

Is your table nice enough for a Thanksgiving dinner?

Dear Amy:-

You and Bob must take Thanksgiving dinner with us. John has just made a good business deal, and bought me a new dining room set. I want "to show it off."

I'm not bashful about confessing this to an old friend like you, Amy. We women all do love pretty homes. If husbands, who can easily afford it, only knew how much happiness they could give their wives by turning them loose in a furniture store, to buy what they wanted, wouldn't the furniture fly, though?

Lovingly,
Lou.

P. S.—John bought my new dining room furniture from

COST OF HIGHWAYS

Figures Show What Nation Has Gained from Road Improvement

There were in the United States last year 2,240,000 miles of public roads only 10 percent of which are classed as "improved roads." Last year the expenditures on account of road construction, including the estimated value of convict labor, made by states, counties, townships and districts aggregated about \$235,000,000. Ten years ago the expenditures on this account amounted to approximately \$79,000,000 and the difference between these two sums shows that there has been a great advance in the demand for improved public highways. But with 90 percent of the roads of the country over which the people travel and do business, unimproved, it is clear that so far the surface has scarcely been scratched.

In the German Empire in Europe, which covers less territory than the single American state of Texas, there are 36,000 miles of state roads and in Prussia alone the annual expenditure on the public roads amounts to \$35,000,000. In England and Wales, less in area than the State of Florida, there are 150,908 miles of public roads of which 27,826 miles are what are called "main roads" and 123,082 miles are included under the designation "other than main roads." Five years ago the local authorities in England and Wales expended on these roads, not including loans amounting to \$7,916,964, \$32,498,000. In Florida, according to the latest available information there are 1,752 miles of what are called "improved roads."

However odious comparisons may be, they are very useful at times to show how far behind the rest of the civilized world the United States are in taking care of the most important economic problem with which they are faced. Oregon farmers are getting less for their wheat and apples than the average price offered growers throughout the United States, but they are being offered more for their oats and barley, according to the federal crop report issued by the Bureau of Crop Estimates on November 1. Oregon potatoes are also quoted below the average price for the country as a whole. With the exception of apples, however, the Oregon yield is far greater this year than last.

The estimated Oregon yield of wheat for this year, according to November 1 figures, is 17,364,000 bushels. Last year Oregon produced 16,604,000 bushels. The price offered farmers in Oregon on November 1 for wheat was 84 cents, while the general average wheat price for the nation was 93.1 cents. Last year at this time Oregon wheat was quoted at 95 cents.

Uncle Sam figures that according to November indications, Oregon will furnish 15,456,000 bushels of oats this year. Last year the state's oat yield was but 12,740,000 bushels. Oregon producers were offered 36 cents a bushel for their oats on November 1, while the prevailing price in the United States on that date was 34.9 cents. Last year Oregon oats were quoted at 40 cents.

Barley in Oregon will amount to 4,788,000 bushels this year, if the federal forecast is to be believed. Last year Oregon barley yield totaled 3,660,000 bushels. Oregon barley on November 1 was worth 52 cents a bushel, while the prevailing national price was 50.1 cents. Last year at this time barley was bringing 56 cents in Oregon.

This year the state will produce 6,120,000 bushels of potatoes as against 4,758,000 bushels last year. November 1 quotations on potatoes in Oregon were 52 cents. Last year they brought 64 cents, which was lit-

OUR NATIVE THRUSHES.

We Have Eleven Species and All Are Friends of the Farmer.
[Prepared by United States department of agriculture.]

Altogether there are within the limits of the United States eleven species of thrushes, five of which are commonly known as robins and bluebirds. The other six include the Townsend solitaire, the wood, the veery, the gray cheek, the olive back and the hermit thrush.

The robins and bluebirds nest close to houses, and even the shyest of the other species are content with the seclusion of an acre or two of woodland or swamp. For this reason the thrushes are among the best known and most carefully protected of native American birds, and at times their numbers become so great that it is feared they will do much harm to crops and fruit. The investigations of the department of agriculture, however, show that there is very little ground for this fear. On the other hand, they destroy such a vast number of insects each year that it is probable that without them many crops would suffer serious damage.

