

FAMOUS DAWSON IS NEARING END

(Continued from Page 1)

ice. Many who went by boats were caught by the ice before they reached Dawson and were frozen in, and many who went down on the ice in the winter were caught in the break-up and found death in the Yukon rather than fortunes in the Klondike, while the rapids claimed many a life and outfit.

There were pilots at the rapids who would take boats through the whirlpool for \$30 apiece, at owner's risk, but there were thousands of men who had put their last dollar in to outfits and they had to do their own steering.

A business man in Dawson, one of the first to reach the Klondike, was a passenger on our boat into Dawson, and he told me many interesting stories of the mad rush. He said he remembered one man in particular. He came in from Seattle with a boat and a good outfit and the rapids got them. He got ashore and at once started back for Seattle, one thousand miles, for another. The second time a pilot took the boat through and lost it. Then the owner put a gun to his head and ended it all—as hundreds of others did.

But notwithstanding the terrible obstacles thousands and thousands reached the Klondike fields and went mad with the gold fever. Everywhere along the river the ground was rich with precious metal. Men fought for it, killed for it and died for it. Gold was rich in almost every foot of ground. Great fortunes were made in a few weeks and fabulous prices were paid for claims.

Then Dawson sprang up and became a roaring, crazy hell.

Today it is dying a natural death. Only a few men are working claims now—a pitiful few of those who came too late, and who are picking the bones.

After the claims gradually played out, the Guggenheims put dredges in and took untold wealth out of the river. They are yet working, just marking time for the finish.

The only possible thing that can save Dawson from being but a mark for what it once was is a new strike somewhere where she will be the outfitting point. This is the forlorn hope that many cling to.

Two and a half years ago a well-equipped outfit went into the unmapped wilds northwest of Dawson. They went with supplies for three years. Nothing has been heard of them since. Some figure they must have made a strike or they would have returned, but old prospectors, the old "sour dough" boys shake their heads and say the expedition is either a failure or the men have perished.

I talked with an old-timer about it one night and he said in his 20 years in British Canada and Alaska he had never known a strike to be hushed.

"When they make a strike they stake, work it for a while, then some of them come in," said he. "I never knew it to fail. They want to start a stampede. They want company, want the rush to come and a camp to follow. Of all the God-forsaken lives white men ever lived that of the prospector is the worst."

There is hardly a building in all Dawson that sets level. When they were built they were plumb and square enough, but they are built on ice, and the succeeding summers have heaved them and twisted them until one would think an earthquake must have jarred the whole city.

Under a mid-summer sun that works a shift of about 20 hours a day, vegetation springs up everywhere and grows wonderfully fast and luxuriant, and one almost doubts the ice box stories told of the Klondike. But dig down three feet and the ground is frozen solid. It has been frozen so for centuries and it never will thaw out until the climate of Alaska changes.

And this frozen ground goes down a hundred feet or more—how much more none know, for none have ever gone beyond it. For centuries the terrible cold of winter has frozen it deeper and deeper until practically the whole of Alaska is an iceberg—a great frozen country. Nature evidently wanted to protect her gold, and she did a very good job.

Almost anywhere along the Yukon from White Horse to Nome, gold can be panned from the river bank. It can be panned from nearly every canyon and the banks of nearly every creek.

It can be found in sufficient quantities to make day wages. Gold seems to be almost everywhere in Alaska. But places that could and would be worked to advantage in California or anywhere else are worthless in Alaska, for the reason that the expense and hardships are too great.

One might make wages for three months sluicing on the river, but what is he going to do the other nine months? The ground is not rich enough to pay for the expensive winter thawing process, one cannot take out enough during the three months to live on the other nine, so while there is gold almost everywhere and claims open for anyone no one wants them—they are not rich enough for Alaska.

The day of the gold pan, the sluice box, the rocker and the windlass and bucket has said goodnight. The future mining in Alaska will be by hydraulic, quartz mills and dredging, and the outlook is none too bright for even these big business propositions. With the exception of Juneau, every mining proposition I have so far seen or heard about is running out, and the companies operating them are quitting them. And no new ones are being developed.

It is said prospectors have found what appear to be wonderfully rich quartz veins in the mountains north of Dawson, but no matter how rich the samples assay, the claims are practically worthless.

An old-timer told me that in Ogilvie mountains, northeast of Dawson, he had some of the richest quartz veins that ever laid out of doors. "I have had many assays made; I have plenty more samples or I will take any man to the mine and let him pick his samples," said he.

