

LORENE PARKER IS ELECTED AS AGENT

Women home demonstration agents have been appointed by the Oregon Agricultural college and the U. S. department of agriculture for seven districts of Oregon, composed of 18 counties. As rapidly as funds become available new appointments will be made to cover the entire state.

Miss Lorene Parker, of Oregon City's high school faculty, has been selected as agent for this district, comprised of Marion and Clackamas counties. She was born and reared on an Oregon farm, and has first-hand knowledge of the house-wife's problems. She is a graduate of home economics at O. A. C. and has since graduation been a teacher of domestic science at Oregon City. The year following graduation she was one of the two paid assistants maintained at the famous Panama Pacific O. A. C. lunch room in the Oregon building, having charge of purchasing supplies and planning menus. She has also had considerable experience in extension work.

The appointment of agents is authorized by the provision of the food emergency legislation. It is designed to obtain leaders to assist in the food conservation campaign that is counted on to create a patriotic desire to use the home-grown food and leave as much of the staples as possible for shipment to the nation and its allies.

The work is financed entirely from the funds appropriated to carry the measure into effect, with the provision that the districts served provide suitable office room for the agent. In counties maintaining agricultural agents the two sets of agents will occupy the same office. In other counties the communities are expected to aid in locating and to maintain office headquarters.

The demonstration work of the agents will be directed by the Oregon Agricultural college extension service.

He Felt Like Ninety

Nothing will make a person feel old quicker than disordered kidneys, for when they are not working properly the whole system is infected with poisons that cause aches and pains in all parts of the body. A. W. Moor-gan, Angola, La., writes: "Oh, I suffered with pain in my back. I am 43 years old, but I felt like a man 90 years old. Since I took Foley Kidney Pills I feel like I did when I was 21." They tone up and strengthen the kidneys, and promptly relieve annoying bladder troubles.—Jones Drug Co.

NEW RECTOR ARRIVES

Successor to Rev. T. J. Williams Takes Charge of St. Paul's

With their two daughters and three sons, the Rev. and Mrs. C. H. L. Chandler have arrived in Oregon City, where the former will enter immediately upon his work as rector of St. Paul's Episcopal church, from which the Rev. T. J. Williams resigned some time ago. Mr. Chandler will hold his first service on Sunday. For several years the new St. Paul's rector was employed in the offices of the O. W. R. & N. Co., in Portland and has an acquaintance in the state. It was while in Portland that he studied in a preliminary way for the ministry. Later he attended and graduated from the Church Divinity School at San Mateo, Cal., and was curate in a church in that city. He comes to Oregon City from San Louis Obispo, Cal., where he was for several years rector of the St. Stephen's church. Several events are being planned for the family as soon as it becomes settled, including an informal reception to be tendered by the men of the parish.

Cider—a By-Product

Among the many influences of the war that will affect farmers until world peace again reigns will be the unusual demand for large amounts of what have in the past been considered as by-products of various kinds. One of these is cider and other fruit juices for making vinegar and condensed flavorings.

The great hosts of army and navy men on the war fronts and aboard fighting and transport vessels will need plenty of seasoning and relish materials to help give variety to the canned and processed foods forming so large a part of army and navy fare. It is none too soon for fruit growers to get ready to meet this demand by planning to make use of all fruits unsuitable for marketing in fresh, canned, or dried form, as cider for fruit syrups and vinegar.

Heretofore, in every important fruit-growing district, the quantity of fruit suitable for cider-making which has been allowed to decay, has been enormous. Ofttimes the returns for cider when ready to mar-

ket were hardly sufficient to cover the expense account. But now the situation has materially changed, and even small quantities of unsalable fruit worked up into good quality cider with hand-power or small power outfits will help to supply our own fighting men and allies with appetizing variety, and will keep without spoiling in any climate.

Cider-making machinery has been perfected to a degree that now enables the making of a high-quality product with a great saving of time and labor, and where the quantity of fruit warrants the larger sized equipments the work can be almost entirely done by power machinery.

Another important aid to fruit-growing, incident to cider-making, is the opportunity to destroy myriads of insect pests contained in unsalable fruit. The worm-laden fruit can be sorted out and fed to stock.—Exchange.

FIRST QUOTA CALLED

Each County Will Send 3 on Mobilization Order

Orders for the immediate mobilization of the first 5 per cent of Oregon's draft quota to the national army, to leave for American Lake September 5, were issued to all county boards Tuesday night from the office of Adjutant General White.