Of all the thrushes the robin is probably the best known. It has been frequently accused of destroying fruits and berries, but it has now been ascertained that this only occurs in regions that are so thickly settled that there is no wild fruit upon which the robin may subsist. In some years the bird is a great pest in the olive orchards of California, but it is probable that they are driven to the orchards because of the scarcity of native berries at these times. Where a wild fruit is available the birds seem to prefer it to the cultivated varieties.

Like the robin, the bluebird is very domestic; but, unlike the robin, it does not prey upon any cultivated product or work any injury whatever to the fruit grower. During the fruit season, in fact, five-sixths of its food consists of insects. It seems, therefore, that the common practice of encouraging the bluebird to nest near houses by placing convenient boxes in which it may build its home is thoroughly justified.

The six other species of the thrush group also feed principally on insects and fruit, but a great portion of the fruit which they consume is wild berries. Domestic fruits are eaten so sparingly by these species that the damage done is quite negligible.

The bird known as the Townsend solitaire is noted chiefly for its song, which is said to be at times the finest of any of the thrush family. This thrush, however, confines itself almost entirely to the mountains and gorges of the far west. The wood thrush, on the other hand, is distributed over the eastern part of the United States and is a frequenter of open groves and bushy pastures. This thrush also is noted for its sweet song, especially in the early evening. It does not nest in gardens or orchards, however, and is seldom seen about farm buildings, so that many people who are familiar with its song would not know the bird by sight. The wood thrush consumes a number of very harmful insects such as the Colorado potato beetle and white grubs. The fruit which it eats it usually picks up from the ground instead of taking fresh from the trees. There is therefore no reason why the wood thrush should not be rigidly protected.

The other varieties also seem to eat little that is of value to farmers, while, on the other hand, they destroy multitudes of harmful insects each year.

Military Pensions in Service.

Servian soldiers enjoy a pension, granted only to invalid cases. The ordinary veteran who does not suffer from any injury which would render him invalid does not receive a pension, military service in Serbia being compulsory. Invalid pensions in Serbia are paid by the year—that is, each applicant who is granted a pension receives a certain sum each year. In case the soldier receives injuries which would render him partially invalid he receives only part of the yearly amount, most likely one-half, but in case of the soldier being totally invalid he gets the full amount.

One on the Stenographer.

The other day a stenographer in a downtown office in Boston begged some workmen who were putting up a new telephone not to place it so high on the wall as they were doing. "You see," she said, "I have to use it as much as any one, and I am so short that I can hardly reach it."

"Oh, well, miss," said the humorist in charge of the work, "you can raise your voice, can't you?"—Boston Transcript.

BREATHING IN THE WATER.

In Doing It Properly Lies the Secret of Success in Swimming.

The way to avoid drowning, according to a swimming teacher, is to learn how to swim. Good swimmers don't drown. They might die of chill or starve to death, but as for drowning—pooh!

"How about cramps?" he was asked. "Even good swimmers have cramps." "Cramps needn't cause a moment's worry. I've seen thousands of good swimmers seized with cramps, and never a one was drowned. All they did was to turn over on their backs and either wait for help or paddle with their free limbs. I've never heard of a swimmer having cramps in both legs and arms. Even then his case would not be hopeless."

"There never was a case of drowning that was caused by cramps. That may seem surprising after the countless water tragedies that have been blamed on cramps. Death in the water is caused by chill or strangling."

"People strangle—to death because they are ignorant of the proper method of breathing. When they sink beneath the water they hold their air passages shut. When they come to the top they have to breathe out the air they've used while under water. As breathing out takes fifty times as long as breathing in, they have no time to get a fresh supply of air before they go under again. This keeps up until they breathe in under the water and thus strangle to death."

"The process should be reversed. Breathe in for the second you are above water; then breathe out through the nostrils while under the water, and you can keep it up until you starve to death."

"Nine-tenths of swimming is breathing, and movement is only one-tenth," says the expert.—Kansas City Star.

WHEN THE BLOOD IS PURE.

Then Disease Germs Are Rarely Able to Infect Our Tissues.

