

PROCLAMATION

Designates Saturday, May 12, as Agricultural Defense Day

Whereas, in this present war time crisis, the vital importance of increased agricultural production is becoming more and more important, and

Whereas, Oregon has already under way a state-wide movement for the organized encouragement and enlargement of our agricultural production, and the efficient mobilization of farm labor, and

Whereas, it is especially desired by those who are chiefly conducting this admirable work that special attention and interest be focused on the campaign for greater and better crops by the designation of a special day in which its problems and opportunities shall be considered,

Now, Therefore, I, James Withycombe, Governor of the State of Oregon, do hereby proclaim Saturday, May 12, 1917, as Agricultural Defense Day, and I ask that so far as possible the organizations and individuals cooperating in our agricultural preparedness campaign shall devote that day to devising ways and means for the most efficient administration of the important work which lies before them.

And it is further suggested that on this day the citizens of all our communities make a special effort to render direct assistance to the farmers in their localities to the end that the maximum acreage may be planted and cared for.

In Testimony Whereof, I have hereto set my hand and caused the Seal of the State of Oregon to be hereunto affixed this fifth day of May, 1917.

JAMES WITHYCOMBE,
Governor.

NO SHEEP IN MARKET

Liberal Hog Supply. California Steers Are of Poor Quality

Receipts of cattle Monday were about 1000 head, including some 400 head of California steers. They were not of very good quality, although they were heavy and were well wintered. The string was weighed at \$10.25 straight. About 300 head were on today's market that are better cattle by 50 per cent. There was a good demand and beef steers were sold mostly on a steady basis, while cows all brought 25 cents higher prices. One load of light steers brought \$11.25 with another load at \$11. Prime heavy steers sold from \$10.75 to \$11. Medium steers brought from \$9.90 to \$10.25, while ordinary dairy bred steers ranged from \$8 to \$9.25. There were no prime cows in the receipts, good kinds bringing from \$9.25 to \$9.50 with medium grades from \$8 to \$8.75. Ordinary stuff sold from \$7 to \$7.50, while thin dairy cows brought from \$5 to \$6.50. Bulls were in good demand, selling from \$5 to \$8.25. Best light veal calves continued to bring \$10.

A liberal supply of hogs was here yesterday. Demand from killers was rather slack, although there was a good speculation demand which strengthened the market. Prices were on a steady basis in all lines except pigs, which were 25 cents lower. Heavy pigs sold from \$15.65 to \$15.85, while lights brought \$15.50 to \$14.25. Pigs sold from \$13.75 to \$14.25.

There were no sheep on the market and prices are all unchanged.

Hard Work for Women

It is a question if women doing men's work deserve particular sympathy, for it is doubtful if there is any work that is harder than everyday housework. Overwork tells on the kidneys, and when the kidneys are affected one looks and feels older than the actual years. Mrs. A. G. Wells, R. R. 5, Rocky Mount, N. C., writes: "I cannot praise Foley Kidney Pills enough for the wonderful benefit I have derived from their use for a short while."—Jones Drug Co.

When the War is Going to End

A jingle that is going around in London:
"Absolute confidence have I none,
But my aunt's charwoman's sisters'
son
Heard a policeman on his beat
Say to a housemaid in Downing
street
That he had a brother who had a
friend
Who knew when the war was going
to end."—Chicago Tribune.

IS SINGING A LOST ART?

For the People at Large It Certainly Is, Says This Critic.

Singing, as far as most people are concerned, is a lost art. Thousands attend operas, recitals and musical comedies; tens of thousands wind up phonographs. But, as for singing themselves informally at their work or play, they have forgotten how. In times past people of all ranks sang together as a matter of course. Sailors sang at their work; peasants, shepherds, cowboys, had their favorite and appropriate songs. The songs of children at games, the lullabies of mothers, are in the collected ballads and folklore of many peoples.

