

SEA SLUG STORIES

Thrilling Tales of U Boat Hunting, Told by an American Boy Who Served For Months With the British Patrol and Who Did the Thrilling and Perilous Work That Is Now Being Done by Hundreds of Other American Boys.

The Hero.

"The sky was red over his head," said one of the men he picked up, "because of the vast number of illuminating bombs and rockets the Hun were using, besides the searchlights and the shells that were bursting. There was light enough to take a moving picture of the scene."

"Any human being would have run, but that chap's a devil or a god. He shouted orders to his men as though he were at maneuvers and fished us out of the water with a boat hook as coolly as if he were merely picking up a buoy and couldn't understand what all the racket was about."

"After he got me on board I saw him fall with the blood spurting from his leg. He grabbed a bit of rope, made a tourniquet himself, using the barrel of his revolver to twist it tight, and directed the work until he had all of us on board."

"How we ever penetrated that barrier of fire and lead and steel I don't know, but we came through and limped into port under our own power."

As I say, I was not on this expedition, and what few details other than those I heard I am not at liberty to tell.

Well, to go back to the monitor. We all went aboard and were given breakfast. In the ward room one of the officers told us some interesting things about their work.

"These tubs," he explained, referring to the monitors, "are not armored. We carry heavy guns forward, and the barbette is the only part of the craft that is protected by armor plate."

"All along the coast we have buoys anchored to mark fire positions. We cruise along, pick up one of the buoys and let go a few shots. Of course we know the range and where the German forts and batteries are, although we can't see them. Sometimes we have hydroplanes observing for us, so that we can tell whether we're on the target, but we have been doing it so long and we have the coast so well plotted and the buoys so carefully plotted that it's mostly a matter of mathematics."

"It's all very impersonal. We drop a few shells into a harbor or fort, then move on to a new position and drop a few more."

"The Germans don't seem to have any planes along the coast here, and they aren't able to reply with any accuracy whatever, for they can't see us, as we always pick a day with a slight mist or haze or operate at night."

"But the other day we dropped down the coast for a little party, when all of a sudden, after our first shot, a shell plumped into the water just beyond us. We let go another, and the second German shell fell just a little short. Both were in line."

"We thought it was luck, so we moved to a new position. The same thing happened, only this time one shell came on board and did some damage and hurt some of our crew. Of course we thought the Hun must have some planes up giving the batteries our range, but we couldn't spot one anywhere. This sort of thing kept up all morning until it became positively unattractive. The day was heavy with fog, making aerial observation difficult."

How the Germans Got the Range.

"Then an officer who had been an observer in the Russo-Japanese war explained it. The Japanese had used a system at Port Arthur to locate some hidden Russian batteries that this chap said the Germans must be employing, and I guess he was right. In fact, we know now that he was. How we confirmed our original opinion I cannot tell."

"Every one familiar with the principles of artillery fire knows that a shell does not travel in a straight line. It travels in a curve called the trajectory. Elevation a gun of a given caliber to a certain angle and fire it and the trajectory will always be practically the same."

After Our First Shot a Shell Plumped Into the Water Just Beyond Us.

same. The curve varies constantly, becoming steeper as the velocity of the shell decreases and it begins to be affected more and more by gravity.

The Mathematics of It.

"Now, what the Germans had done was this. They erected a series of gauge screens—at least three—between us and a battery which we were as-

tronomers to shell. To hit the target our shells must pass through these screens. Electrical timing devices indicated the length of time the projectile required to travel between the screens, and of course the distance was already known."

"This gave the Germans the velocity of the shell when it reached the screen. The holes it made in the screens gave them three or more points in the curve. They could tell from the explosion the size of the shell approximately. This would enable them to know the velocity with which the shell would leave the gun."

"With these elements—a section of the trajectory, the velocity of the shell when it reached the screens and a knowledge of the initial velocity of a certain sized shell—they had more than enough data to figure out exactly where the projectile came from."

"In fact, they could check themselves on it, because they could plot the whole curve from the section they had with their knowledge of the velocity, and they could figure the straight distance from the velocity of the shell when it reached the screens and the velocity they knew it must have when it left the muzzle of the cannon on board the monitor."

"The best proof that the system worked was the fact that, no matter where we moved to, their shots straddled us, and besides the one which came on board us one of our other ships got a shell in the boiler room."