"It is richer than the Treadwell ever was," he continued, "Yet it isn't worth a dollar. I couldn't give anyone my claims if they had to do the assessment work on them. When I made he strike I thought at last I had found my luck. And I can't give it away."

The reason of this is the great expense of putting in the necessary mill equipment to run such a mine. Were it close to the river, the men would take a chance, but back there in the mountains, no trails, over the roughest country in Alaska—just think of getting mine machinery into such a place, and then packing in every ounce of everything necessary to operate that mine.

Such a proposition makes capitalists hesitate. No matter how rich the indications are; or how large the mining company, the men simply won't take the chances, for the mine may be spotted, the rich samples may be in pockets, and after the great expense of putting in machinery, it might not make good. The risks are too great, and for this reason no doubt many valuable quartz mines in Alaska will never be developed.

I was in Dawson only two days, but it was long enough—I was glad to leave. There is something about a town that is going back that gives one the willies. I had gone aboard with my things and returned for a last look around, when a middle-aged man asked me how far down the river I was going. I told him to Nome, and then he asked me if I would do him a great favor. He pointed to a suitcase and large bag on shore and asked if I would not take them to my stateroom.

"I am going to beat it down to Marshall," he explained, "Going to stow away, but I can't do it with that bunch of dry goods. If you'll put it in your stateroom then I will be all right."

I told him I would think it over, and let him know when I came back. I was willing to help an unfortunate, but I was afraid of some "game." Then, too, I didn't know what kind of inspection the custom officials might give us, so I decided not to take any more baggage or chances. So I went on board with the last minute crowd, and saw nothing more of the man or his baggage.

COUNTY DEFENSE COUNCIL COUNCIL

(Continued from Page 1)

mitties on food conservation will be among the important ones to be appointed, and industry, manufacture, agriculture, shipping, etc., will each be handled by a separate committee.

In outlining the important purposes of the council, Bruce Dennis said: "There is perhaps no immediate work before the council, but it should be like the old shotgun behind the door—always prepared. In the course of the war there will be scores of important matters directly affecting the success of the nation at war that can only be handled by the concerted, cooperative methods that will be employed by the county council of defense. Such things as food conservation can be more effectively be carried out and enforced by a body with the authority which this one will have. Food cards will soon be furnished the organization and in its hands will be the duty of conserving the county food supply. Therefore, with such an organization in each county the national food conservation program will be carried out and the national council's work will be done in a more effective way than would be possible with any other form of organization."

This is a unit in a line of authority that extends from President Wilson himself down to the many precincts in each county, which may have their own defense council committees.

In Judge Anderson's charge was left the further perfection of the organization and the business of appointing chairmen for the several committees which will be necessary. Such committees will not be local in any manner and their activities and membership will extend throughout the county.

Judge Anderson will call another meeting of the council when he has completed the appointment of committee chairmen and when work is at hand to be done by the council. In accepting the unanimous election to the chairmanship of the council, Judge Anderson said:

"I feel that I have plenty to do aside from the work of this council, but the patriotic and important work which will devolve upon it makes it proper for me to accept with the guarantee, of course, that all agencies and individuals will cooperate in the work at hand with a willingness and a desire to make the activities of the council successful in every way."

Such minor expenses as may necessarily be incurred by the council will be paid through appropriations made by the county court. This plan is said to be the only fair means of dividing such incidental expense, inasmuch as the work of the council will be for the benefit of every taxpayer equally.

GAS COMPANY KICKS

Asks Commission for Modification of Standards Fixed

Representing that under its present oil gas standard it is suffering heavy financial losses each year, the Portland Gas & Coke company Tuesday applied to the public service commission for modifications of the standard fixed by the commission on the subject. The standard now is 570 British thermal units per cubic foot, and the company wants it reduced to between 525 and 550. The company declares that during the years 1915 and 1916 it lost annually \$50,000, and during 1917 its loss will be \$120,000. Most of the loss is due to the present standard, it is alleged. The company also asks that the rule requiring meters to be tested every five years be changed so as to require the re-test every 30 years.

CRUSHING A LANGUAGE.

Under the Russian Empire No One Dared to Speak Ukrainian.

Ukrainian differs from Great Russian fully as much as Dutch does from German. In fact, the highest learned body in the Russian empire, the Petrograd Imperial academy, admitted a few years ago that the Ukrainians possessed a distinct language and culture of their own. That, however, was not the Russian government's view of the matter.