"The pastimes and labors of the husbandman and the shepherd," says Andrew Lang, "were long ago a kind of natural opera. Each task had its own song: plowing, seeding, harvest, burial, all had their appropriate ballads or dirges. The whole soul of the peasant class breathes in its burdens as the great sea roars in the shell cast up on the shore."

Nowadays the whirl of machinery makes all the noise. The workers in mills might find it unsatisfying to sing at their work, but it is doubtful if they would sing even if their voices could be heard, while singing in an office or store would pretty surely be stopped by the "boss" or the police. Thousands congregate every night in the silence of moving picture theaters, and even in the churches where singing by the attendants now usually listen in silence to a paid singer.

Singing in this age is largely confined to the professional performer, drunken men and phonographs.—Indianapolis News.

BAD HABITS OF POSTURE.

They Lead to Deformity and Chronic Disease if Not Corrected.

The significance of the postures habitually assumed by individuals is the subject of serious consideration by physicians at present. Exhaustive investigations seem to indicate pretty conclusively that bad postures, such as stooping shoulders, contracted chests or protruded abdomens, are not merely the result of careless habits in the individual, but are due to some slight physical deformity which should be corrected. Generally speaking, persons who have bad posture habits are not very robust.

Every one has observed that persons who are fatigued drop into bad postures temporarily, and there are many examples of unusually robust persons with whom bad posture is chronic. Nevertheless, tendency to bad posture undoubtedly adds to the trend toward weakness and chronic disease, particularly in individuals who are not naturally rugged.

The robust child or the adult who takes an adequate amount of recreation from work does not usually fall into bad habits in sitting or standing; in fact, he is able to combat the condition of study and work which make for bad posture. The less robust child and the overworked or too sedentary adult, on the other hand, are obliged to make persistent efforts to avoid bad posture habits. And, although these habits may have no very detrimental effect upon the general health during childhood, they are likely to result in chronic diseases later in life as a result of the anatomical deformities produced.—Exchange.

Platinum in Coins.

The only instance in which platinum has been used for coins was by the Russian government between the years 1828 and 1845, when they made pieces of 3, 6 and 12 rubles. Coins and medals have been struck in this metal by other governments simply for commemorative or experimental purposes, but never for circulation, like the case of the Russian government. Up to within fairly recent years counterfeiters of gold coins have been made of platinum and then gilded. That was only when the price of platinum was about half that of gold.

Nervous Systems.

In man and all of the higher animals the nervous system centers in the brain, and life is dependent upon the condition of the brain, so that the slightest injury to it means death or derangement of faculties. But in the case of the worm and other creatures of the lower kind the nervous tissues are distributed over the body and do not center in the head, so that a worm may be cut in half and still live.

Speak to the Horse.

The human voice has more or less marked influence on all animals. In managing horses especially the voice is of the greatest use. It should be quiet and, though confident and masterful, not loud and boisterous. No one should ever touch a horse without at the same time speaking to it.

Love and Strife.

Of a truth love and strife were foretime and shall be, nor ever, methinks, will boundless time be emptied of that pair. And they prevail in turn as the circle comes round and pass away before one another and increase at their appointed time.—Empedocles.

His Little Task.

"Very suspicious man, they say."
"Very. Bought a dictionary last week, and now he's counting the words to see if it contains as many as the publishers claim."

John Adams.

John Adams, who died in his ninety-first year, was the oldest of our presidents.

THE FLY MENACE

A Remedy Suggested for a Dangerous Evil by Dr. Welsh

The following is submitted by Dr. Orel A. Welsh, city health officer, at the request of the Oregon City Woman's club committee, of which Mrs. S. P. Davis is chairman:
The typhoid or common house fly is a very dangerous pest and is recognized as a carrier of typhoid, tuberculosis and other dangerous diseases.

A little effort on the part of all in the spring and summer months would eventually eliminate the fly entirely. It is estimated by reliable parties that a female fly breeding in April may produce a progeny of 5,598,720, 000,000 flies by September.