The call will summon but 38 men in all, due to the alacrity with which Oregon's youth enlisted and no county will furnish more than three men to the first 5 per cent. The boards were instructed that cooks were pre-eminently desired on the first levy and that men of military experience were preferred.

The original orders, which were countermanded last week, were for the mobilization of 30 per cent September 5. Owing to an anticipation of congested traffic at that time, orders were received for the mobilization of the lesser number. The second mobilization will call 40 per cent of the quota on September 19, and the third will assemble 40 per cent on October 3. The remaining 15 per cent will be called when practicable.

Routing for the first and second calls are complete and the county boards have been instructed to send the men selected directly to American Lake.

OUTING PARTY BACK

Editor Breaks a Rib and a Spring. All in One Vacation Trip

A broken rib, an automobile spring with the same complaint, and several fine strings of fish were the tokens which C. W. Robey, editor of the Courier, brought back from his summer vacation spent in the vicinity of Mount Hood. Mr. and Mrs. Robey, their little daughter, Maxine; Mr. and Mrs. W. J. Wilson and Miss Gladys Robey of McMinnville, were the members of the outing party. In their machines the party went to Clackamas Lake and, finding things there less pleasant than they had been pictured, returned to the vicinity of Government Camp and spent a week at fishing.

Going to Clackamas Lake Mr. Robey broke a spring on his automobile and improvised one from a sturdy fir limb. In camp Mr. Robey collided with another limb of the same degree of sturdiness, with the result that he has a painfully fractured rib. Photographic verification of the fish stories brought back by Mr. Robey and Mr. Wilson make the log of their trip more interesting.

EIGHT ARE FINED

Judge Sievers Exact Toll From Many Arrested Speeders

The weekly cleanup of charges against speeders in Justice of the Peace John N. Sievers' court Monday brought \$57.50 into the coffers of the county after the judge had listened to and fined eight men guilty of fast driving. Carl Riser of Wilamette, paid \$10 for fast driving, as did H. J. Graves of this city. Graves was riding a motorcycle. E. Dun-guey of this city also paid \$10 for speeding his motorcycle. Fines of \$5 each were assessed against E. B. Leonard of Portland, J. P. Erickson of Clackamas, Joe Johansen of Portland, and Gilbert Hansen of this city. A. Neiss of Portland paid a fine of \$7.50.

Letters in Probate

Mary E. Lantz Tuesday morning filed petition for letters of administration in the estate of her late husband, Milo F. Lantz, who was accidentally killed near Molalla on August 16. The estate consists chiefly of livestock, farm machinery and crops, according to the petition. Mrs. Lantz is the only beneficiary. Lantz was killed when a large hay fork fell upon him and one of the tines pierced his heart.

DAIRY LORE.

Put the whole herd, young and old. There is hard cash in kind attention. With culling crops and some grain the dairy herd should maintain a profitable production. There can be no profit in letting the herd run down when the pastures become dry or short. Keep the calves in clean quarters out of the hot sun. People seem willing to pay any price for good butter, but poor butter is hard to sell at any price. There is always going to be a place in the market for good, pure dairy products. Butter, cream, milk and cheese will always be in demand if the quality is right.

SUMMER CARE OF SHEEP.

Flock Should Be Watched For Disease and Have Abundant Pasture.

The present world shortage of wool and meat should be an incentive to give the flock of sheep extra care and attention during the present year, says the Pennsylvania State college. The pasture should be arranged for the greatest supply of feed. The lambs that are to go to market in the fall should produce the maximum amount of fleece and meat at the least expenditure of money.

As soon as the weather is warm enough the entire flock of sheep should be dipped twice at an interval of two weeks. Any of the standard disinfectants may be used for this purpose. This treatment will rid the sheep of external parasites.

The flock should have plenty of good pasture during the entire summer. The lambs should have a separate feeding place, where they can be supplied with a small amount of grain. When the lambs are weaned they should be placed on a clean pasture, where no sheep have been pastured during the season, or on a field seeded to some forage crop. Clean pasture is necessary to avoid trouble with internal parasites.

If the sheep show signs of becoming sluggish they should be treated for stomach worms. The gasoline treatment is the simplest. Keep the sheep off feed for twelve hours. Give each lamb a dose of five ounces of cow's milk, half a teaspoonful of gasoline and a tablespoonful of raw linseed oil. Double the dose for mature sheep. The treatment should be repeated three consecutive days.

Save every lamb dropped. Make certain that all have been docked. Castrate all male lambs that are not to be kept as rams for breeding. Save all the good ewe lambs for breeders as they will be in demand during the next few years. Market all the surplus lambs as soon as they are ready to be marketed. Take care of the breeding flock so that it will be in condition in the fall for breeding. Keep a check on the breeding to make certain that all the ewes are bred.