"Well, somebody's always taking the joy out of life, as we say in America."

After mess we left the monitor, the little damage which had been done the M. L. that ran up on the shelf having been repaired. Before we went down over the rim of the horizon we saw our friend the monitor steaming as fast as she could go toward some vessels flying the Dutch flag.

"D— all neutrals anyway," said the Brass Hat. He didn't mean that there was anything particularly reprehensible in being neutral, but if there were no neutrals we'd always know who to fire on and who not to. The trouble is that a lot of ships are cruising around under neutral flags and scattering mines in their wake."

"We're always nervous when we're in waters a neutral has just traversed. Down at Dover— But I'm getting ahead of myself. I will tell about what happened at Dover in my next article."

The fourth and concluding article of this series will appear soon. It is entitled

No. 4—The Dangers of Dover.

The Dangers of Dover

PROLOGUE.

The author of this series of four articles is a young American, who has spent most of his time since the war started with the British patrol fleet.

He has accumulated a remarkable collection of anecdotes incident to this exciting branch of the service, and many of these were personal adventures in which he took part and which make one of the stirring narratives to come out of the war. He recently returned to the United States to assist the American navy in organizing the same branch of the service.

Of course some of his experiences, of military value to the enemy, cannot be related. At the request of the service publication of his name is withheld.

So far as the navy is concerned, the destroyers are bearing the brunt of this war.

Their speed, their shallow draft, their ability to approach like a thief in the night, smash their enemy and get away again make them capable of being used where a heavier, more powerful vessel would be valueless.

Besides, the loss of a destroyer is as nothing compared to the loss of a battleship or a cruiser.

The best opportunity I had to observe the destroyers was at Dover. I ate dinner one night in the ward room of a destroyer of the tribal class. I will not mention the names of the officers whose guest I was, because that would denote the name of the craft, and the admiralty would not want it known in view of what happened.

"The worst danger to us," said one of these fine fellows, "is the mines. The destroyers are used to a certain extent to search out mine fields, and it is a filthy business."

"Yes, and overhauling and searching 'neutral' merchant ships is not what you'd call a safety first occupation," said another officer.

"I'd rather tackle a Hun any day than a 'neutral,'" said the first speaker. "There has been nothing but 'neutral' ships in Dover since the war began, and yet we frequently find German mines laid inside the harbor near the entrance."

"Those are probably laid by submarines," said some one, "because every neutral ship that comes in and even all approaching the harbor are carefully examined and thoroughly searched."

"Yes, and a lot of good it does. You remember Commander —? He had just searched a neutral merchantman and was trailing along astern of her. Thought he'd keep her in sight a few hours, just to set his mind easy. He was steaming in her very wake, perhaps half a mile astern, when—bang!"

The Destroyer Sank, Nose Down.

a mine blew in his starboard bow, and only the men who were on deck at the time got away before the destroyer sank nose down."

They had invited me to make a run with them. I had an admiralty pass, and I could have done so—would have done it the next morning, in fact—except that unexpectedly I was called upon to make a test trip with some modified U boat chasers, and I had to call it off. Later I wanted to decorate that U boat chaser which kept me home with the Victoria cross. It saved my life.

I finished my work the next day by about 4 o'clock in the afternoon. As I was walking toward the destroyer basin I met a naval constructor, who said:

"One of the destroyers bumped a mine this morning. Want to go down and see what it does to them?"

The Narrow Escape.

I was interested to see the effect of the explosion and told him so. All destroyers of a certain class look practically alike, and I didn't notice what boat it was as I went on board the battered hull that was lying canted away over to one side with her stern all crumpled and sagging as though her back had been broken. It looked almost as if it were going to drop off.

"They hit it just abreast of the ward room on the starboard side," said my guide. "At least that's where the force of the explosion seems to have caught her."

We stooped low in order to get through the twisted, fallen steel arch of the doorway. I have never seen so horrible a sight as the ward room. Out of the battered, splattered mess there stared a face that told me for the first time it was the vessel on which I had eaten dinner the night before.

For the most part the men with whom I had chatted and been friendly were not recognizable. The room had not been cleaned up as yet, and, besides the horror of it, it made me physically sick. It is no wonder that the British navy damns the "neutral."