"There never has been, is not and never will be a Ukrainian language or nationality," declared a Russian minister of state in 1893, and this was merely the formal expression of what generations of Russian bureaucrats had already considered as axiomatic. All official business was carried on in Russian, a language almost completely unintelligible to Ukrainians. All Ukrainian writings, save certain old books of devotion, were rigidly proscribed, and Ukrainian education was so strictly prohibited that in many parts of the Russian Ukraine even today there are fewer schools than there were two centuries ago.

The only way for a talented Ukrainian to sprig his ideas was in Russian, and many of the greatest names in Russian literature, such as Gogol, Kostomarov, etc., were really Ukrainians forced to employ this alien tongue. What happened to those who dared clothe their thoughts in the native idiom may be judged by the terrible fate of the greatest of all Ukrainian poets, Taras Shevchenko. For the "abominable crime" of having composed some exquisite little verses celebrating the natural beauties of his Ukrainian homeland this youthful genius was sentenced to ten years' penal servitude in Siberia and returned from his hell of suffering a broken, prematurely old man, only to die.—T. Lothrop Stoddard in Century.

TO PURIFY WATER.

Two Safe Ways by Which Typhoid Germs May Be Destroyed.

One cannot judge the purity of water by its looks. Things visible to the naked eye are usually harmless. The invisible germs of disease are by far the more injurious to human beings.

Most people feel that drinking water is safe to use if it is cool, clear, sparkling and free from color or odor. Such is not the case. Even the sparkle may be due to decomposition products. The bubbling brook usually contains more dangerous bacteria than standing water. Streams do not purify themselves by flowing over their rocky beds. The mistaken notion that they do is responsible for a great deal of vacation typhoid fever.

The safest method of destroying disease germs in water is by actual boiling. Boiling the water for five minutes will kill the germs of typhoid and all other diseases. Chlorine may also be used to disinfect the water.

A stock solution is made by taking a level teaspoonful of full strength chloride of lime and rubbing it up to a thin paste free from lumps in a teaspoon with a little water. This should then be made up to a cupful and diluted with three more cupfuls of water and then poured into a bottle and tightly corked. Add a teaspoonful of this stock solution to each two gallon pail of drinking water, thoroughly mixing it and allowing it to stand for ten minutes. This will give about one-half part of free chlorine to a million parts of water, which will destroy all typhoid or dysentery producing germs.—Exchange.

Where Miners Lose Their Nerve.

Men accustomed to working in mines cannot stand great heights. It is almost an invariable rule that a miner will get dizzy and uneasy if you take him to a high place, such as a monument or the top of a house, and will try to get back to earth as soon as possible. And yet he can stand underground on the edge of a 500 foot shaft, look down into the black abyss and never feel a tremor. He can climb up the face of a shaft, knowing that there is a straight drop of a thousand feet under him, and feel perfectly at home.—Exchange.

Flies and Infantile Paralysis.

Experts in infecting mosquitoes, houseflies and bluebottle flies with the virus of infantile paralysis, conducted by Drs. Hideo Noguchi and Rotsuburo Kudo in the laboratories of the Rockefeller Institute for Medical Research and reported by the Journal of Experimental Medicine, result in proof that these insects are incapable of infecting monkeys with this disease.

Force and Perseverance.

There are two ways of attaining an important end—force and perseverance. Force falls to the lot only of the privileged few, but austere and sustained perseverance can be practiced by the most insignificant. Its silent power grows irresistible with time.—Mme. Swetchine.

No Judge.

"Is your daughter getting on well with her music?" "I dunno," replied Mr. Cumrox. "Every time Gladys starts a tune that sounds pretty good to me mother says she is displaying shocking taste."—Washington Star.

Man, Woman and Mouse.

A mouse is afraid of a man, a man is afraid of a woman, and a woman is afraid of a mouse—sometimes.—New York Globe.

He Was Well Posted.

Jones— "I understand his wife has money. Bones—He understands it also.—London Answers.

Fall Opening Planned.

The first annual fall opening of the mercantile establishments of this city was announced late last week by business men in charge of the affair. It will be planned along the same line as the spring opening which was so successful here this year. Stores will be open on Wednesday evening, September 26, and special efforts will be made to show to the public the new fall stocks, but nothing will be sold. Prizes are offered for the best window displays and special trains will run from the surrounding towns. The

publicity department of the Commercial club is arranging the affair.

