

BIG BEN

There's
Success
in
His
Wake

BIG BEN at 6 a. m. for the big man of business—who knows the luxury of ample time—who's up before duty insists. Try Big Ben in the business of living. Set him a little ahead.

"Click," goes the time-clock on sleep—you dart across the room—nudge him quiet—smile—With brain brain afresh and mind alert you're on good terms with a new day.

Puts an edge on your razor and appetite—and time to use both—brings a whistle that starts in the tub and puckers again at each lull in your work.

To get your salary up, a year of Big Ben get-ups is better than a pull with the Boss. You'll like Big Ben face to face. He's seven inches tall, spunky, neighborly—downright good all through. He rings two ways—ten half-minute calls or steadily for five minutes.

LAND FOR THE RETURNING HEROES SERIOUS QUESTION

In his annual report, made public December 11th, Franklin K. Lane, Secretary of the Interior, explains in considerable detail his plan for providing work and land for returning soldiers. In this connection, he states that a systematic development of our 200,000,000 acres of arid, swampy, and cut-over land can be made to provide immediate jobs for discharged soldiers and thus prevent the labor markets from being demoralized by a surplus of labor, and that furthermore many Americans "will be affixed permanently to agricultural occupation, and great areas of land now neglected and valueless will be brought into use."

Continuing, the Secretary says: "As an immediate program we should first offer an opportunity upon our present irrigation projects for all who wish work at clearing and leveling the land not now cultivated, but for which water is available, or to which water can be brought under the present irrigation system, and that such tracts shall be developed under an appropriate land-settlement plan. This we can do at once and meet whatever labor problem may be immediate."

"As a second step I would urge an appropriation for one or more of the largest irrigation schemes for which surveys are in an advanced state. Concurrently it would seem to me wise to undertake the draining of the most promising project—government-owned land preferred, but, if privately owned, the land to be bought at an appraisal made by the Farm Loan board and subject to the approval of the Department of Agriculture."

"There is an alternative method of dealing with private lands which already has the approval of Congress, being incorporated in the reclamation act. Under this a private owner agrees to sell his land to whoever gets the water right at an appraised price as a condition precedent to our undertaking the construction of irrigation work. Under such a plan there would be no difficulty whatever in securing control of any sized bodies of cut-over or swamp lands that might be desired; the government would not buy the land, but the owner would look to the new settler for the price, and take it on such terms as the government itself would exact for its own expenditure upon the land. Supplementing this there should be an opportunity given for the cooperation of all the states upon limited tracts which would be dealt with under state control and subject to the closest federal supervision."

"After a soldier has returned to his home, if his old position is not open and he wishes to turn to an independent life, there would be laid before him a number of projects which the government had under-

taken in the different sections of the country. Let us assume no more than three, one an irrigation scheme, another a drainage project, a third the development of a body of cut-over lands. The one would need to have great dams constructed to impound and divert waters, a hydro-electric plant, miles of canal and tunnel, perhaps, thousands of acres to be cleared and leveled, fenced and broken. This would mean years of work at good wages, work in the open under housing conditions that would seem palatial to the soldier of the trench, and at the end a piece of land on which would be erected a house and barn, a farm home in a group of farm homes. For this he must pay. But already he has received wages out of which he can have saved the necessary first installment on his place of 10 or 15 percent. The balance with interest he can pay in 40 yearly installments, or earlier if he can."

It is estimated by Mr. Lane, that approximately one half of our troops now in Europe came from farms, and would probably be glad to take up agricultural work after their return to this country. Mr. Lane also suggests that in selling farms to these men, the government should limit the size and impose such restrictions as would prevent individuals from aggregating the land into large estates.

With reference to the matter of the cost of carrying out his plans in this matter, the Secretary says:

"Would it be unreasonable to ask that we spend in the next two years on these veterans of the great war as much as it cost us to conduct that war for a single week? Would a people who gave out of hand, but of a noble sense of charity, to quasi-public organizations, \$500,000,000 for the entertainment and care of these boys hesitate to buy the bonds of this country for a like amount to provide peace work, home work, and homes for these same boys?"

Secretary Lane's views on this subject are certainly enlightening and seem to be worthy of prompt and careful attention by Congress, for if, as he suggests, it is practicable, at a cost which would not be prohibitive, to redeem many millions of acres of lands now utterly useless, and thus provide farm land for our returning soldiers, and if it is practicable to start such projects at once so that these soldiers can take up immediately upon their discharge and at reasonable wages, the work of redeeming these lands and can continue such work until the lands are ready for their occupancy, there should certainly be no delay in putting the plan of redeeming these lands into effect. We are not, however, in accord with the Secretary's suggestion that the land so redeemed should be divided into millions of small farms with their wasteful multiplicity of fences, small individual dwellings, barns and outhouses of various kinds, farm wagons, machines, implements,

etc., since such plan would cause an enormous and useless waste of labor and material. It is, of course, desirable to prevent any single individual from monopolizing a large area of this land, after it has been redeemed, and there may be no serious objection to the granting of title to small sections of the land to individual soldiers; however, it would seem that, instead of carrying out the wasteful plan of constructing millions of diminutive farm buildings of all kinds, of purchasing tens of millions of unnecessary farm implements, appliances, etc., and of erecting hundreds of millions of miles of useless fencing, provision should be made in connection with this land-redemption project, for cooperative management, community warehouses and homes, proper sanitation, education, entertainment and other modern welfare and conservation measures which will serve to make the lives of these prospective farmers healthful, contented and worth-while in every way. This would seem to be much better than to duplicate the unfortunate conditions of isolation, waste, insanitation, illiteracy, selfishness and discontent, which are now so common throughout those sections of the country where small, individualistic, unprofitable farming methods prevail and from which sections millions of discontented people have for years been flocking to our cities.

