

In Every Home

Where there are children
there ought to be a

Victor Victrola

THE love of music is born in every one of us, and is important that children should have the opportunity to hear and enjoy the right kind of music—good music played and sung by the best musicians.

This instrument is one of the most popular Victrolas. It has all the patented exclusive features of the highest priced Victrolas being only smaller in size. There is storage space for 100 records. The price with 24 selections—your own choice—is \$84.00

We want you to let us put this instrument in your home for a free trial. We want you to use it for five days, then if you say so we will take it away without any expense to you whatever. If you want to keep it—pay us \$9 cash and the balance in several monthly payments.

Other Victrolas \$15 to \$250

COUNTY AND CITY LOCALS

Mrs. John Gilbert of Seattle, Wash., an aunt of the Rev. E. E. Gilbert of the Methodist church of Oregon City, was a visitor at the Gilbert home on Tuesday. Mrs. Gilbert is moving from Seattle to Stayton, Ore., where she has purchased property. The Rev. Mr. Gilbert and family took their guest upon a trip over the Columbia river highway.

Richard Schwab, who died in New York on Monday was a brother to Edward Schwab, secretary-treasurer of the Oregon City Manufacturing company. The remains will be sent to Portland for burial.

Optometry means eye service. George A. McLain, locomotive engineer, has returned to the employment of the Northern Pacific railway at Jamestown, N. D., after spending the winter months with his family on their Mount Pleasant farm. Mrs. McLain went as far as Seattle with her husband and will remain there for some time visiting friends.

Charles Bitzer of Newport has returned to the coast after an extended visit in Oregon City, where he spent many years of his life. Mr. Bitzer is connected with a hotel at Newport.

Mrs. S. V. Francis has returned to her home here following a visit at Chehalis, Wash., where she was called by the illness of her mother, Mr. X. Myers. Mrs. Myers has not recovered.

Robert Edmunds is visiting in Oregon City for a few days while he thaws a bit of the chill of Alaska from his bones. He is operating a homestead near Juneau.

J. F. Jones, deputy sealer of weights and measures for the state, was in Oregon City this week transacting business in connection with his office.

Optometry means eye service. Miss Elmira Clark of Forest Grove returned to her home following a week-end visit with friends at Gladstone.

Miss Alberta Stetson, who has been visiting friends at Gladstone, has returned to her home at Hood River.

Mr. and Mrs. William Money and their daughter, Marjorie, have gone to Ocean Falls, B. C., where Mr. Money is employed in the paper mills. Miss Marjorie, who worked in the Portland office of the Crown-Willamette Paper Co., is understood to have accepted a position in the offices in Canada.

ARMORED VESSELS

How the Great Steel Plates That
Protect Them Are Made.

A SEVERE TEST OF SKILL.

The Various Processes That Produce the Conflicting Properties Necessary in These Modern Projectile Resisting Warship Jackets.

Only armored warships could live in a naval battle with modern big gun projectiles in use, and hence the making of armor plate has become a science. The manufacture of armor plate has developed considerably in recent years, and in no branch of the steel industry is there greater opportunity for engineering and mechanical skill, coupled with metallurgical knowledge, than in the operations of forging and rolling, followed by the exact heat treatment essential to produce the almost conflicting properties necessary in modern armor.

The plate must be hard, glass hard, to resist penetration by heavy projectiles moving at tremendous velocities, yet tough and fibrous enough to take up the momentum without cracking or distortion. Mechanically, then, the plate must have an extremely hard surface and a fibrous backing. These requirements were attained in part by the old compound armor. Molten steel was poured on to a wrought iron plate and cooled. The slab was then reheated, forged and rolled to the required dimensions. If the operations were successfully carried out the line of demarcation was scarcely visible.

Recently a modification of this process was introduced to cheapen and render less tedious the production of armor. A layer of hard steel was poured into a cooled mold, the underside quickly setting. On the still fluid or pasty surface a thick layer of soft steel was poured. By careful manipulation the union of the surfaces was almost complete, and it was impossible to detect the break in composition on viewing the fractured section. This method of manufacture was undoubtedly an improvement on the old compound method.

The increasing size, velocity and hardness of modern armor piercing projectiles have necessitated the introduction of the modern armor. The process of manufacture essentially consists in case hardening to a depth of about two inches the surface of a homogeneous tough nickel chrome steel. Special air or self hardening nickel and more complex steels are used for lighter armor, gun shields and cast armor structures.

The steel is made in Siemens furnaces and carefully cast into ingots up to eighty tons in weight. These ingots are then slabs under powerful hydraulic presses (18,000 tons) or rolled direct to the required dimensions, depending on the power of the mills and appliances. During the rolling operation, which lasts about an hour, the slab is reversed and inverted to attain uniformity of working, and scale is removed by wood fagots and water jets. After rolling the plate is usually quenched.

