

LEAPS IN THE DARK.

Why the Broncho Jumped in His Wild Race at Midnight.

A former herdsman relates a thrilling personal experience connected with a stampede of cattle. He was taking a herd of 400 steers to Leadville and had camped for the night on Bear river, near its junction with the Little Snake. At midnight, when he went on guard, all was quiet, but in an hour or so, for some unexplained reason, the cattle were up and off like a flash, some thing had stampeded them.

He was riding an old time colored blue backed California broncho, just the best for the work. He had often ridden him a hundred miles a day. The night was dark and cloudy, and he had to rely on the animal's sure footedness as he strove to stay on the flanks of the steers and turn them until their score should cease.

It was a wild race. Four or five times the broncho gave tremendous jumps, but landed right and went on in good shape. In the course of an hour or so the man had the horses quieted.

When daylight came, being curious to learn what obstacles had occasioned those tremendous jumps of the broncho, the man set forth to look over the ground. Leaving the bottom land, the steers had ascended a gentle incline, and on the plateau at the top he had kept circling them.

The plateau was intersected by a canyon about four miles long and from 1,500 to 2,000 feet deep. Its walls in places toward each other at the top, and the distance across was fifteen or twenty feet.

During the chase the broncho had jumped that frightful canyon four times. His hoof marks were plainly visible, and down in the debris, hundreds of feet below, were a dozen mangled steers that had been crowded off.—Los Angeles Times.

WHALING DAYS ARE OVER.

A Once Thriving Industry That Has Nearly Vanished.

At the outbreak of the American Revolution and for a period of seventy-five years following the conclusion of that struggle whaling was the most important branch of the American fisheries. From 500 to 700 vessels sought whales in all the oceans and seas of the world, and in one year New Bedford alone sent out 200 vessels, whose cargoes of bone and oil were the basis of the industry of the city.

The pursuit of sperm whales reached its climax in 1857, when oil valued at nearly \$4,500,000 was brought in, mostly from the south Pacific. The height of the industry was in 1840, when 70,000 persons derived their support from whales and 720 vessels, valued at \$21,000,000, were engaged.

For more than fifty years the fishery has been declining, and in numerous ports that once derived most of their wealth from the industry there have for a long time existed only memories of former greatness. For a number of years the sperm, right and bow head whales that supported the fishery in early years have been very scarce and their pursuit has been unprofitable, and the present importance of the whale fishery, amounting in value to less than 2 per cent of the American fisheries, depends on the taking from shore stations of species of whales that formerly were for the most part neglected.

The glory of the whale fishery has departed forever, and the commercial if not the biological extinction of all kinds of whales is proceeding rapidly, underlined and unhampered by the principal maritime powers.—Hugh M. Smith in National Geographic Magazine.

Braided Rivers.

A river not confined to a single channel, but broken up into a number of channels, which in turn branch and unite in a complex and confusing manner, is called a braided stream. It is caused by the slight fall of the stream, which prevents it from carrying away all the sediment swept into it by its numerous tributaries.

This material chokes the stream and forces it to spread into many shallow and shifting channels, resembling the strands of a braid. A good example of this is Jefferson river, in Montana.—New York Mail.

When the World Is Full.

The mean decimal rate of increase in the population of the world is 8 per cent, and at this rate the 28,000,000 square miles comprising the fertile regions of the earth, which Ravenstein computed can only support 207 persons per square mile, will have their maximum population of 5,394,000,000 persons in the year 2072. This estimate allows fourteen persons per square mile in the 18,000,000 square miles of steppes and deserts.

LLOYD-GEORGE IN CAPTURED GERMAN DUG-OUT

In his recent visit to the fighting front in France David Lloyd George, British minister of war, was accompanied by M. Thomas, French minister of munitions, and Baron Reading, lord chief justice of England. In the

picture Lloyd George is seen in the background and M. Thomas, the black bearded man, at the left. Lloyd George recently made a statement to the effect that there is no end of the

war in sight and that any step for peace at this time by the United States, the Vatican or any other neutral would be considered by England an unneutral, pro-German move and resented.

BAPTISTS COMPLETE BIG ENDOWMENT FOR COLLEGE

BYRAISING 1200,000 M'INNIVILLE WILL RECEIVE \$50,000 FROM J. J. HILL ESTATE.

The McMinnville college endowment fund has been completed and that the gift of the late James J. Hill of \$50,000, and other large donations are thereby assured.