The popular notion that the prompt healing of a cut or other wound is an evidence of purity of blood has a sound scientific basis. When the skin is broken germs in large or small numbers are thereby admitted to the sacred precincts of the tissues from which they are ordinarily excluded by the dense structure of the skin. When the tissues are maintained in a healthy state by pure and vigorous blood the few germs which enter are quickly destroyed, so that the formation of pus, or so called suppuration, does not occur, but when the blood is not pure, so that the serum and the cells are not able to make the necessary active defense, the germs grow and develop, suppuration occurs and the wound, if large, may require a long time to heal.

We might represent this by picturing in our mind a glass globe filled with water and fishes and other small creatures swimming about in it. Now imagine that indigo, ink or coloring matter of some other sort is dropped into the water. It will immediately become tinged, and if the coloring matter is of a poisonous character the fishes will soon show uneasiness and unless relieved by a replacement of the impure water by a fresh supply will soon die. This is just the condition of the living cells of the body when bathed in impure blood. The stomach cells which secrete the gastric juice, the muscle cells which contract, the liver cells which make bile, the brain cells which think—every one is definitely and seriously injured by the impurities brought in contact with it. Impure blood, then, must be regarded as the foundation of a large portion of all the diseases from which human beings suffer.—J. H. Kellogg, M. D., in Good Health.

Sending a Man to Coventry.

The expression "sending to Coventry" had a military origin. It arose, so it is said, in the days of Charles I. when the inhabitants of Coventry strongly objected to any intercourse with the military quartered in their town, and a woman known to speak to a man in a secret cloak was at once the subject of a scandal. So rigid were the natives that the soldier was confined to the mess room for conversation. Thus the term "sending a man to Coventry" if you wished to shut him from society took root in the English language.—London Chronicle.

Progress in Lunacy.

A few months ago, at a council meeting in a certain small town, a well known alderman astonished the members by saying:

"Gentlemen, we have been sending our lunatics to— asylum for a long time now, and it has cost us a great deal of money, but I am glad to be able to tell you that we have now built an asylum for ourselves."—Chicago News.

Some Hope of Finish.

"Which do you prefer, a preacher who preaches extemporaneous sermons or a preacher who reads his sermons?" asked Smith.

"I prefer the preacher who reads his sermons," replied Brown. "He can tell when he gets to the end of his sermon."—Spokane Review.

A Fatal Omission.

"This," said the editor, "describes the invention in graphic style, but you haven't made it complete."

"No," said the reporter.

"No. You haven't said that it is destined to revolutionize the industry."—Boston Journal.

"BUY IT IN OREGON CITY"

HILL FIGHTS PLAN

County Seat Factions Have Clash Before Council Over Elevator

They had some more "harmony" at the council meeting in the county seat Monday night, when E. G. Caulfield suggested that as the city was greatly in debt it might be well for the city dads to put the question of making the elevator self-supporting upon the ballot at the municipal elections. Mr. Caulfield said that he thought many people would not mind paying a cent a ride, and that inasmuch as the city was heavily mortgaged at present it ought to be put up to the voters. V. Harris, another taxpayer, shared Mr. Caulfield's views.

Councilman Cox got up quietly and remarked that there was a dividing line in the county seat between the people who lived on Main street and those who lived on the bluff, and that business men in the upper portion of the city were indignant that so much was being done for those on Main street. He believed that situation ought to be considered when discussing the matter of charging for rides on the elevator.

It is believed that Mr. Cox was gently intimating that some of the hill merchants think a free elevator will make it too easy for shoppers to get downtown.

Councilman Albright referred to the figures on the elevator bond election, when 687 people voted for the elevator against the 443 who voted against it. Mr. Albright also referred to the clause in the elevator amendment which says: "The said elevator shall be located at some convenient and reasonable place to be selected by the city council of Oregon City, Oregon, and the expense of maintaining and operating the same shall be paid out of the general fund of Oregon City."

Mr. Harris wanted to know where all the money expended in getting the elevator ready had come from; and Mr. Caulfield made an unprejudiced plea for the submission of the matter of charges to the people, saying that the city's financial condition warranted it.

The council took no action. However, to add to the general feeling of war that developed, the Honorable Christian Schuebel bobbed up and cleared his system of the following gems:

"Personally I was one of those who voted against the elevator. And I may add that the city will need more revenue than it has in sight if it is not to go behind even more than it is. According to my estimate we will go behind \$6,000 this coming year unless the voters pass the amendment for the \$275,000 bond issue."

