REDUCING FOOD PRICES

High prices for food tend to create high prices on everything else. The cost of producing any article is largely determined by the cost of subsistence of the workers that create it. When food prices are high the ultimate result is to check consumption on the part of large classes of people who have not had corresponding advances in wages. Export trade is restricted, construction work held up, business suffers, and unemployment results. So to relieve the present unparalleled high cost of living, the first thing to do is to produce reasonable food prices.

Some people think government price fixing will do it. It may help in extreme cases. Yet in the long run you can't beat the law of supply and demand. The supply is at present insufficient for the demand, aggravated as this is and will be by the disorganization of European industry.

The farmer's interests must be considered. In the past the small farmer's profit did not fairly compensate him for his effort and investment. If he is not able to secure a fair return people will not stay on the farms. So either production must be made more economical on the present aggregate of product, or a greater product must be turned out on the present level of expense. It will take the best scientific and organizing ability in the country to solve this problem. The ordinary observer, however, can see many respects in which the work of food production is not efficiently organized.

The past fifty years have seen a complete revolution in most lines of industry. Labor saving machinery, systematic organization of great units of production, technical education for managers, training of workers in scientific methods, efficiency systems, these have kept down the costs of factory production. Labor is paid a great deal more than formerly, but in many cases production costs less than it did 50 years ago.

HOME TOWN FEELING

Some people play a lone hand. They do not form much attachment to the place where they live, and do not particularly regret leaving it if they have to move. And no one weeps any tears when they pack up and go. They respond to no calls for co-operation. And no one feels any particular desire to help them along. The community gains little from their presence. And a town made up of that kind of people is a dead one.

Then there are those who feel an intense loyalty to their home town and all the people living there, to all its undertakings and enterprises. It is partly sentimental affection, partly a keen sense of the practical business value of co-operation and team work. Oregon City has a lot of these folks. Its progress is due to them. They feel a cordial interest in all our townspeople. You can depend upon their hearty support for any community project. Every local enterprise has their backing. In so far as that idea prevails, the town will realize its possibilities.

When this spirit exists, it is a genuine pleasure to give preference in all business dealings and purchase of material, to anything that comes from the home town. If a suit of clothes sold here is just as good for the same money, always buy it. One might well buy it, even if it was a little inferior. But thanks to our splendidly stocked stores, that sacrifice is rarely necessary. It is poor community spirit and deficient team work to buy stuff out of town unless we know from investigation that it is not to be had at home.

When a town has this unified, co-operative, reciprocity spirit of team work, you can't stop it. The compact mass of people working for common ends, will beat out a greater population whose energies are divided and scattered.

American soldiers unconquerable? The girls at home don't think so.

About now the popcorn men advertise a very snappy product.

As soap costs more, the boys kindly consent to economize on it.

Restriction on sweets off, but pour enough coffee to flavor the sugar.

Pen greater than sword? At present price of bacon the pig-pen sure is.

Some men feel that they worked very hard for the war, as their wives helped regularly at the Red Cross.

The girls will all welcome the soldiers back by consenting to be taken out to the ice-cream joints and picture shows.

With the knitting for the soldiers about over, some of the popular men are in deadly peril of getting embroidered neckties.

Labor can't come down because prices are so high, and prices can't come down because labor costs so much.

An increase in the number of tramps is predicted. Probably escaping from places where they were insulted by offers of work.

House Builder asks what is the largest building in the world heated by hot air? Far as we know, it's the Capitol at Washington.

Patriotic Citizen writes to ask if he must stand up in bed when the young folks next door play the "Star Spangled Banner" at midnight?