There is no question at all but that ships under neutral flags sow mines. On this particular occasion—it was a Thursday—five of the six mines which were placed almost every Wednesday had been found and picked up. That sixth mine was time and again the cause of a tragedy.

Well, every single officer, with the exception of the navigating officer, who

I Went Spinning Off the Bridge Like a Catapult.

had been on the bridge, was in the ward room when the explosion came, and not one of them survived. It would be useless to describe the appearance of that room. The living, breathing human beings who had filled it the night before with laughter and courage and hope were one shapeless mass—part of the twisted, broken steel. And they never had a chance to fight. Death came to them without warning and without giving them the opportunity so much desired to strike a blow for Britain in the going. But that is part of war as it is fought to day.

I went up to the hospital to see the navigating officer, and, swathed in bandages and suffering from terrible burns, he told me all he knew of what had happened.

"We were running along at fair speed," he said, "with most of the crew on deck and watching out sharp, for I knew that sixth mine hadn't been picked up, and it's pretty safe to count on six being laid here every Wednesday. The rest of the officers were below, poor chaps! Not one of them left, they tell me."

(Continued Next Week)

SOLDIERS TO ENTRAIN ON TOMORROW MORNING

County Clerk Harrington has received from Adjutant General George A. White—instructions for entraining the 21 men who will leave here this week for the national army cantonment at American Lake. The quota in turn was instructed by County Clerk Harrington to report to Sheriff Wilson by 2 o'clock on Thursday afternoon. The men will leave Oregon City tomorrow morning at 7:06. Maynard Cole and Ferdinand A. Scott have been given charge of the quota. Maynard Cole was an alternate in the last call. All the men will be entertained in Oregon City this evening, perhaps with a reception by the Commercial club. Sheriff Wilson will be the guiding genius of the party as soon as the men have reported here today.

The following men have been notified to report to the sheriff today: Maynard Cole, Milwaukie, R. D. 2; Ferdinand A. Scott, Oregon City; Charles William Elsner, Bull Run; Rafaelo Tunzi, Canby; Anton I. Olson, Mount Angel; Otto Hogg, Oregon City; Ralph Mandeville, Canby; Abraham Ameen, Milwaukie; Roy Funk, Boring; Edward Pamperin, Sherwood; Louis Fredrick Kieling, Aurora; Edward Hoffman, Sandy; Jake Albert Mitts, Canby; Frank Linhart, Sandy; William Dale, Estacada; Ernest J. Baurer, Sherwood, R. D. 2; Frank Thurman Hunter, Clackamas, R. D. 1; Conrad Cockerline, Estacada; William Walch, Gresham; Albert W. Frederick, Oregon City; Carl Baxter Mumpore, Oregon City, R. D. 2.

Alternates: Harry Crawford Reid, Estacada; Ennis Sherman Townsend, Bull Run; Walter Sidney Smith, Mullino; Ray Leigh Francisco, Oregon City; Ardius Stefani, Molalla.

PRIZE WINNING SWINE GET GOOD YARD PRICE

Conditions in the north Portland yards at the week's opening have been healthy. The tone of the market throughout is good and the receipts show a volume of business that is very gratifying.

The string of cattle offered in the yards, generally speaking, was better than those offered at the week's opening previous, but not any better than those coming at the close of the week. The general range of prices in the cattle pens is the same as for the previous week with breeder trading very active. The following quotations are current: best beef steers, \$9.00-\$9.75; good beef steers, \$7.50-\$8.75; best beef cows, \$6.75-\$7.50; ordinary cows, \$4-\$6.75; best heifers, \$7-\$8; bulls, \$4-\$6.50; calves, \$7-\$9.50; stockers and feeders, \$4-\$7.25.

The hog alleys were treated to a little aristocratic society this week by the presentation of the prize winners from the Salem fair, and the porkers of the Marion county pig club, some of which, although they came here on contract, are said to have brought as high as 20 cents a pound. Aside from this, one load of strictly prime light packers crossed the scales at \$18.50, which was the top for the day. The general market range is as follows: prime light, \$18.15-\$18.25; prime heavy, \$18-\$18.15; pigs, \$16-\$17.25; bulk, \$18-\$18.25.

