley Kidney Pills were recommended to me and the first bottle removed the pain. After taking three bottles the bloating was all gone and has never bothered me since." When relief can be had so quickly why not banish backache, rheumatic pains, stiff and swollen joints caused by disordered kidneys?—Jones Drug Co.

WHAT IS THERE ABOUT GRAVELY TOBACCO TO KEEP ITS REPUTATION GROWING FOR 85 YEARS?

YOU CAN EASILY FIND OUT, NOW THAT YOU CAN GET IT FRESH AND GOOD, THAT IT IS A HUMDINGER

GRAVELY'S CELEBRATED Chewing Plug

BEFORE THE INVENTION OF OUR PATENT AIR-PROOF POUCH GRAVELY PLUG TOBACCO MADE STRICTLY FOR ITS CHEWING QUALITY WOULD NOT KEEP FRESH IN THIS SECTION. NOW THE PATENT POUCH KEEPS IT FRESH AND CLEAN AND GOOD. A LITTLE CHEW OF GRAVELY IS ENOUGH AND LASTS LONGER THAN A BIG CHEW OF ORDINARY PLUG.

J.B. Gravelly Tobacco Co. Danvers, Vt.

IT MUST BE—BILLY POSTER'S BILLBOARD NEWS MEETS WITH POPULAR APPROVAL

EXPECT SECOND DROP IN PRICES OF FLOUR

Following a drop of 40 cents a barrel in flour, a further drop may be expected in the immediate future. When the regulations of the food administration become operative, the price of flour will automatically take its place in relation to the price of the wheat. Millers will be allowed an average of 25 cents profit on a barrel and 50 cents profit on a ton of feed.

The average producer in the northwest will receive \$1.84 a bushel, f. o. b., for his wheat. If there are five bushels to the barrel and 25 cents a bushel is allowed the miller for profit, a barrel of wheat should be sold wholesale at \$10 when the government machinery begins operating. Millers, however, decline to say what the price may be, simply stating that the price has been dropped 40 cents a barrel and a further cut will be made. The drop of 40 cents was ordered to take effect at once. In Minneapolis, for the highest grade of patents, a cut of 50 cents was made Saturday.

A basis price of \$2.20 a bushel in Chicago for No. 1 grade would be \$1.90 in this section, because of the 30 cents a bushel freight charge to Chicago. There will be little of this grade harvested in the northwest. The No. 1 grade heretofore in the northwest has been the No. 2 grade in export. Under the new government grading only a small part will go as No. 2, for the bulk will be No. 3 and No. 4 grade. The No. 1 grade is 61 pounds to the bushel and the No. 2 is 58 pounds to the bushel. The No. 3 grade is 6 cents less than basic, and, figured on the freight cost, it amounts to \$1.84 a bushel, which will be the average price the average producer in this section will receive.

An effort is being made by growers and bankers in eastern Washington to have the establishment of a basic wheat port on the Pacific coast, believing that it will save millions of dollars to the farmers. Under the

present rate, with the basic price as \$2.20 at Chicago, northwestern producers consider themselves discriminated against, contending that tide water is entitled to consideration in fixing a basic price for the Pacific northwest.

Max H. Houser, of the food administration, says that he does not care to discuss the situation.

"I will say this, however," stated Mr. Houser: "last May or June I asked the question regarding whether tide water would be considered, and my question was answered by another. 'Why is the northwest wheat being shipped to the Atlantic?'"

Further than that Mr. Houser would make no comment. The deduction drawn is that those who fixed the price of wheat concluded that there is not enough tonnage on the Pacific coast to make the geographic position of the northwest producers worth considering, otherwise northwest wheat would not have been shipped overland across the continent.

FORD FOR SALE—5 passenger Ford fully equipped; new tires, Hassler shocks, speedometer, Presto lights, extra braces to front. Price \$325.00, cash. Apply 806 Washington street, Oregon City.

The Canning Season is Now in Full Force