CARE OF MILK CANS.

To Prevent Rusting They Should Be Carefully Dried After Washing.

Cans should first be rinsed with cold water, then scrubbed with hot water and washing powder, then rinsed in clean hot water and finally sterilized with steam or rinsed with boiling hot water, says Hoard's Dairymen. They should then be inverted and allowed to dry in a place free from dirt and in the sunshine, if possible. It would be very desirable also if there were some method of drying out the cans with a hot air blast, for it has been found that leaving a little of the wash water in the can is one of the most effective means of seeding the milk with undesirable bacteria, as well as being an excellent method of causing the can to rust.

After a can has started to rust the best method of procedure is to scour off as much of the rust as possible, and then follow the proper methods of washing and drying the can. It is understood, of course, that the cans should be protected from the weather and not allowed to stand out of doors or in damp, dark rooms. The same method of control for this should be followed as for caring for the other tin dishes in the house.

Water For Hogs.

It is important that a plentiful supply of clear water be kept before the hogs at all times. Hogs that have the range of a cornfield do not go to the trough at the same time to drink, as they do in dry lot feeding; consequently the occasional watering, as frequently practiced in dry lot feeding, will not suffice for hogs feeding in the cornfield. More complete digestion takes place and more economical gain results when hogs receive all the water they care to consume than when the supply is limited and irregular.

Lime For Poultry.

If your poultry range is gravelly or has gravelly areas the birds can pick up enough lime for shell and bone making, but if it is clayey it is well to supply grit and pounded oyster shells the year around. A pound of coarsely ground oyster shell is said to contain enough lime for about seven dozen eggs.

Protect Horses From Flies.

Disinfecting the stables with coal tar dips will go a long way toward protecting the horses from flies. Clean the stables every day in hot weather.—Farm Journal.

FREE PUBLICITY

One of the ills that is a Thorn on the Newspaper Bush

The circus press agent who used to enter the editor's sanctum, and lay on the desk a column notice of the coming show with a pair of passes with the statement that he might use the article to help fill up the paper may have passed away, but the advertising agency that believes it is entitled to \$5.00 worth of free space for every dollar it pays for display

REMEMBER HOME PAPER

Soldier Boys Reminded by Y. M. C. A. Secretaries to Write Home

San Francisco, Aug. 23, 1917.

Dear Mr. Editor:

The executive secretary of the national war work council of the Y. M. C. A., F. A. McCarl, desires to express through me, his sincere appreciation of the splendid co-operation which the newspapers have given the work of the army and navy Y. M. C. A. in the matter of publicity.

With the calling out of men to make up the new national army, there

has been placed upon the association a great burden to care for these men, to supply them with reading matter, recreation, entertainment and instruction. It is the splendid, enthusiastic whole-souled support of the press which has contributed so largely to the success of this work.

Army Y. M. C. A. secretaries are being instructed to remind the soldier boys of the old home paper and to tell them how welcome a letter from them would be and how eagerly it would be read in the community. This is the manner in which we are trying to repay you editors for what you have done to help this movement. We appreciate your support, and we will try in our meagre way to be of some service to you.

Very sincerely yours,
F. F. RUNYAN.

Kvinge Asks Divorce

Because he alleges that she kept unusually late hours, was not careful of her associates and was absent from their home for continued periods, Ben Kvinge Tuesday morning filed suit in Judge Campbell's court for divorce from Lillian May Kvinge. The couple was married at Portland, on July 29, 1911. Her actions caused Kvinge to leave his wife after August 23 of this year, according to the complaint. Kvinge charges that his wife continually kept company with other men and the straw that broke the camel's back was when he found her in company with a stranger at Columbia beach on August 23.

\$1.00 DOZ.

Normandy Val. Edges and Sets; Net Top Edges, Beading Top, Plain Top and Van Dyke Points; all brand-new goods attractively priced.

19c THE YARD

White and cream Shadow Laces—18-inch Flouncings and 34-in. allovers in a fine line of pretty patterns to close at this sale at far below real worth.

PREPAREDNESS LECTURE

THIS war is awakening men to the truth about a lot of things besides Preparedness—and chewing tobacco is one of them. Soldiers are strong for W-B Cut and the facts are right before you. These shreds are all tobacco, no gummy sweetening—rich tobacco—more saps in the leaf than in ordinary tobacco—a long shot. That's why it's so satisfying and so economical—a little bit goes a long way.

Made by WEYMAN-BRUTON COMPANY, 1107 Broadway, New York City