STONE LEAVES DALLAS

Oregon City Man Buys Gallery in South and Resigns Mayoralty

Claude B. Stone, erstwhile Mayor C. B. Stone of Dallas, Polk county, is leaving Oregon. Mr. Stone is a son of Mr. and Mrs. William N. Stone and a brother of W. M. Stone, the attorney, all of Oregon City. The following from the Dallas Itemizer tells the story of Mayor Stone's departure:

"Mayor C. B. Stone on Monday sold his photograph gallery and is negotiating for the purchase of studio at Palo Alto, Cal., and expects to leave the city with his family about September 15. Before his departure he will file his resignation as mayor with the city council and will automatically be succeeded as chief executive by the councilman-at-large, Tracy Staats. This will leave a vacancy in the council to be filled by the members of that body."

"Mr. Stone with his family came to Dallas from Oregon City six years ago and purchased the photographic business of T. J. Cherrington. Since that time he has built up a splendid business."

"About a year ago he was selected by the city council to fill the vacancy as councilman-at-large. In December he became mayor upon the resignation of E. C. Kirkpatrick, who was appointed county judge. In April of this year he was elected mayor for a full term of two years."

"Mr. and Mrs. Stone have made many friends since coming here, who will regret to see them leave, but who will wish them success in their new home."

NAMES FOR COUNCIL

Political Bee Buzzes in Connection With Cox's Seat in Council

The political pot has been boiling here since the resignation on Wednesday evening of City Councilman Roy B. Cox, whose seat as representative from the second ward the council did not fill. Probably the other two councilmen from that ward will have the choice of a successor, but the public generally is taking a keen interest in the matter. Already groups of citizens have suggested such names as those of Dr. C. H. Meisner, C. Schuebel, George Hankins, J. E. Jack, John R. Humphreys and Dr. L. A. Morris. Most of the men have served the city in one way or another. Mr. Schuebel was formerly city attorney and Mr. Jack retired last year as county assessor.

MacCallum Offered Post

During his absence from the city, Rev. J. W. MacCallum, of the Congregational church, has received an offer of a position in an executive capacity with Fisk university at Nashville, Tenn. Mr. MacCallum is traveling now and may include Nashville in his trip before returning home. He has been pastor of the local Congregational church for a year and came here from Portland. He has had no chance to indicate to his friends here whether or not he will consider the Fisk offer.

Girls Have Picnic Feast

A picnic lunch was served Thursday noon on the west bank of the river by the girls and young women employed in the county court house. The party of 12 took basket lunches to the beach opposite the court house and there cooked wienies and hot coffee and had watermelons for a finishing touch. They had music with their meal, too, for one of the young women had provided a phonograph.

Working for Red Cross

The women who are working with the Red Cross society here making articles for the soldiers in Europe Tuesday started to build the second box of goods for shipment. The first box was shipped recently, and as soon as enough has been made the second will go forward. Materials are furnished women who volunteer to work for the Red Cross, and from the present rate of activity the second box will be filled in a very short time.

Aldredge Goes to Study

Eldon Aldredge, an employee of the Crown-Willamette Paper Co., has been ordered to the federal camp at Harvard university, Cambridge, Mass., to take special training in wireless telegraphy. He enlisted in the navy and will go from his station in California to Cambridge at once. Aldredge is the oldest son of Mr. and Mrs. John Aldredge, of this city.

Test Case Settled

Constable D. E. Frost has been restrained, by an order issued in Judge Campbell's court Thursday, from collecting a tax on a dog owned by City Councilman Fred Metzner. The order indicates that the constable will be prevented in any way from interfering with the animals in the county, inasmuch as the councilman's case was to test Mr. Frost's authority.

Editors Go to Newport

C. W. Robey and E. E. Brodie, editors of the Oregon City newspapers, were at Newport over the weekend to attend the convention of the Willamette Valley Editorial association. Both were on the program for the convention. Mr. Robey spoke to the editors on "Estimating Job Printing," while Mr. Brodie, formerly president of the State Editorial association, spoke on "Legal Rates."

Oregon City Courier and The Oregon Farmer, one year for both—\$1.

Mullans Sue Olsons

T. S. and Mary M. Mullan Saturday morning brought suit against Mr. and Mrs. Henry A. Olson to foreclose a contract of sale on lot 6, block 4, Hollywood Park, this county. The charge is that Olson is about 20 months in arrears in his payments upon the property.

WOOD PULP IS TO BE MADE INTO WEARABLES

More wood pulp is to be utilized in the manufacture of "woolens," according to Croonburg, authority among tailors. A mixture of 40 percent of wool pulp to an equal proportion of cotton, and enough wool to make the fabric so woven look like wool—when new—that is the prospect. What sort of wear this hybrid will give and how it will hold dye is a question which was discussed at the Great Lakes Wool convention in Chicago on Tuesday and Wednesday, to which western sheep men were invited as guests of honor.