Aside from the gift of the late Mr. Hill, the educational society of the Northern Baptist convention promised to give a similar sum provided that the college raise \$200,000. This sum was raised by private subscriptions during the last two years.

In addition to the \$300,000 thus assured, an unknown donor in Portland adds \$20,000 cash, another prominent Baptist of the state gives \$10,000 and a third gives \$5,000, which raises the fund to \$325,000.

Dr. Myron W. Haynes has had charge of the fund work in this campaign, and it has been through his indefatigable efforts that it has met with such remarkable success. The money has been raised entirely in Oregon, Washington and Idaho, with a larger portion of it subscribed by members of the church in Oregon.

INSPECT PLANTS THAT ARE SHIPPED BY MAIL

Under a law passed by congress March 4, 1915, some states are making arrangements for the terminal inspection of all mail shipments of plant products, except vegetable and flower seeds, entering the state California, Arizona, and Montana have already established such mail inspection services under the federal law.

AUTOS COLLIDE.

A Ford delivery car of the U. S. Laundry Co. and another Ford driven by E. G. Bleker collided on the Milwaukee Highway at the intersection of Monroe last Monday evening. Both cars were damaged considerably but neither driver was injured. The delivery car had made a delivery at the Graton Hotel and was making the turn in the street when the Bleker car crashed into him. The slippery pavement following the rain was directly the cause, both autos skidding before they could be brought to a standstill.

AGRICULTURAL PRODUCTS ARE NOW ON FREE LIST

CATTLE, WOOL, BEEF, CORN AND MUTTON ADMITTED FREE OF DUTY BY TARIFF LAW.

The Democratic tariff law transferred most of the farmer's products from the dutiable to the free list.

Of 22 agricultural products 17 were placed on the free list. The others were reduced 60 per cent. Cattle, wool, beef, mutton, corn, eggs, milk and cream were made free.

During the fiscal year 1914, or rather in the ten months peace period of the Wilson administration preceding the war, compared with a corresponding period during the preceding Republican year, the imports of certain agricultural products increased from \$72,694,000 to \$174,622,000. In three months during the fiscal year 1914, according to the Democratic boast, the imports of cattle increased from 112,000 head to 341,000; corn from 253,000 bushels to 4,450,000 bushels; meat from 865,000 pounds to 35,000,000 pounds.

Wheat declined in prices 15 cents a bushel; corn declined 10 cents. The prices of cattle and sheep went down. The cost of living at the same time went up or, at least, remained the same for the consumer.

The Corn Products company and the Standard Starch company bought much of the imported corn. Most of the beef was imported from the South American plants of the Chicago packers. In the same fashion the revenue lost to the country on free sugar went to the sugar refiners not to the people.

Will this situation be restored after the war?

WHAT'S THE REASON?

Many Oregon City People in Poor Health Without Knowing the Cause.

There are scores of people who drag out a miserable existence without realizing the cause of their suffering. Day after day they are racked with backache and headache; suffer from nervousness, dizziness, weakness, languor and depression. Perhaps the kidneys have fallen behind in their work of filtering the blood and that may be the root of the trouble. Look to your kidneys, assist them in their work—give them the help they need.

You can use no more highly recommended remedy than Doan's Kidney Pills—endorsed by people all over the country and by your neighbors in Oregon City.

Mrs. A. R. Reddaway, 116 S. Center St., Oregon City, says: "My back ached most all the time. It was so weak and sore that when I got down to do anything, it was all I could do to straighten up. Sharp catches shot through my kidneys and for a minute I could hardly move, as they were so severe. My kidneys also acted too freely. I felt tired all the time and could hardly drag myself around. After I had been taking Doan's Kidney Pills awhile, my back felt stronger and my kidneys acted more regularly."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mrs. Reddaway had. Foster-Milburn Co. Props., Buffalo, N. Y. (Adv.)

HIS FATE A MYSTERY.

No One Knows Just How the Youngest of the "Signers" Died.

By a strange trick of fate Thomas Lynch, the youngest "signer" of the Declaration of Independence, was also the first one of these men to die.

Lynch was born in Prince George parish, S. C., Aug. 5, 1740. He was only twenty-six when the congress declared the independence of the colonies. Ill health compelled him to leave congress soon afterward, and near the close of 1770 he embarked on a vessel, intending to go to Europe for the benefit of his health.