It is of course very important for the welfare of the country to stimulate agriculture, and moreover, it will be a splendid thing if large numbers of our returning soldiers can be immediately employed on and eventually give title to these now useless lands, but unless they are established on these lands under conditions which provide fully for their health, happiness and prosperity and thus insure permanent agriculturists and will not sell and abandon their farms as soon as the novelty of rural life wears off, it would certainly not be worth while to incur the heavy expenditures which will be necessary in order to carry out Secretary Lane's plans. If then, this extensive land-reclamation scheme is to be undertaken, there should go hand in hand with it, in the interest of the welfare of the country as well as of the soldiers for whose benefit it is proposed, a comprehensive plan which will insure, through cooperative and other conservation methods, permanently beneficial results to all concerned.

Physician Explains Who Should Take Nuxated Iron

Practical Advice on How to Help Build Up
Great Strength, Energy and Endurance.

Commenting on the use of Nuxated Iron as a tonic, strength and blood builder by over three million people annually, Dr. James Francis Sullivan, formerly physician of Bellevue Hospital (Out-door Dept.), New York, and The Westchester County Hospital, said: "Lack of iron in the blood not only makes a man a physical and mental weakling, nervous, irritable, easily fatigued, but it utterly robs him of that virile force, that stamina and strength of will which are so necessary to success and power in every walk of life."

man and woman who wants to possess perfect health, great physical endurance and a strong, keen mentality. Dr. Sullivan tells how to increase the iron in our blood and thereby gain greater physical and mental power, brighter intellects and better health.

But in my opinion you can't make strong, vigorous, successful, sturdy iron men, and healthy, rosy-cheeked women by feeding them on metallic iron. The old forms of metallic iron must go through a digestive process to transform them into organic iron—Nuxated Iron—before they are ready to be taken up and assimilated by the human system. Notwithstanding all that has been said and written on this subject by well-known physicians, thousands of people still insist on dosing themselves with metallic iron, simply, I suppose, because it costs a few cents less. I strongly advise readers in all cases to get a physician's prescription for organic iron—Nuxated Iron—before they are ready to be taken up and assimilated by the human system. Notwithstanding all that has been said and written on this subject by well-known physicians, thousands of people still insist on dosing themselves with metallic iron, simply, I suppose, because it costs a few cents less. I strongly advise readers in all cases to get a physician's prescription for organic iron—Nuxated Iron—before they are ready to be taken up and assimilated by the human system.

It may also transform a beautiful, sweet-tempered woman into one who is cross, nervous and irritable. I have strongly emphasized the great necessity of physicians making blood examinations of their weak, anemic, run-down patients. Thousands of persons go on year after year suffering from physical weakness and a highly nervous condition due to lack of sufficient iron in their red blood corpuscles without ever realizing the real and true cause of their trouble. Without iron in your blood your red corpuscles pass through the body something like corn through an old mill with rollers so wide apart that the mill can't grind.

For want of iron you may be an old man at thirty, dull of intellect, poor in memory, nervous, irritable and all "run down," while at 50 or 60 with plenty of iron in your blood you may still be young in feeling, full of life, your whole being brimming over with vim and energy."

The accompanying article of Dr. Sullivan should be carefully read by every

STUFFED UP WITH "A BAD COLD?"

Get busy with a bottle of
Dr. King's New Discovery
at once

Coughs, colds and bronchial attacks—they are all likely to result in dangerous after-effects unless checked in time. And how effectively and quickly Dr. King's New Discovery helps to do the checking work! Inflamed, irritated membranes are soothed, the mucous phlegm loosened freely, and quiet, restful sleep follows.

All druggists have it. Sold since 1869

Constipation Emacipation

No more lazy bowels, yellow complexion, sick headache, indigestion, embarrassing breath, when you use as a corrective Dr. King's New Life Pills. They systematize the system and keep he world looking cheerful.

Poor Cows are Good Eaters

Feed cost of poor producing cows in Oregon is but little lower than that of high producing cows. It cost but \$11.36 less to feed the cows on test which produced 300 pounds of fat than those which produced 400 pounds. The cost for cows yielding 200 pounds of fat was only \$6.78 less than for those yielding 300 pounds. Hence the difference in the total feed cost between cows producing 200 pounds and 400 pounds of fat was \$18.64. Yet the value of their product, which cost but little less than the product of the good producers, was worth only about half as much. The entire difference in cost of feed for cows producing 100 pounds and 400 pounds of fat was \$30.09.

Worth \$50.00 a Bottle

Wm. Barnes, San Antonio, Tex., writes: "Foley's Honey and Tar is the best cough remedy in the world. It has been worth \$50.00 a bottle to me. I had 'the flu' followed by pneumonia, which left me weak, with a persistent cough. I needed rest and sleep, which I was unable to get. Some one advised Foley's Honey and Tar. I began taking it that very night. Before bed time I noticed relief, and that night had a sound sleep and perfect night's rest, the first since the beginning of the 'flu.' I have completely recovered and do not cough at all. It cost me only \$1.20 to cure that obstinate cough with Foley's Honey and Tar. Let all who read this letter try Foley's."—Jones Drug Co.

Water Systems

will be found on hundreds of farms and suburban places in Oregon and the Northwest. They have been sold here by us for years. They give satisfaction. WHY? Because they are made up of good units such as

Stover
Gasoline
Engines

Myers
Pumps and
Cylinders
and Tanks
that are
made right
and
thoroughly
tested

and we make proper installation, using men for this purpose who have had years of experience. Besides all this, if anything isn't right we try to make it right. When you install a water system you put in something that is to serve you for many years. Better get a good system made up of good units, put in by a responsible concern with experienced men and in the right way.

In short