The use of wood pulp in the manufacture of cloth is the latest experiment undertaken to supply the market with a fabric that will go far toward replacing wool for cloth. The shops have been flooded with shoddy, as goods made from worked over wool fibre is called, until tailors and clothiers have rebelled. This bogus product can deceive the very elect at first blush, but it does not have the warmth nor stand the test of wear, and does not make up like cloth woven from genuine sheep fleece. Yet so great is the scarcity of wool and prices so high, that the plutocratic sheep is one of the few that can afford a full suit. Factories are buying rags by the ton to work over into shoddy for the clothing of humankind.

Woolen goods have been growing lighter in weight, and inferior in quality, while at the same time higher in price than within the memory of the present generation. Tailors, who cater to the most particular trade, find much difficulty in obtaining fine goods to satisfy the taste of fastidious clients. The clothier has many complaints and come-backs on the score of poor quality and fading colors, and consequently the National Association of Retail Clothiers has enlisted its members in the work of the National Sheep and Wool bureau.

Congress has been petitioned to enact laws to compel manufacturers to label woolen goods with a view to exposing shoddy and hybrid mixtures and to tell what wool a garment really contains.

OPERATING A SUBMARINE.

The Method When the Ship is About to Make an Attack.

Every submarine has its commander—generally a captain—who acts as the very brain of the ship. One else can give orders, for so interconnected are all the machines that the conflicting commands from more than one officer would almost surely result in an accident; hence every one reports directly to the captain through the second officer in command, who, by the way, is also responsible for the correct operation of everything from the ballast tanks to the torpedoes.

In making the attack the captain mans the periscope in the main operating room, just beneath the conning tower. The lenses and prisms in the periscope tube transmit the images from the sighting piece above the water down to the periscope eyepiece.

When the vessel dives the decks are first cleared. Then the hatches are sealed down and the oil engines are stopped in quick succession. Storage batteries are turned on to drive the electric propelling motors. Electric machinery must be used under water because the oil engines consume precious air and exhaust poisonous gases.

On the next word from the captain water from outside is allowed to fill the huge ballast tanks in the central hull. Other ballast tanks at the ends of the boat are partially filled to hold the ship on an even keel. This trimming of the submarine, of course, can be delicately controlled by the buoyancy gauges and controls in the operating room.

The weight of all this water causes the submarine to sink, but not completely. The horizontal rudders at the stern of the ship are used to give the final touches to the dive. The commander directs the man at the wheel how far down he wishes to go. By watching the depth gauges in front of him the wheelman can so tip the diving rudders that the proper depth can be found immediately and held exactly.

It takes but a minute or two to dive. In torpedoing a ship the vessel must be turned to aim the torpedo tubes, which lie parallel with the central axis of the submarine—in the bow. The command is given to fire. The gunners in the forward compartment receive the order through speaking tubes or telephones. The torpedo is discharged from its tube by compressed air.—Popular Science Monthly.

Why People Get Fat.

Among curious popular fallacies is the idea that an individual may become obese without eating too much and may remain obese even when very little food is taken. If a person every day eats a butter ball weighing only a third of an ounce in excess of the food actually needed it seems trifling, insignificant, but continued over a year it would involve a gain in weight of nine pounds of fatty tissue or in ten years of ninety pounds. An ounce of bread or half a glass of milk more than the food requirement for the day will bring about the same result. Conversely, if the quantity of food taken be only slightly below the needs of the body some of the body's own fat is used and the body weight falls, a process which may be extended over a long period of time.—Dr. Graham Lusk in World's Work.

Madrid's Throne Room.

The throne room of the royal palace at Madrid is one of the most magnificent in the world. Decorated in red and gold, it contains rock crystal chandeliers, colossal looking glasses of the finest quality, marble tables and priceless porphyry. The ceiling is painted by Tiepolo with the "Majesty of Spain." In illustration of the virtue of the kings and the manliness of the people, who are represented in the different costumes of the provinces. Here the sovereigns of Spain receive on grand occasions when alive and when dead are laid out in state.

The Courier, \$1.00 per year.

RONALD ESSON WRITES FROM EAST TO SANDY

Ronald E. Esson, Sandy druggist and popular Clackamas county citizen, writes the following interesting letter to the Sandy News from the banks of the Hudson river—way back east.