The next operation is that of case hardening, and in this two plates are put face to face, separated by a layer of the carburizing reagent if it be solid, or if gaseous hydrocarbons be used the plates are slightly separated, to allow free passage for the hardening gases, by bricks arranged in rows. The plates are maintained at redness in a furnace for three weeks and withdrawn after the hardening carbon has penetrated to the required depth. The plates are thus carburized and so made capable of being hardened, but they are not yet actually hard. At this stage all holes are drilled and plugged, and any bending or machining necessary is carried out.

From this point onward the treatments differ. Some makers insist on heating and quenching in oil or water to remove any coarse structure that may have been formed during the long annealing while carburizing. The next essential operation is that of hardening, and this is usually carried out in one of two ways. Either the plate is uniformly heated to the hardening temperature and quenched by a series of water jets playing on the upper surface with sufficient force to prevent the formation of steam or by a process known as "differential quenching," by which the carburized surface is heated to a temperature from which it will harden and the under side kept well below, so attaining a gradual fall in temperature from the top to the bottom. The whole plate is then immersed in water, the hotter surface alone being hardened, while the back is toughened. Further mechanical operations can be carried out only by grinding or cutting with oxyacetylene, as the plate has now undergone the treatment conferring maximum hardness.

In resume, it will be noted that there are three distinct operations in modern methods of manufacture—the mechanical working of the plate to the required dimensions, the carburization of the surface, quenching the carburized surface to harden it. These operations call for exact manipulation, supervision and control, for the skill of the engineer and metallurgist may be put to the severest tests, not of the laboratory or the testing machine, but out in the "gray mists," when failure of a unit may imperil the safety and cohesion of the whole.—Chambers' Journal.

One that confounds good and evil is an enemy to good.—Burke.

Baptist church on Tuesday evening for their regular session and the feed which they occasionally enjoy. The guild now has 80 members.

Mrs. Holton Brings Suit
Mrs. Ollie Zoe Holton Tuesday filed suit for divorce in Judge Campbell's court, alleging desertion in the complaint against Albert Holton. She charges that her husband left their home more than a year ago.

LOYAL BRANCH MEETS

Gladstone Hears Senator Dimick and Fine Musical Program

The auditorium of the Gladstone school was too small to accommodate the crowd Friday night at the patriotic meeting held under the auspices of the Loyalty league. Senator Walter A. Dimick made the chief address of the evening and aroused his audience with stirring patriotic eloquence. Senator Dimick emphasized the duty of each citizen toward the practice of patriotism, calling attention to the value of individual patriotism as compared with that which is confined to the mass. The part of the average German-American in the present crisis proves the loyalty of these good citizens, Senator Dimick pointed out. Captain Kerstetter addressed the meeting upon patriotic subjects and Mildred Bowman of the Girls' Honor guard made a fine talk. The musical program was furnished by the Gladstone band. Miss Marie Friedrich and Mrs. Carl Moore rendered patriotic solos and the Gladstone mixed quartet also sang. The Boy Scouts of Gladstone led in singing "America" and "The Star Spangled Banner." The Rev. Mr. Broomfield led the meeting in prayer.

BOOKLET NEARLY READY

Live Wires Produce Pamphlet Telling of Available Power
The Live Wires of the Commercial club, acting under authority and with money of the Commercial club have prepared a pamphlet setting forth the extent, value and usefulness of available electrical energy from the falls of the Willamette at Oregon City and are about ready to send the booklet to press.

The pamphlet will contain only material relative to the power situation, giving as much data about its quantity and cost as possible and telling what local industrial plants are doing with it. The object of the booklet is to interest manufacturers in Oregon City and Clackamas county as an industrial center. The booklet will show that developed and undeveloped water power in Clackamas county is almost equal to the total developed power of Niagara falls. Thomas A. Burke, E. C. Brownlee and A. C. Howland are a committee in charge of the publication.

KNOW THE CAR'S LOAD.

Method by Which a Motorist Can Get the Best Tire Service.

"Perhaps the greatest and most important thing a motorist should know about a car is its weight with the average load carried," says an expert. "By knowing the weight of his car when loaded ready to run the motorist is in a position to regulate his tires so that they not only act as the best shock absorber obtainable, but are fit to offset any injuries which may come from over or under inflation.

"With the weight of the car known when preparing for a trip which includes passengers it is very easy for the motorist to regulate his air pressure in the tires so that they will run with the least injury to themselves. This foresight will also prevent a break in the side walls caused by an overload.

"With the weight of your car, plus the weight of gasoline, water and extra tires, with the weight of the passengers added, you have the total running weight of your car.