The ship on which he sailed was never heard of afterward, and the fate of the youngest of the "signers" remains a mystery. It is supposed, of course, that the ship sank and that Lynch and all on board were drowned, but there were rumors that it was blown out of its course in a storm and wrecked on a lonely island of the West Indies and that some of the passengers and crew were saved.

Thomas Lynch was educated in England and was the son of a wealthy South Carolina planter.—New York World.

WASHINGTON IS CLOSE.

SEATTLE, Wash., Nov. 7.—Reports from all over the state indicate that a heavy vote has been cast, with President Wilson maintaining a small but consistent lead over the Republican nominee, Charles Evans Hughes.

Henry McBride, Republican candidate for governor, has a good lead over his Democratic opponent, Governor Lister, and United States Senator Poindexter is ahead of George Turner.

ON THE FARM AND GARDEN

PREPARE THE VEGETABLE GARDEN FOR WINTER

PARSNIPS AND CELERY MAY BE LEFT IN GROUND; OTHER CROPS GATHERED.

Aside from cleaning up the garden, there are other fall activities that the home gardener should carry on both before and after the advent of frost. Important among these is the storage of root crops. No care need be taken of parsnips, as they are best left in the ground to be gathered as needed. Celery, also, may be left out of doors. It should be banked high with earth and the tops covered with straw. Spinach may be left out of doors, and this also should be covered with straw.

Carrots and beets, however, should be taken up after the first frost and stored in a frost-proof cellar. If the only available cellar has a furnace in it, the roots should be stored in a portion of the underground room which is partitioned off and provided with a window. This should be kept open except in unusually cold weather. If the cellar is normally damp the beets and carrot may be spread out like potatoes. In dry cellars, however, it is best to pack the roots in sand, which may be kept slightly moist.

When there is danger of severe frost and fully grown but green tomatoes still on the vines and those partially ripened should be picked and placed in a row on the ground or lawn and covered with straw or leaves. This covering should be removed while the sun is shining if the temperature is not too low. It should be replaced again each night and kept on during inclement weather. Under such treatment the fruits will gradually ripen.

After frost, but before freezing sets in, cabbage, cauliflower, and Brussels sprouts should be removed from the garden. The cabbage heads should be cut and either stored uncovered in the cellar or placed on grass out of doors and covered with straw. Cauliflower and Brussels sprouts plants may be lifted and set closely in boxes of soil in the cellar, being preserved in this way for many weeks.

Preparation for winter should not begin for the strawberry bed until after the ground has frozen hard. The plants should then be covered over with straw, manure rich in straw, pine needles and small boughs, or tree leaves. Leaves are less desirable than the other mulching materials, since they pack very closely.

Those portions of the garden not occupied by perennial or winter crops should be spaded or plowed and left rough during the winter. The heavier the soil of the garden the more advantageous will such treatment prove.

LITERARY HOBBIES.

Even Railway Time Tables May Make Interesting Reading.

Rudyard Kipling finds both pleasure and profit in reading the dictionary, and this habit largely accounts for his wonderful knowledge of words, his rich vocabulary and his newness in the use of words. He does not confine himself to the ordinary dictionary. He likes to look at a slang edition or a dictionary of a dialect.

There is a certain noble lord who loves nothing better than turning over the pages of Bradshaw, spying out all the ways to anywhere, all the branch lines and noting the railway stations with queer names. He is an adept in all railway lore and is often referred to by his brother peers when a moot point is raised about the iron roads of the world, for his knowledge extends from Charing Cross to New York via Yokohama.

But probably the queerest literary hobby was a certain doctor's predilection for reading an old file of the London Times. He said it made him better contented with things at present to see how things were muddled up twenty years ago. He found politicians just as caustic, and yet he concluded: "Here we are, much as usual!"—London Answers.

GOVERNMENT STUDIES VARIETIES OF ALFALFA

NINE FAIRLY DISTINCTIVE COMMERCIAL STRAINS—ADAPTED TO VARYING CLIMATES

The increased interest in varieties of alfalfa and the need for the farmer to know whether a certain variety is suitable for his neighborhood have led to the publication of Farmers' Bulletin 757, Commercial Varieties of Alfalfa. The authors, R. A. Oakley and H. L. Westover, of the bureau of plant industry, discuss in detail the characteristics and habits of the nine fairly distinctive commercial strains of alfalfa now recognized in the United States, together with their adaptation to climatic conditions. Some give the best results in the north and northwest, while others succeed only in the south and southwest where the winters are mild. Wherever possible, the authors have indicated methods of distinguishing the seed of one variety from another.