Mr. Esson has advanced rapidly in the corps by virtue of military and medical knowledge gained years ago at the Oregon Agricultural college, where he received his education as a druggist. He was for a time at Seattle and only recently was sent east with the corps as a sergeant, first class. Mr. Esson lectures to his corps on "materia medica" once each day to keep his scientific knowledge refreshed.

His letter reads: Drill goes on like clock-work. Troops are being equipped to last button. What with being in command of company A and giving a lecture on materia medica one hour each day to company B, father hasn't very much time to devote to writing for the Sandy News.

We eat well and sleep well because we are so tired at bedtime we could sleep on top of a barbed wire fence. I have a tent 18x18 with a desk or table. Only myself and my clerk in the tent. Yesterday a battleship came up the North river. It was about 5000 feet long and 800 feet high. Had sub-chasers aboard, two forward and two aft.

It is hot and smoky here. Noise enough to do all of Oregon and have some left for Boring.

One thousand more men came in from Arizona yesterday. A great forest of tents covers this island and the festive sound of hammer and saw blended with the shouting of commands makes sweet music for the Germans interned just across the Hudson on Ellis Island.

Great big liners with wicked black guns looking over the stern slip down the river at all times of the day and night. I am not saying that they are alive with troops, but there is room aboard for such freight if they should desire to go.

The first shot of peri-typhoid vaccine made me sick, but I stayed on duty. Tomorrow I get another shot and five days later the last shot. Probably will get that aboard transport.

Broadway, N. Y., is a dingy, dirty street. About worn out. Looks like front street, Portland, Oregon. The subways run 1000 miles a minute. The trains are hot and filled with black complexioned greasy people that smell of garlic.

Friends, when this kool war is over Sgt. 1st Class Esson will turn Fred and Martha Yohann to collect his benevolent face toward the west \$2000 with interest at 7 per cent from March 3 of last year.

The Courier and the Daily Journal, al \$4.75.

HAVE YOU WEAK LUNGS?

Do colds settle on your chest or in your bronchial tubes? Do coughs hang on, or are you subject to throat troubles?

Such troubles should have immediate treatment with the strengthening powers of Scott's Emulsion to guard against consumption which so easily follows. Scott's Emulsion contains pure cod liver oil which peculiarly strengthens the respiratory tract and improves the quality of the blood; the glycerine in it soothes and heals the tender membranes of the throat. Scott's is prescribed by the best specialists. You can get it at any drug store. Scott & Bowne, Bloomfield, N. J. ©

Decree of Divorce

Howard and Elsie Rose, married at Corvallis on October 22, 1914, were divorced by decree of Judge J. U. Campbell Saturday morning. Mrs. Rose deserted her husband in November, a year after their marriage, his complaint says. Mr. Rose volunteered to contribute to the support of their minor daughter, Olive Rose, who is in the custody of the mother.

Suit for \$491 on Wood

G. A. Powers brought suit in Judge Campbell's court Saturday morning to recover \$491.25, said to be the value of 85 cords of wood which are withheld from his rightful possession by Fred Alt. Powers wants the wood surrendered to him or he wants Alt to pay him its value.

Sentence Suspended

Sentenced to 10 days in the city jail for operating his wood saw without a license, F. M. Blum Tuesday secured an immediate suspension of the sentence upon his promise to secure the license, which will cost him \$25 a year.

Gospel Service at Falls View There will be gospel services at the Pearce residence, Falls View, tomorrow evening, Friday September 14, at 8 o'clock. Rev. John Ovall will preach the sermon.

Scandinavian Service

There will be Scandinavian services in the Methodist church in Oregon City next Sunday, September 16, at 3 o'clock. Rev. John Ovall will preach.

Ladies' Aid "Dorcas" to Meet

The Ladies' Aid society "Dorcas" of the Scandinavian church will meet at the home of Johannes Johnson, Willamette, next Friday afternoon at 2 o'clock.

Suit to Collect \$2000

A. B. Donaldson Monday brought action in the circuit court against Fred and Martha Yohann to collect his benevolent face toward the west \$2000 with interest at 7 per cent from March 3 of last year.

The Courier and the Daily Journal, al \$4.75.

OREGON STATE FAIR SALEM

SEPTEMBER 24-29

Agricultural Exhibits, Grand Live Stock Parade, Harness and Saddle Horses, Running and Trotting Races, Hogs, Cattle and Poultry, Farm Machinery Exhibits, Portland Day, Salem Day, Scandinavian Day, Reformation Day and many other special events. Something of interest every minute.

LOW ROUND TRIP FARES