"For a quick way of determining what air pressure you will carry in your tires if you have no regular table of inflation the following table is suggested:

"For three-inch tires divide the weight of the load by thirty-two.
"For three and one-half-inch tires divide the weight by forty.
"For four-inch tires divide the weight of the load by forty-eight.
"For four and one-half-inch tires divide the weight of the load by fifty-six.
"For five-inch tires divide the weight of the load by sixty-four.
"For five and one-half-inch tires divide the weight of the load by seventy-two.

"To further illustrate the working out of the above table suppose your car weighed 2,580 pounds and you are using four-inch tires. From the above we find that for four-inch tires the weight of the load should be divided by forty-eight. This will give you sixty pounds air pressure, which should be carried in your tires. The tire mileage will be greatly increased if the motorist will regulate his air pressure by the load he carries."—New York Sun.

CHARM OF FLOWERS.

Gardening is a Hobby That Becomes Akin to a Passion.

Barring the equally ancient and alluring pastime of going a-fishing, no hobby has a stronger grip on its devotees than gardening. At 4 o'clock of a summer morning Celia Thaxter could be found at work in her radiant little island plot, a sister in spirit to old Chaucer when on his knees in the grass at dawn to watch a daisy open.

And these were not exceptional, but extraordinary, cases of devotion. They were merely typical exponents of the true gardener's passion.

Nor is this intense enthusiasm fleeting. Not in the least. It is not more transient than the bibliomaniac's passion, no more evanescent than the collector's zeal, which only death can quench. It is no sudden, youthful fervor. Indeed, it is rarely found in youth at the storm and stress period, while it may be observed to be strongest in those for whom the days of wild enthusiasm are over. The bachelor clergyman or the quietest of spinsters, for whom other passion is nonexistent, will yet lavish on their gardens enough devotion to have won the heart of the most obtuse of persons, enough tenderness to have sufficed for the mothering of a dozen little ones. A garden is the world of the recluse, the passion of the lone man or woman, the diversion of statesmen, the recreation of poets and artists of all ages, except perhaps musicians, who may be over-careful of their hands.—Frances Duncan in Scribner's.

Spring Clean-up Sale at Busch's

Broken lots, discontinued lines, odd pieces and remnants at less than half their regular value.

Remnants of Wall Paper

Beautiful patterns. Values to 25c will go at 5c per double roll.

Scrim and Lace Curtains

Half pairs only, values to \$5.00 per pair, will go at 50c per half pair.

Remnants of Curtain Goods

Scrim net, values to 25c will go at 12½c per yard.

Remnants of Matting

Up to 10 yards in the piece, values to 35c, will go at 15c per yard.

Full Size Cotton Mattress

40 pounds. Imperial side stitched, roll edge, fancy art-ticking. Guaranteed not to lump or get hard.

Price this week only \$8.50

Ingrain Carpet

36 inches wide, can be used on both sides. Beautiful patterns to be sold this week at only 80c per yard.

Ingrain or Granite Stair Carpet 26 inches wide, only 38c per yard.

FRANK BUSCH

CLACKAMAS COUNTY'S LEADING FURNITURE AND HARDWARE DEALER

CONTEST IS ENDED

Clackamas County Fails to Score in Road Bond Essays

Prizes for essays submitted in the contest showing the advantages to be derived from the \$6,000,000 road bond issue have been awarded. The committee of judges, R. G. Callvert of the Oregonian, Paul Chamberlin of the Telegram and Ralph Watson of the Journal, all of Portland, says that an exceptionally high standard was found in the manuscript submitted, particularly by the pupils of the grammar and high schools. Many essays were rejected because they exceeded the 200-word limit.

The contest was divided into four classes. Class A was to show the benefits to be derived by counties; Class B was to deal with the benefits to the state; Class C dealt with the same subject as Class B, but was limited to high school students, and Class D also has the same subject as Class B, but contestants were limited to pupils of the grammar grades. None of the prizes were awarded in Clackamas county.

Is Mr. Spence Consistent?

Four years ago C. E. Spence, master of the state Grange, advocated the Grange bill which proposed the issuance of 6 per cent bonds by counties for construction of permanent roads, the bonds to be paid by a direct tax levy.

Mr. Spence is now vigorously opposing the road bond bill which proposes issuing \$6,000,000 25-year 4 per cent bonds for hard-surfaced roads. A direct tax is not imposed for the retirement of these bonds. Ample revenue to pay the interest and retire the bonds at maturity is already provided by law from the increased automobile licenses and the existing one-fourth mill state road tax which has been a fixed tax against all property in the state for the last four years. In other words, the bill to be passed upon by the voters at the June election will not increase the general taxes of the individual.