The volume of the business in the sheep houses continues to increase at a satisfactory rate, but the increase does not keep pace with the demand. The packers are in need of more butcher stuff, and the demand for feeders and ewes is very strong. The quotations have advanced a notch, and still the sales are practically all made at the top end of the quotations as on the previous week. The following figures are current: western lambs, \$13.60-\$14; valley lambs, \$12.75-\$13.50; yearlings, \$11.25-\$11.50; ewes, \$8-\$9.50.

HE PAID HIS SUB.

R. S. Coe of Canby hitched a couple of fine Dobbin's to the surrey last week and invited "Ma" Coe to a trip to Oregon City, where they paid their respects and their subscription to The Courier. It was the first time in 10 years Mr. Coe had driven to the county seat. The trains carry him for less and he saves the horses to make a hundred turns an hour in a 10-acre corn patch. He used to plow corn furrows 3/4 of a mile long back in Iowa or some such noted state.

"Price of everything but whittling has gone up," opines this enterprising farmer, "but I'm going to steal a march on the rest of you by saving so much on whittling that I can afford to miss the delights of an automobile and buy an airplane when the war is over and the government has one to sell." Mr. Coe has a fine home, lives in a good town and reads The Courier, the best weekly newspaper in Oregon.

Worth Their Weight in Gold

No man can do his best when he suffers from backache, rheumatic pains, swollen joints, sore muscles or other symptoms of kidney trouble. B. H. Stone, 840 N. 2d St., Reading, Pa., writes: "I contracted a most severe case of kidney trouble. I gradually grew worse and for months was unable to attend to business. I began to use Foley Kidney Pills and soon found the pains were gone and I have had no aches since. They have been worth their weight in gold to me."—Jones Drug Co.

tice of the Peace Sivers Monday afternoon and fined \$10 each for hunting upon a game refuge. The three Italians were arrested by Deputy Warden L. S. Ellerman and had two Chinese pheasants in their possession. The guns were held by the justice of the peace until the men get a permit from Multnomah county, where they live, to redeem them. It was charged that the men had been warned that they were shooting on a game refuge.

STEPHENS BUYS BANK

Laswell Becomes Cashier of Estacada Banking House

Irwin D. Wright has resigned as director and cashier of the Estacada State bank, his interest having been purchased by H. C. Stephens, who will assume the management. A. L. Laswell, assistant cashier, has been appointed cashier.

Mr. Wright has bought a 200-acre alfalfa ranch near Denio, Harney county, where he expects to reside after November 1.

Mr. Stephens came to the Estacada section from Pendleton, where he was vice-president of the American National bank. Before that he was secretary and cashier of the Interstate Savings bank of Denver. He represents

The Oregon Agricultural College

Where trained specialists with modern laboratories and adequate equipment give instruction leading to collegiate degrees in the following schools:

AGRICULTURE, with 15 departments; **COMMERCE**, with 4 departments; **ENGINEERING**, with 6 departments, including Civil, Electrical, Highway, Industrial Arts, Irrigation, and Mechanical Engineering; **FORESTRY**, including Logging Engineering.

HOME ECONOMICS, with 4 major departments, including training in the Practice House;

MINING, with three departments, including Chemical Engineering;

PHARMACY.

THE SCHOOL OF MUSIC, offers instruction in the principal departments of vocal and instrumental music.

THE MILITARY DEPARTMENT, enrolled 1085 cadets in 1916-17, and won recommendation for O. A. C. from the Western Department of the U. S. War Department as one of the fittest "distinguished institutions" of higher learning. All cadets will be furnished complete uniforms by the U. S. Government and the junior and senior cadets, enrolled in the R. O. T. C., will be given commutation for subsistence, as well as all transportation and subsistence at the six weeks' summer camp. **REGISTRATION BEGINS OCTOBER 2, 1917.** Information on request. Address, Registrar, Oregon Agricultural College, Corvallis, Oregon.

sented Clackamas county in the last legislature and is president of the East Clackamas County fair.

Miss Roe Elected

Miss Lucile Roe has been elected a teacher of grades at the Eastham school and took up her duties on Monday morning. The Portland

young woman was a substitute teacher here last year after Miss Lillian Holsworth left for the east. Miss Roe's task will mean that congestion in the lower grades of the school will be relieved.