From these figures it will easily be seen that it is much easier to kill the one fly in April than to wait and begin the crusade against the fly when they are swarming thick at the kitchen door trying to gain entrance to get something to eat and incidentally leave myriads of disease germs on all the food with which they come in contact.

The breeding place of the fly is every place where there is filth, such as the garbage can, horse manure, stables and other refuse. The fly is attracted to those places and crawls an inch or so under the surface and lays its many eggs. The eggs hatch into maggots in one day and in a short time the adult fly appears.

It is almost a hopeless task to try and rid the community of flies after they have gotten a good start, so the U. S. department of agriculture has been carrying on investigations to find out what is the most efficient method of preventing this common enemy from propagating.

They have reported that borax is by far the most effective, economical and practical substance that they had experimented with. The borax is harmless and while it does not kill the flies, it does prevent the eggs from hatching if properly applied.

The directions are as follows: Apply through a fine sieve or flour sifter 2 ounces of borax to the can of garbage daily. Apply in the same way 10 ounces of borax to 8 bushels of fresh manure, and sprinkle with water. This will prevent the eggs from hatching.

Borax should also be applied to floors and crevices in barns, markets, etc., as well as to street sweepings. Water should be added after applying the borax.

SCHOOL PATRONS MEET

Mrs. Nission Calls Parents' Attention to Over-Entertainment

The Molalla Parent-Teacher association was instructed at a meeting on Saturday by the interesting talk of Mrs. June Nission, Multnomah county juvenile court officer. Mrs. Nission brought a large audience of women to attention when she charged that parents entertained their children too much. She said that this was the cause, directly and indirectly, of much of the waywardness that the juvenile courts of the land have to attempt to correct.

A picture study discussion was led by Loreda Burkholder and Gladys Dunton, and Lena Ulen spoke on technical grammar. F. J. Toose, Oregon City school superintendent, discussed the coming convention of the National Education association, and H. G. Starkweather made the meeting an occasion for a talk on the proposed bond issue. Others who spoke briefly were County Superintendent J. E. Calavan and C. F. Romig, superintendent of the Willamette schools.

Profit in Veal

It has been suggested by the agricultural college that no action be taken in the proposed boycott of veal to assist in overcoming the beef shortage, without first considering every phase of the situation. Beef bred calves are seldom slaughtered for veal except when there is a slump in the beef market or when feed is scarce and high. In 1910 over 6,000 calves were shipped from the ranges to the Portland Union stock yards, while since 1910, under improved beef conditions, there is little tendency on the part of the beef men to veal their calves. During the year just past only 227 calves were received from the country east of the mountains and these were largely from the dairy farms. The supply of veal in Portland is being derived at this time almost entirely from the dairy farms of Oregon and Washington. These calves, therefore, are of dairy breeding and unsuitable for growing into mature beef. If a veal calf weighing 200 pounds is converted into a 1000-pound steer, it is ordinarily assumed that there is an actual profit of 800 pounds of beef, but this does not necessarily follow, owing to the fact that the feed required to grow the steer may have a greater money value than the beef, and also the same feed might be worth more in the food production campaign if used in some other way.

The average dairy bred steer not only does not pay for the feed it takes to make him into mature beef but may fail to pay for the feed necessary to market him into veal, especially as veal must be fattened almost entirely on whole milk. As a result we find some of our most progressive dairymen slaughtering their surplus male calves at birth since their cost accounts have shown that the milk necessary to fatten the calf was worth more than the veal produced.—E. L. Potter, Professor of Animal Husbandry, O. A. C.

Mrs. Castner is Here

Mrs. Charles H. Castner, president of the Oregon Federation of Women's clubs, is in Oregon City today to address the local club. Mrs. J. W. Norris, chairman of the civic improvement committee of the club, is hostess for the meeting, and Mrs. C. G. Miller has charge of the musical program. Mrs. Castner comes to Oregon City from her home at Hood River.