If Mr. Spence was right in 1912 he is wrong now.

The Questions They Ask a Boy

(Cleveland Plain Dealer)
Whenever I come home at night, An' I've been in a little fight—

The folks have found it out, some way,
An' each one has a word to say;

The first one is my sister Gert;
She squeals: "How dreadful! Are you hurt?"

Well, I ain't hurt, as Mother knows,
But she says: "Did you tear your clothes?"

Then Grandma says: "To fight is sin,
And that's how wicked men begin."

But Father waits till they're all done,
An' says: "Well, did you lick him, Son?"

"LEND A HAND"

Secretary Putnam Would Advance a Worthy Cause

Salem, Ore.—Mr. Editor:—I am writing to you as a newspaper man, asking your help for a little newspaper which is published in Oregon under peculiar difficulties and which, it seems to me, deserves the encouragement of our state press.

"Lend A Hand" is the paper in question. It is edited, printed and

published monthly by the inmates of the Oregon State Penitentiary.

The little magazine is doing good work. Inside the walls it helps make life worth living, recording incidents of interest and offering prisoners opportunity to express themselves. On the "outside" it performs a useful function in telling people about prison happenings and prison hopes.

The subscription rate is \$1.00 per year. The men who create the magazine want to make it a little larger and better. They can do this if the income increases, and subscriptions are the only revenue.

No one makes a cent from the publication; it simply tries to be self-supporting and there is no profit in it for anybody.

This letter is to ask if you are willing to "lend a hand." If you are, won't you run a little story about the magazine, telling your readers what it is and asking that some of them send in subscriptions, which should be addressed to "Lend A Hand," box 1, route 6, Salem, Oregon?

Fraternally,
G. P. PUTNAM.

TWICE PROVEN

If you suffer backache, sleepless nights, tired dull days and distressing urinary disorders, don't experiment. Read this twice-told testimony. It's Oregon City evidence—doubly proven.

J. F. Montgomery, West Linn, says: "I had been troubled for some time by kidney and bladder annoyances. I had a dull ache in my back across my kidneys. I used one box of Doan's Kidney Pills, procured from Huntley Bros. Co.'s drug store and the pains soon left me and I found the kidney and bladder trouble was lessened." (Statement given April 4, 1913.)

On April 17, 1916, Mr. Montgomery said: "Doan's Kidney Pills never fail to do me good whenever I have occasion to take a kidney medicine."

Price 50c, at all dealers. Don't simply ask for a kidney remedy—get Doan's Kidney Pills—the same that Mr. Montgomery has twice publicly recommended. Foster-Milburn Co., Props., Buffalo, N. Y.

GUARD IS BUSY

Girls Will Sell Paper on Saturday to Crown-Willamette Mills

This week's program for the Girls' Honor guard was replete with activity and much of the labor of the young women was devoted to the collection of waste paper for sale at the first monthly paper day on next Saturday. The Crown-Willamette Paper company has agreed to buy 30 or 40 tons of waste paper and the girls believe they will have at least that amount by Saturday. This week a delegation of young women canvassed the city thoroughly gathering bundles of paper from homes and a common sight was several young women in an open automobile truck gathering and handling bundles of all sizes.

On Tuesday evening the young women attended the meeting of the Red Cross society, at which Dr. Ralph C. Matson, of the British medical reserve, lectured and showed a collection of war pictures. Miss C. Pratt, leader of the Honor guard, is in charge of the membership campaign and had the names of scores of members to add to the lists on Thursday evening.

R. L. Holman, Leading Undertaker, Fifth and Main St.; Telephones: Pacific 415-J; Home B-18.

CITY GETS PERMIT

State Engineer Grants Oregon City Right to Develop 887 H. P.

One hundred and five permits to appropriate water and 10 permits to construct reservoirs, including the irrigation of land aggregating 15,778 acres, the development of 2,007 horsepower, and water supply for seven municipalities, at an estimated cost of construction totalling \$366,191, were issued by State Engineer John H. Lewis during the first quarter of the year 1917.

In Marion County 2 permits were issued, as follows: to C. E. Taylor of Stayton, for the development of 205 horsepower from the North Santiam river for generating electricity; to the city of Silverton for a municipal water supply, from Abiqua creek. It is understood that the permit issued to the city of Silverton is for an additional water supply for that city, and that the plant is practically completed.

One permit was issued in Clackamas county to the city of Oregon City to develop 887 horsepower from the Willamette river for pumping water for the Oregon City water works.

Divorce Decrees Signed

Judge Campbell Tuesday signed divorce decrees separating Mrs. Eva Marks from Joseph Marks and Mrs. Catherine Yerex from I. A. Yerex. In the former case Mrs. Marks was granted custody of seven minor children.