"Common alfalfa" is a term that is used to include all of the alfalfas that Baltic, the Canadian variegated, and sand lucern. With the exception of sand lucern, they have been found more resistant to cold than other commercial varieties or strains and are therefore recommended for sections where winterkilling occurs frequently.

Peruvian alfalfa is not resistant to severe cold and can be grown successfully only where the winter temperature is comparatively mild, as in the southern and southwestern states. Under favorable conditions it outyields any other commercial strain.

are not clearly of hybrid origin or that do not have distinct and uniform varietal characteristics, such as the Peruvian and Arabian varieties. Numerous strains are coming to be recognized in the "common" group. They are often designated by the geographic name of the locality where grown, as Kansas-grown alfalfa, Montana-grown alfalfa, and many others, or by some term descriptive of the conditions under which the crop has developed, such as dry-land alfalfa, irrigated alfalfa, and nonirrigated alfalfa.

Strains developed in the south usually produce larger yields than those developed in the northern states, but they are less hardy. The "dry-land" alfalfa seed offered on the market has so far failed to show any noticeable superiority in ability to resist drought over that grown with an abundance of moisture.

The commercial Turkestan alfalfa has been tested quite thoroughly in all parts of this country, and in nearly every case has proved inferior to American-grown strains.

The leading commercial strains of variegated alfalfa are the Grimm, the

WATERING TROUGHS MADE OF CONCRETE

PERMANENT KIND CHEAPER IN LONG RUN—FORMULA IS GIVEN.

Nothing contributes to the health and thrift of farm live stock more than an abundant supply of pure water. Realizing this, many farmers are building clean, sanitary and permanent watering troughs of concrete. As such troughs last indefinitely they are proving not only more satisfactory than other kinds of water troughs, but cheaper in the long run.

In making waterproof concrete such as is used in water troughs and tanks, it is best to use a very wet mixture. The formula commonly used is: One part cement, two parts sand and four of gravel. Add water until the mixture will pour off the shovel. On the present-day farm concrete has many uses. Fence posts, feeding floors and walls made of concrete will last indefinitely.

Use good materials—clean sand and gravel, with not more than 5 per cent of loam, clay or other foreign matter. Use a reliable brand of Portland cement, free from lumps.

Use clean water to mix. Place in forms within thirty minutes after mixing. Keep wet and allow to "cure" thirty days, protecting from the sun during the curing period.

SWEET POTATO STORAGE.

Sweet potatoes must be harvested and stored with the utmost care, say specialists of the department of agriculture, if their production is to prove profitable. Any bruising of the roots, either in the field or in storage, will greatly increase the percentage of loss. In storage the temperature at which the potatoes are kept is also an important factor in determining their keeping qualities.

Throughout most of the sweet-potato producing region the harvest will take place within the next six weeks or two months. Growers should be sure before digging that the roots are mature, and they should select a time when the ground is dry and the day bright. If frost nips the plants, the roots should be dug within the next few days; and if this is impossible, the dead plants should be cut off at the ground with a hoe so that in rotting they will not carry the decay to the roots.

A Bad Summer For Children.

There has been an unusual amount of dangerous sickness among children everywhere this summer. Extra precautions should be taken to keep the bowels open and regular and the liver active. Foley Cathartic Tablets are a fine and wholesome physic; cause no pain, nausea or griping. They relieve indigestion, sick headache, biliousness, sour stomach, bad breath or other condition caused by clogged bowels. Jones Drug Co.—Adv.

"Sudden pain from over-strain"

Every Housewife or Mother is ever under that Nervous Strain which so often results in Headaches, Dizzy Sensations, Faintness, Depression and other Nervous Disorders.

Dr. Miles' NERVINE

is Highly Recommended in Such Cases.

IF FIRST BOTTLE FAILS TO BENEFIT, YOUR MONEY WILL BE REFUNDED.

"I had become greatly run down and my nerves were in terrible condition. I had frequent headaches and became very weak. I was unable to do anything. I bought a bottle of Dr. Miles' Nervine. I soon began to feel better, my nerves were quipped. I recovered my strength, and have since recommended Dr. Miles' Nervine to many of my friends who have used it with satisfactory results." MRS. FRANCES WHITLOCK, 179 Broadway, Schenectady, N. Y.

And Still They Come