Mr. Schuebel then delivered an election speech in behalf of the proposed bond issue, and wound up with this climax:

"The time has come when we men have got to lay aside our petty jealousies and all pull together. As it is now we have men here who would rather knock than work for the best interests of the city."

After Chris had subsided the council went ahead and ordered indemnity insurance for the elevator in the sum of \$10,000; and also asked the Labor Commissioner's office to test it.

WET, BUT TRUE

Prohibition Law direct Slap at Home Trade, as Writer Says

Editor, Courier:—In one of the late issues of your paper you had a sound and strong editorial in which you quoted "in the long run the country that is good enough to live in, is good enough to trade in." I absolutely agree with you in the above statement and in the matter set forth in your editorial, that mail order business has been the ruin of more than one community, and it is wrong to buy mail order things in one particular, when the same things can be bought at the same price in your own community. It is equally as wrong to buy other mail order things when the same things can be bought in your own community for a good deal less.

The point I am getting at is this. The last legislature passed a law prohibiting the manufacture of beer in Oregon, at the same time permitting certain amounts to reach every family. By requiring the said family to send their money outside of the state, and then charge extra express charges; thereby putting out of business Oregon breweries with their immense investments; cutting off a large payroll, and requiring the citizens of this state to send their money to a foreign state for an article which they could so much more easily and cheaply obtain here, if the breweries would be permitted to manufacture and dispose of only the amount allowed to the individuals under the law. Does this seem to be fair reason to the Courier and if so, what stand has the Courier taken in this matter? The Courier has always been impartial in its editorials as far as I know, and I will be grateful to see it take a stand on this question.

HARRY FRANCES.

CURED BOY OF CROUP

Nothing frightens a mother than the loud, hoarse cough of croup. The labored breathing, strangling, choking and gasping for breath call for instant action. Mrs. T. Neurener, Eau Claire, Wis., says: "Foley's Honey and Tar cured my boy of a serious attack of croup after other remedies had failed. I recommend it to every one as we know from our own experience that it is a wonderful remedy for coughs, colds, croup and whooping cough." It clears air passages, soothes and heals.—Jones Drug Co.

IF YOU DIE THEY'RE BAD

Annual Questioning about Mushrooms and Toadstools Hits University

Small boxes with queer-looking contents are beginning to come to Albert Raddin Sweetser, professor of botany in the University of Oregon. The boxes contain fungi, and Mr. Sweetser is asked in each case to tell the sender whether the fungi are toadstools or mushrooms. For the mushroom season has just begun again.

This service is gladly performed without charge, but Mr. Sweetser requests that all the root of each fungus be included, and that each specimen be wrapped in tissue paper and packed so that it cannot be broken in

transit. Specimens should be sent promptly after being picked.

"While many of the toadstools are good to eat, some make trouble in the digestive tract, some are dangerous, and some are actually deadly," said Mr. Sweetser. "Safety lies only in knowing a few unmistakable forms and sticking closely to them. In some cases the most attractive and innocent looking of the toadstools are the most deadly. One safety-first motto in gathering toadstools is to avoid absolutely all forms having acup, or anything resembling a cup, on the lower end of the stem. All the deadly forms possess some sort of a cup, a ring, white gills, and scales, also the scales and ring in some species disappear early.

"This does not mean, however, that no species without these characteristics is deadly. We are glad therefore to make identifications for anyone in the state."

Went to the Hospital

C. E. Blanchard, postmaster at Blanchard, Cal., writes: "I had kidney trouble so bad I had to go to the hospital. Foley Kidney Pills were recommended to me. I cannot speak too highly of them." Sufferers in every state have had similar benefit from this standard remedy for kidney and bladder ailments. It banishes backache, stiff joints, swollen muscles and all the various symptoms of weakened or diseased kidneys.—Jones Drug Co.

A MOTHER'S HOPES AND ANXIETIES

Until the first grade card is brought from school, each mother's heart will be filled with hopes and fears of the expected school advancement of her children.

Have you left undone any duty that might change these hopes to certainties? What about good VISION—most necessary of all the child's equipment? Defective eye-sight is too great a handicap for any child to carry thru school; yet ONE in every FOUR suffer from it. Make sure; neglect may mean much.