ALL STATE ORGANIZED

Campaign for Food Preparedness Will be Presented With Vigor

All Oregon is now organized for vigorous prosecution of the United States and Oregon cooperative food preparedness campaign. When the emergency call came the nucleus of effective organization already existed in the county agricultural agent policy and the club work of the girls and boys as conducted by the extension service of the Agricultural colleges. Fifteen counties were maintaining county agents, and the county-agent plan has been extended as districts until almost the entire state is included. This county is organized in the Washington-Clackamas group, with headquarters at the cities of Hillsboro and Oregon City.

The district leader for this territory is E. B. Pitts, extension specialist in dairying and animal husbandry. For more than three years Prof. Pitts has studied the dairy and farm animal problems of the state, organized various dairy associations, assisted in the organization of the Oregon dairy exchange, issued bulletins on the feeding and management of the dairy herd, and has taken a leading part in the recent revival of Oregon dairy interests. He has served in various agricultural capacities in this and other states, working to increase and conserve the agricultural output. He will be assisted by T. D. Case, a senior in agriculture at the Agricultural college, who has been granted leave for the remainder of the semester to take up special duties in connection with the emergency measures for increasing the food supply.

All of these counties, together with the other district and county-agent counties, are now integral parts of the state-wide, nation-wide organization to increase the food supply requisite to a successful campaign by the navy and army. Food, and still more food, is the plea of President Wilson, transmitted to the people of Oregon through Secretary Houston, President Kerr and Director Hetzel. This mighty mobilization for supreme effort is the answer that Oregon makes, with its magnificent resources and intrepid spirit.

The club work, carried cooperatively by the government, the state college and the state department of education, is the basis of organization for the work of the boys and girls. This work is directed by H. G. Seymour, state club leader, and several assistants in charge of special phases of the work or acting as local leaders in different parts of the state. In the present emergency it was found necessary to extend the local leader plan to include every county of the state, which is now under organization into districts of one or more counties each, with a local leader in charge. One of the first districts thus organized is comprised of three leading southern Oregon counties, with J. Percy Wells of Jackson county in charge of the city garden, canning and food economy activities. This work aims first of all to enlist and direct the work of all the children of the towns in growing vegetables of high food value and good canning and drying qualities, and later instruct girls in canning the surplus for future use. The club organizations are being rapidly formed and when complete will be reported to the press.

THRIFT IS MISGUIDED

Straus Suggests Constructive, Not Destructive Thrift Practice

"One of the greatest dangers that confront us at this moment is misguided thrift," declares a statement issued by S. W. Straus, president of the American Society for Thrift.

"In our efforts to be patriotically economical, we find ourselves going to extremes in the opposite direction, which is just as great a menace as wastefulness and extravagance," said he. "One of the worst calamities that could befall our nation at any time would be to stop the wheels of industry, but more especially now."

"The point is to differentiate between destructive and constructive thrift. In times of peace or war, waste is reprehensible, but indiscriminate tight-fistedness is worse, because in such conditions the provident are made to suffer with the improvident."

"Because the whole nation suddenly has become conscious of the necessity of thrift, we as individuals should take care not to deflect from their normal courses the tides of the nation's money that turn the wheels of industry. America as a nation is not in any danger of running short of money, but we are threatened with a food shortage because on us rests the duty and responsibility of feeding our allies."

"Everyone can distinguish the difference between prudent living and wastefulness. If a man buys a suit of clothes, a pair of shoes or a hat, his money goes into legitimate circulation and furnishes uses for capital and employment for labor."

"The American people have responded in a grand way to the needs of the hour. We are going to conserve our resources and increase our food supply in a way that will astonish the world, but in doing this we stand face to face with economic hardships unless each individual is governed by common sense, prudence and foresight."

"In brief, administer your expenditures in a clean, honest, legitimate and patriotic manner. Eliminate waste of food, bearing in mind that every mouthful you save may be the sustenance of some starving fellow-human being abroad. We should not turn down on one hand while we are trying to build up on the other. Those in business should not hesitate—be courageous and keep on going. America has everything to make herself prosperous. The billions of dollars which are being raised for war purposes will eventually return into the pockets of the people. Even the money which we loan to our allies is being spent immediately in America."

The national bond issue means that for some years to come this country will be paying back the obligations incurred today. America is still in the midst of the greatest era of material prosperity the country has ever known.

"In the matter of individual expenditures every man should be guided by his own necessities and the needs of his country. Let none of us be a slacker in the business world. This is no day for the coward or weakling. Be brave and confident. Remember the most acute need of our nation today is intelligent, productive, constructive thrift."

ASK FOR \$60,000

Oregon City Active in Work of Raising Army Y. M. C. A. Money

Oregon and Idaho are asked to contribute \$60,000 of the \$3,000,000 that is to be given by the people of the nation for the work of the army Y. M. C. A.

If possible the entire amount will be raised within two weeks. In view of the wonderful response in Oregon and Idaho to the call for military en-

listments, effort will be made to establish another record of success for the great Y. M. C. A. enterprises.

So impressed are Governor Withycombe of Oregon and Governor Alexander of Idaho with the merit of the movement that they are heading the campaign and it was by their proclamation that May 6 was designated as "Army Y. M. C. A. Day,"—a day set apart for the telling of what the Young Men's Christian association has achieved in service since war broke out in Europe and what it now proposes for the welfare of the boys under the Stars and Stripes.

With the money secured from the campaign throughout the country 200 Y. M. C. A. buildings, costing \$4,000 each and measuring each 40 by 120 feet, will be constructed and maintained with secretaries in attendance. "A building for each brigade" is the slogan. Each building will be equipped for the letter writing of the soldiers, with reading tables, magazines, papers, phonograph, moving pictures, checkers, chess, dominoes and billiards. Stationery is furnished free and the present record for army Y. M. C. A. buildings is 1000 to 3000 letters a day to "keep the home ties from breaking." In a social way games, entertainments and musical programs are arranged. Physical activities include baseball, basket ball, field meets, tugs-of-war, wrestling, boxing and volley ball. There are gospel meetings, evangelistic addresses, song services, Bible classes, and, what is probably the most important part of the work, personal talks with men.

Trouble Entirely Disappeared

Fathers and mothers worry over a child with a chronic cough. Knudt Lee, Wannaska, Minn., writes: "For several years my daughter had a bad chronic cough. Every time she caught a little cold, it aggravated the trouble. We tried many medicines, but not until we tried Foley's Honey and Tar did anything produce any great relief. In a few days the trouble entirely disappeared and has never returned." Foley's Honey and Tar for coughs, colds, croup, whooping cough.—Jones Drug Co.

DATE _____ NUMBER _____

TO ALL DEALERS:

For your information we wish to advise that in our experiments and tests here at the factory with our new Eight Cylinder car, we have been able to secure uniformly better results with Standard Oil Company's Zerolene motor lubricant than with any other which we have used.

Please understand, however, that we do not wish this to be construed as an attempt on our part to dictate the brand of oil which you should use, but merely to call your attention to the fact that this particular brand has given us better results than any others which we have tried, and are giving you this for your information.

Yours very truly,
THE PEERLESS MOTOR CAR COMPANY

ZEROLENE
the Standard Oil for Motor Cars

ENDORSED BY PEERLESS MOTOR COMPANY—because their technical department was "able to secure uniformly better results with Standard Oil Company's Zerolene motor lubricant than with any other."

That's because Zerolene is correctly refined from asphalt-base crude by methods especially developed by the Standard Oil Company.

Less wear and more power because Zerolene keeps its lubricating body at cylinder heat. Less carbon because it burns clean and goes out on exhaust.

Zerolene is the oil for your car.

For sale by dealers everywhere and at our Service Stations
